

A detailed wireframe model of a particle accelerator, likely the FAIR complex. The model shows a large, roughly circular ring structure in the foreground, with various smaller structures, including straight sections and smaller rings, extending from it. The entire model is rendered in a light gray wireframe style, showing the complex geometry of the facility.

Mandatory Safety Inspection Process

M. Bai, GSI

Current working process

- Established
- Described in Betriebordnung as well as other documents
- Not yet in the process handbook
