

# Hypertriton @ A1 and Hyper Database

Philipp Eckert

A1, Institut für Kernphysik

JGU Mainz

05.11.2020

# Part I: Hypernuclear Physics @A1

Mass measurement via electron scattering:

$$M_{\text{HYP}} = \sqrt{M_{\text{ncl}}^2 + p_{\pi^-}^2} + \sqrt{M_{\pi^-}^2 + p_{\pi^-}^2}$$

# Hypernuclear Physics @A1 – 2014

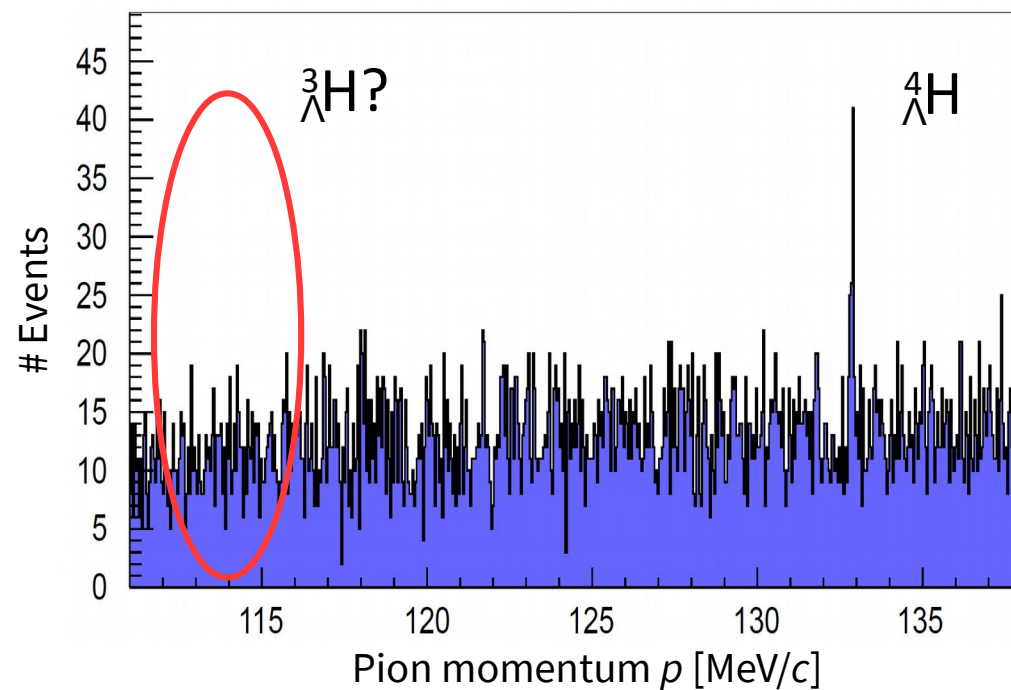

**2014:** decay of  ${}^3_{\Lambda}\text{H}$  not observed  
@ 125  $\mu\text{m}$   ${}^9\text{Be}$

**2021:** target with increased  
luminosity

lower mass number  
for less background?

5 cm  ${}^{6/7}\text{Li}$  target

F. Schulz 2015

## 5. Target Prototype – 2019

by P. Herrmann and P. Klag

# Target Alignment with Thermal Camera

alignment via theodolite difficult:

- long target length
- high reactivity of Li
- incoming beam @17°  
→ other solution needed

thermal camera:

- orientation via target itself
- observation of deposited heat by beam
- two cameras filming long side of target

cam module

spi to LVDS  
converter

LVDS back  
to spi

raspberry pi

by J. Geratz  
and P. Klag

# First Lithium Target Test @X1

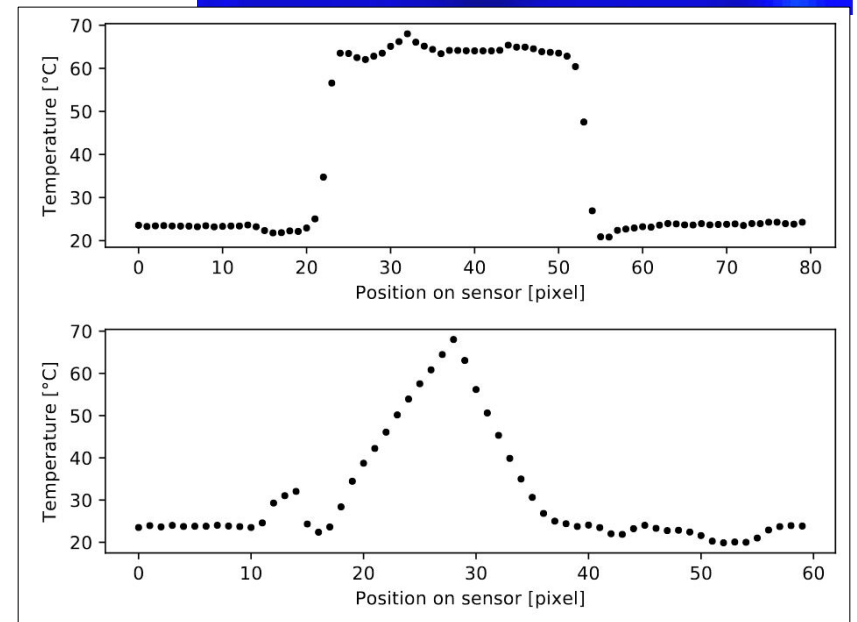

Temperature distribution of Lithium recorded with thermal cam and infra red optics

## Details:

- Beam Energy: 855 MeV
- Beam Current: 10  $\mu$ A
- Maximal Temperature:  $\sim 70^{\circ}\text{C}$

→ cam allows target alignment

→ successful cooling

# First Lithium Target Test @X1

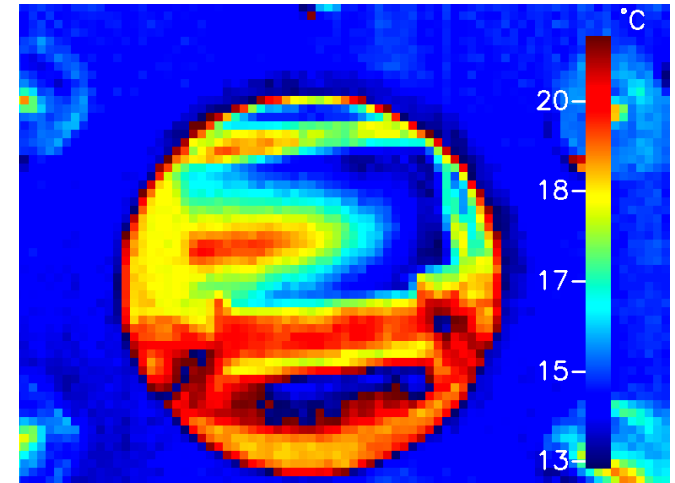

Temperature distribution of Lithium recorded with thermal cam and infra red optics

Details:

- Beam Energy: 855 MeV
- Beam Current: 10  $\mu$ A
- Maximal Temperature:  $\sim 70^\circ\text{C}$

→ cam allows target alignment

→ successful cooling

# Status of KAOS

# Status of KAOS

## Detectors:

### Scintillators:

- HV repaired
- PMTs checked

### Cherenkov Detector:

- PMTs checked
- **Status of aerogel?**

### Coincidence Logic:

- almost complete
- made logic plan
- **test run needed**

## Basics:

### Vacuum Chamber:

- equipment complete
- all pumps working

### Dipole Magnet:

- first low current test successful

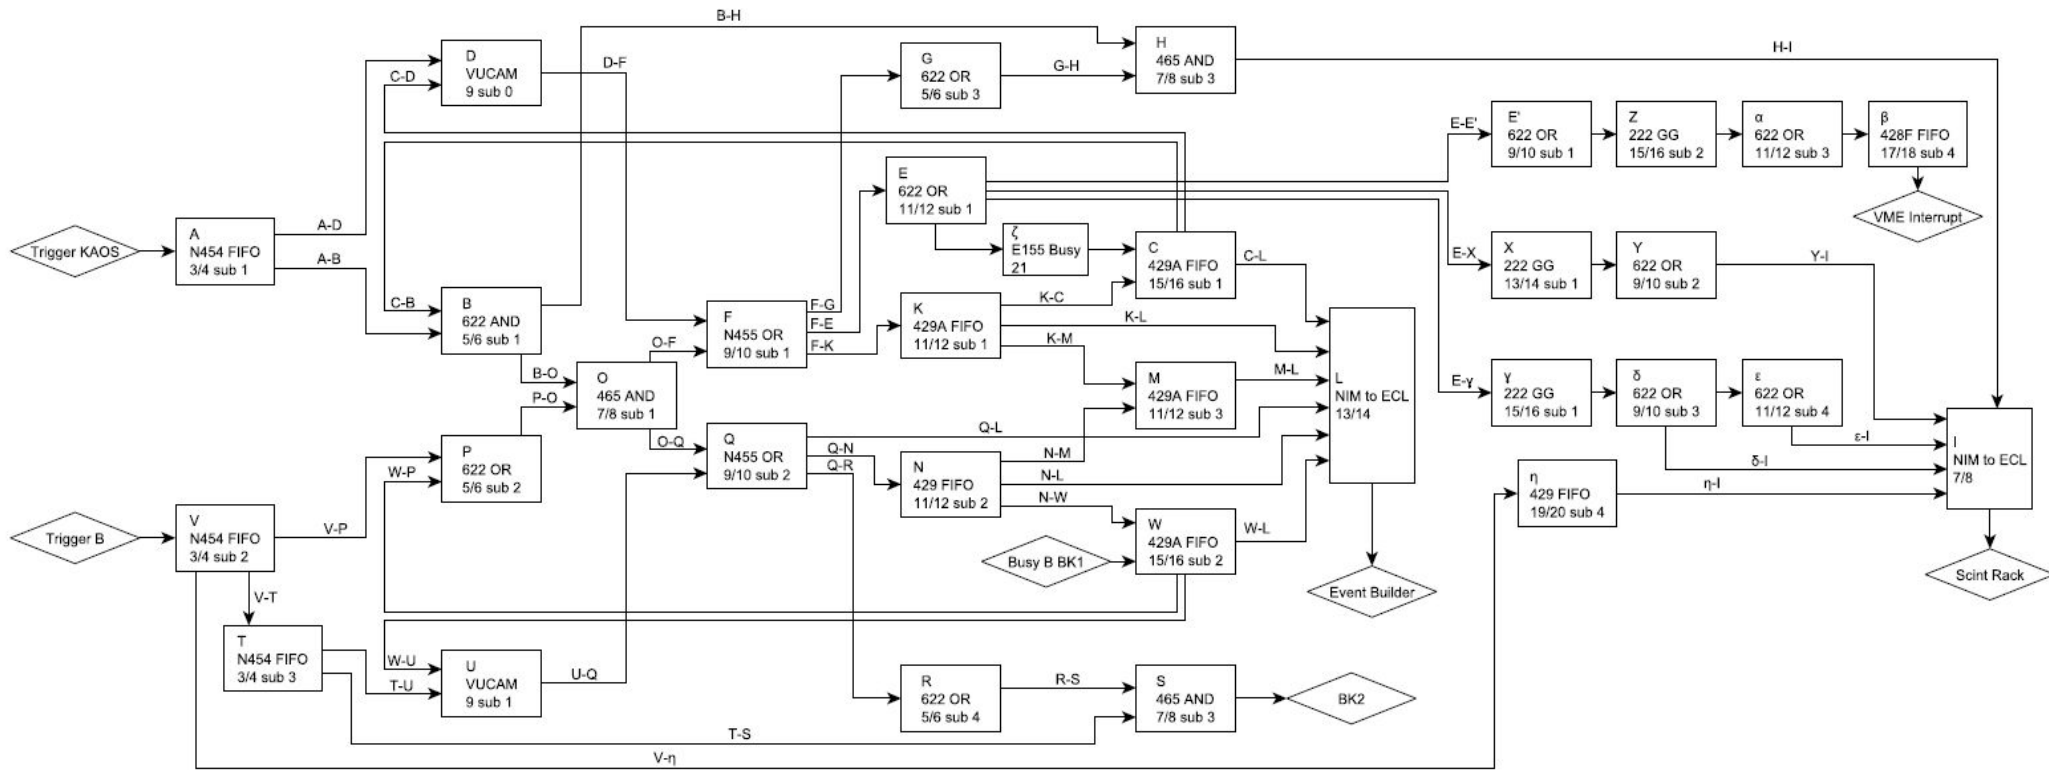

### Experiment Control:

- replaced frontend pc
- **complete software**

### Moving KAOS:

- **polish iron plates**
- **check equipment**

# KAOS Coincidence Logic

A: KAOS Trigger	F:	K:	P: B Trigger and Not Busy	U: B Scaler	Z:	ε:
B: KAOS Trigger and Not Busy	G:	L:	Q:	V: B Trigger	α:	ζ:
C: KAOS Busy	H:	M:	R:	W: B Busy	β:	η:
D: KAOS Scaler	I: start Scint. ADC/TDC readout	N:	S:	X:	γ:	
E: Interrupt	J: -	O: valid Trigger B and KAOS	T: B Trigger	Y:	δ:	

# Hypertriton – Future –

## Until end of 2020:

- finish experiment control:
  - ➔ control all devices, supplies, etc. from counting room
- start coincidence logic debugging
- design of special target chamber

## In 2021:

- Cherenkov detector
- check FPGA trigger
- first cosmics in spring?
- beamtime in summer?

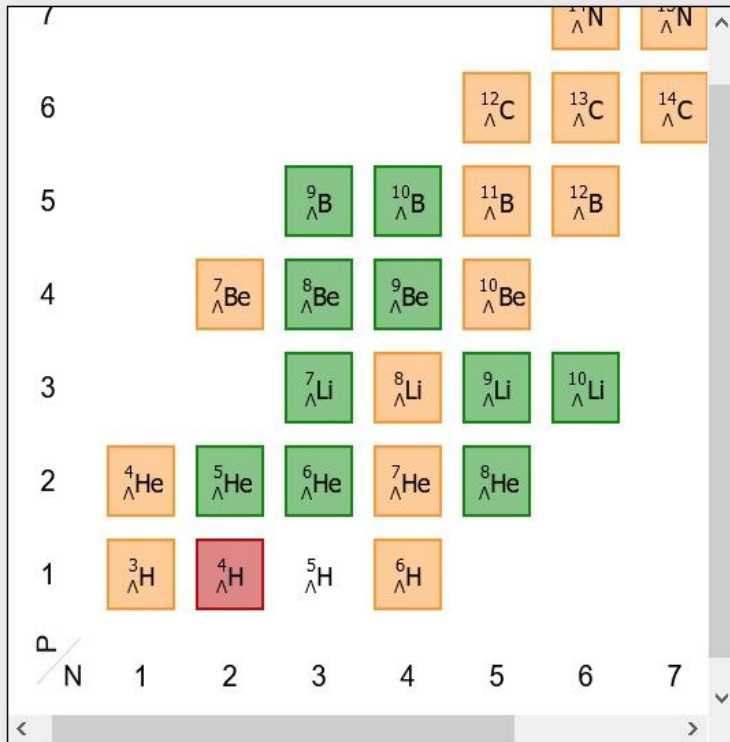

# Part II: Hypernuclear Database

## Idea:

- worldwide collection of hypernuclear data
- compute world averages (analogous to PDG)
- accessible to everyone via web
- interactive playing around with data
- offer download of plots, data, references
- **best activity during home office**
