Derivation and test of an effective lattice theory for finite density

Wednesday, 19 February 2014 09:30 (30 minutes)

We briefly review the derivation of an effective Polyakov Loop theory for finite density Lattice QCD and discuss recent developments. As a further test of the effective theory, we compute several observables numerically and compare with results from full (3+1)d simulations.

Presenter: Dr LANGELE, Jens (ETH Zuerich)
