

ESR Status September 18, 2019

- **bakeout finished, good vacuum in all sectors**
target section was and still is the worst section (5×10^{-11} mbar)
- **preparation of dry-run and storage ring mode operation**
some delay in preparation of power converter readiness (AEG)
remaining mechanical work is now planned after the dry run
EPS requires time for AEG commissioning (during dry run)
- **continuing discussions about operation of old 'device access'**
controlled components
