

Software interface PANDA – HESR (EPICS – WinCC OA)

PANDA DCS Layers

EPICS <-> WinCC OA via DIM (?!)

DIM - Distributed Information Management System

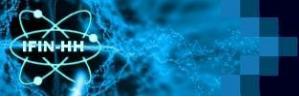

- Client/Server communication system;
- Developed by DELPHI experiment (CERN) in the 90's;
- Latest release 20r15 (01/09/2015).

PVSS-DIM toolkit

- Adapter between PVSS DataPoints and DIM services;
- Latest release 20r8 (22.01.2015);
- Ready for WinCC OA 3.11 SP1 (Windows/Linux).

EPICS-DIM interface

- caDIMInterface (GSI- H.Brand 2006);
- Latest release (2010 ?) by P. Zumbruch (GSI);
- **Unsuccessful runtime on Epics 3.14.12 – more support needed**

EPICS <-> WinCC OA via TCP socket (?!)

TCP socket

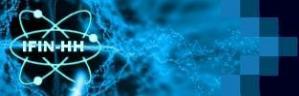

- IP address:Port;
- Client/Server communication.

WinCC OA API TCP driver

- TCP communication protocol;
- TCP String to PVSS DataPoint conversion;
- Needs some fine-tuning “to talk” with EPICS 3.14.12 on RHEL 6 flavors.

EPICS asynDriver

- `drvAsynIPPortConfigure` – TCP Client driver;
- `drvAsynIPServerPort` – TCP Server driver;
- `testIPServer` example.

EPICS <-> WinCC OA via TCP socket (?!)

TCP socket

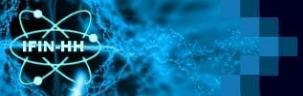

- IP address:Port;
- Client/Server communication.

WinCC OA API TCP driver

- TCP communication protocol;
- TCP String to PVSS DataPoint conversion;
- Needs some fine-tuning “to talk” with EPICS 3.14.12 on RHEL 6 flavors.

EPICS asynDriver

- drvAsynIPPortConfigure – TCP Client driver;
- drvAsynIPServerPort – TCP Server driver;
- Example testIPServer

EPICS <-> WinCC OA via TCP socket

Send-Receive strings via 2 TCP Sockets

Tasks :

- WinCC OA : custom code to convert from string to DataPoint elements types and vice versa;
- EPICS: custom code to convert from string to Process Variables and vice versa.

Tools :

WinCC Strings support: built-in functions => custom scripts to process the rx/tx strings

EPICS: sCalcout record processing,

EPICS <-> WinCC OA via TCP socket

Functional prototype @ IFIN-HH:
