

Summary and Conclusions

B. Vierkorn-Rudolph

Opportunities to strengthen common science projects

- Utilise synergies where complementary capabilities exist
- Utilise synergies in technological and engineering know how /expertise on both sides
- Increase mobility of scientists between facilities and countries
- Increase mobility of students between Universities of both sides

Why should cooperation between Universities be increased?

- Large Scale Research Infrastructures need the cooperation with Universities to attract students to work at the RIs
- Universities can provide an extended base of expertise and scientific personnel
- RIs can assist Universities to increase the knowledge base in their countries
- RIs can contribute extensively to the education and training of students

How can the cooperation between Universities /RIs be increased?

- RIs have to convince students that they are places where excellent research can be done
- To assist cooperation
 - Summer schools
 - Graduate courses
 - Exchange programmesshould be set up or should be prolonged
