

s393/land02 workshop 2011

Thursday, November 3, 2011 - Friday, November 4, 2011

GSI

Scientific Program

The first part of the workshop will focus mainly on the calibration of the various detectors used in s393. This can be then used as a basis for further discussions on the future direction of the analysis.

The second part will exclusively deal with the technical aspects involved in the data analysis within the land02 framework.

The participants of the land02 part are expected to have some basic knowledge of the various land02 tools. If this is not the case, you can obtain valuable information on the land02 framework from the dedicated web page:

land02 web page

or directly from the presentations of the previous land02 workshop:

First land02 workshop
