

# *Status of Muon Chamber geometry @CBM*

---

*Ekata Nandy  
for the CBM collaboration  
VECC, Kolkata*

*CBM India Meeting 2018, Falta, 15-17 Feb*

*Collaborators  
Dr. Partha Pratim Bhaduri  
Dr. Anna Senger  
Omveer Chaudhury*

# Outline

---

- *CBM Experimental setup.*
- *Muon detector system or Muon Chamber (MUCH).*
- *Different configurations of Muon Chamber*
- *Up gradation of Muon Chamber detector system and recent status MUCH geometry after Technical Design Report (TDR).*
- *To do list & summary.*

# CBM Experimental setup

- Upcoming *fixed target Experiment* at FAIR where heavy ions will be collided at  $E_{\text{lab}} = 4$  to 40 GeV/A.
- Maximum interaction rate at CBM  $\sim 10$  MHz.
- will make possible the precise measurement of *rare probes*.

# Muon Chamber design

## Specifications

- Detector angular coverage  $5.7^\circ - 25^\circ$
- Total absorber is sliced and detector chambers are placed in between absorbers.
- Distance between 2 absorbers is 30 cm, where 3 detector layers are placed with 10 cm distance between consecutive layer centers.
- MUCH cave starts at 125 cm from target.
- 1<sup>st</sup> absorber made of Graphite and rest are made of Iron.

## Modifications after TDR

- Beam pipe design has been changed
- shift of the position of MUCH cave
- Absorbers design have been modified
- 1<sup>st</sup> absorber shape modified
- Magnet shielding bars have been removed
- Investigation on 2<sup>nd</sup> station size have been done
- Investigation going on for 3<sup>rd</sup> & 4<sup>th</sup> station

# *Different configurations of MUCH*

*SIS100A (3 stations + 3 absorbers)*

*SIS100B (4 stations + 4 absorbers)*

*SIS100C (5 stations + 5 absorbers)*

*SIS300 (6 stations + 6 absorbers)*

*Thickness of absorbers as specified in TDR*

# Simulation tools

---

*CBM ROOT framework with FAIRSOFT & FAIRROOT*

*GEANT3 transport code*

*Event Generators : URQMD + PLUTO*

*URQMD – to generate background events*

*PLUTO – to generate dimuons from signal  
( $\rho$ ,  $\omega$ ,  $\phi$ ,  $J/\Psi \rightarrow \mu^+ \mu^-$ ).*

# (a) Modifications of beam pipe & shielding

## Results:

- Particle density has reduced
- Signal to background ratio & efficiency nearly same

| $\omega$ | Eff(%) | S/B  |
|----------|--------|------|
| Old geo  | 0.82   | 0.27 |
| New geo  | 0.81   | 0.28 |

## (b) Modification of Muon chamber design

Old

Modified

- MUCH cave position shifted by 5 cm
- Absorbers shape (except 1<sup>st</sup>) conical → parallelepiped.
- 1<sup>st</sup> absorber cylindrical+conical → biconical

|                |          | $\rho$ | $\omega$ | $\phi$ | $\eta$ | $\eta_D$ | $\omega_D$ |
|----------------|----------|--------|----------|--------|--------|----------|------------|
| Efficiency (%) | Old      | 0.73   | 0.79     | 1.16   | 0.39   | 0.16     | 0.27       |
|                | modified | 0.79   | 0.84     | 1.26   | 0.41   | 0.17     | 0.30       |
| S/B            | Old      | 0.008  | 0.29     | 0.014  | 0.01   | 0.005    | 0.007      |
|                | modified | 0.007  | 0.27     | 0.014  | 0.01   | 0.003    | 0.006      |

Results : No significant change in efficiency & S/B of LMVMs.

## (c) Modification of shape of MUCH 1<sup>st</sup> absorber

Conical + Conical

*Issue : Gap between magnet opening & 1<sup>st</sup> absorber subjects large radiation dose in outside detector electronics*

Trapezoid Parallelopiped

# (c) Modification of shape of MUCH 1<sup>st</sup> absorber

**Trapezoid    Parallelopiped**

**Point Density Distribution**

| (c)     | Eff(%) | S/B  |
|---------|--------|------|
| Old geo | 0.93   | 0.21 |
| New geo | 0.92   | 0.25 |

*Efficiency nearly same  
& S/B improved.*

**By Anna Senger**

**Neutron dose has reduced by a factor 6 or more**

**By Anna Senger**

## (d) Investigation on 2<sup>nd</sup> station size

$$R_{\text{out}} - R_{\text{in}} = 97 \text{ cm (default setup)}$$

$$= 90 \text{ cm (Modified setup)}$$

$$= 80 \text{ cm (Modified setup)}$$

*SIS100B (4 stations + 4 absorbers)*

| $\omega$ @<br>8 AGeV       | Standard<br>$R_{\text{out}} - R_{\text{in}}$<br>= 97 cm | $R_{\text{out}} - R_{\text{in}}$<br>= 90 cm | $R_{\text{out}} - R_{\text{in}}$<br>= 80 cm |
|----------------------------|---------------------------------------------------------|---------------------------------------------|---------------------------------------------|
| $\omega$<br>Efficiency (%) | 0.92                                                    | 0.92                                        | 0.85                                        |
| S/B                        | 0.25                                                    | 0.22                                        | 0.21                                        |

*SIS100C (5 stations + 5 absorbers)*

| $J/\psi$ @<br>25 AGeV      | Standard<br>SIS100C | $R_{\text{out}} - R_{\text{in}} =$<br>90 cm |
|----------------------------|---------------------|---------------------------------------------|
| $J/\psi$<br>Efficiency (%) | 4.90                | 4.81                                        |
| S/B                        | 5.66                | 5.96                                        |

## (e) Investigation on 3<sup>rd</sup> & 4<sup>th</sup> station for using RPC

8 AGeV central Au+ Au collision

| $\omega$     | Standard | Modified |
|--------------|----------|----------|
| Efficiency % | 1.02     | 1.01     |
| S/B          | 0.18     | 0.19     |

## *(e) Investigation on 3<sup>rd</sup> & 4<sup>th</sup> station for using RPC*

For 3<sup>rd</sup> station 1 module size is 122 cm x 178 cm

For 4<sup>th</sup> station 1 module size is 138 cm x 206 cm

# To do list

---

- Beam pipe design is not yet realistic.*
- Investigations on 2<sup>nd</sup> station size has been done & nearly finalized.*
- Suitable detector technology for 3<sup>rd</sup> & 4<sup>th</sup> station have to be determined.      RPC seems to be a possible option for that. R & D is going on for that.*
- Implementation of proper geometry is needed for RPC.*
- Whether strips or pads will be used that has to be decided.*
- RPC digitization has to be implemented in simulation*
- At the simulation level, performance needed to be checked with full implementation of detector response & tracking.*

*Thank You*
