

## **Building a quantum enabled future**

*Ilana Wisby, OQC*

Abstract:

With four-qubit, OQC's device is the most advanced and the only commercially available quantum computer in the UK. Developing superconducting circuits and using a unique three-dimensional architecture that brings key componentry off-chip, OQC is able to build flexible and scalable solutions. Thanks to their forward-looking business approach, "build the core and partner with the best", OQC are focusing their work on concrete applications for quantum computing and are set to lead the quantum revolution to enable life-changing discoveries .
