

MCP Front End Electronics Characterization

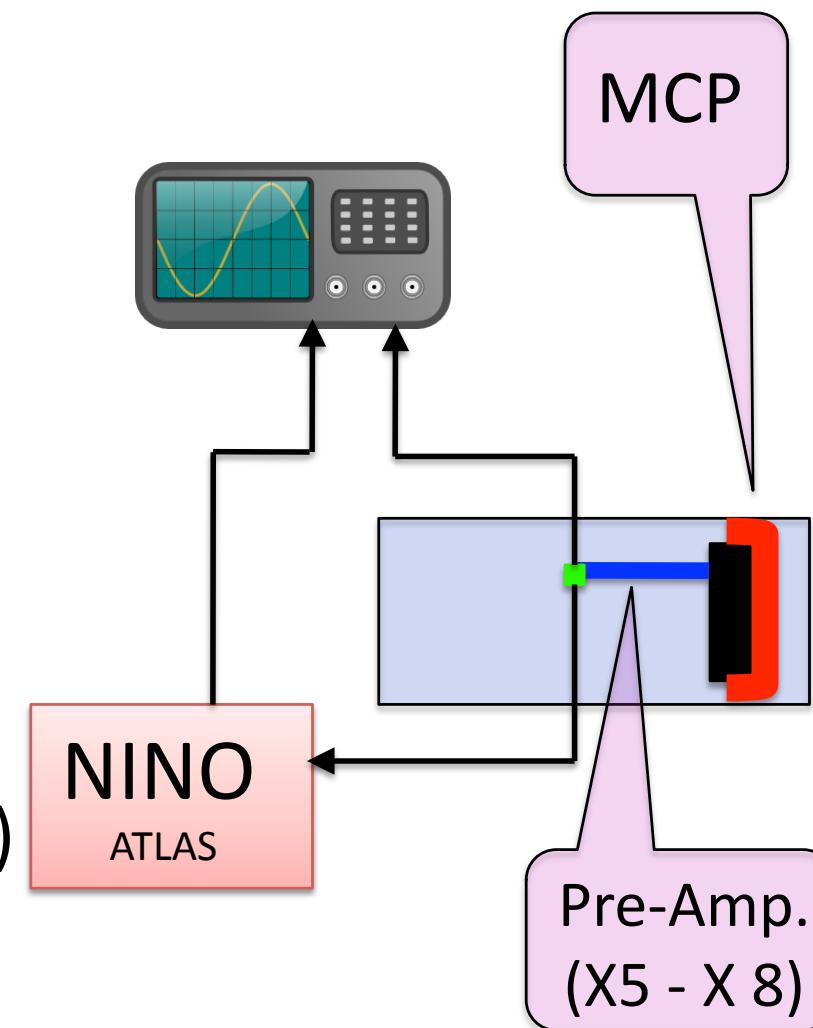

Matteo Cardinali on behalf of Mainz group

Index

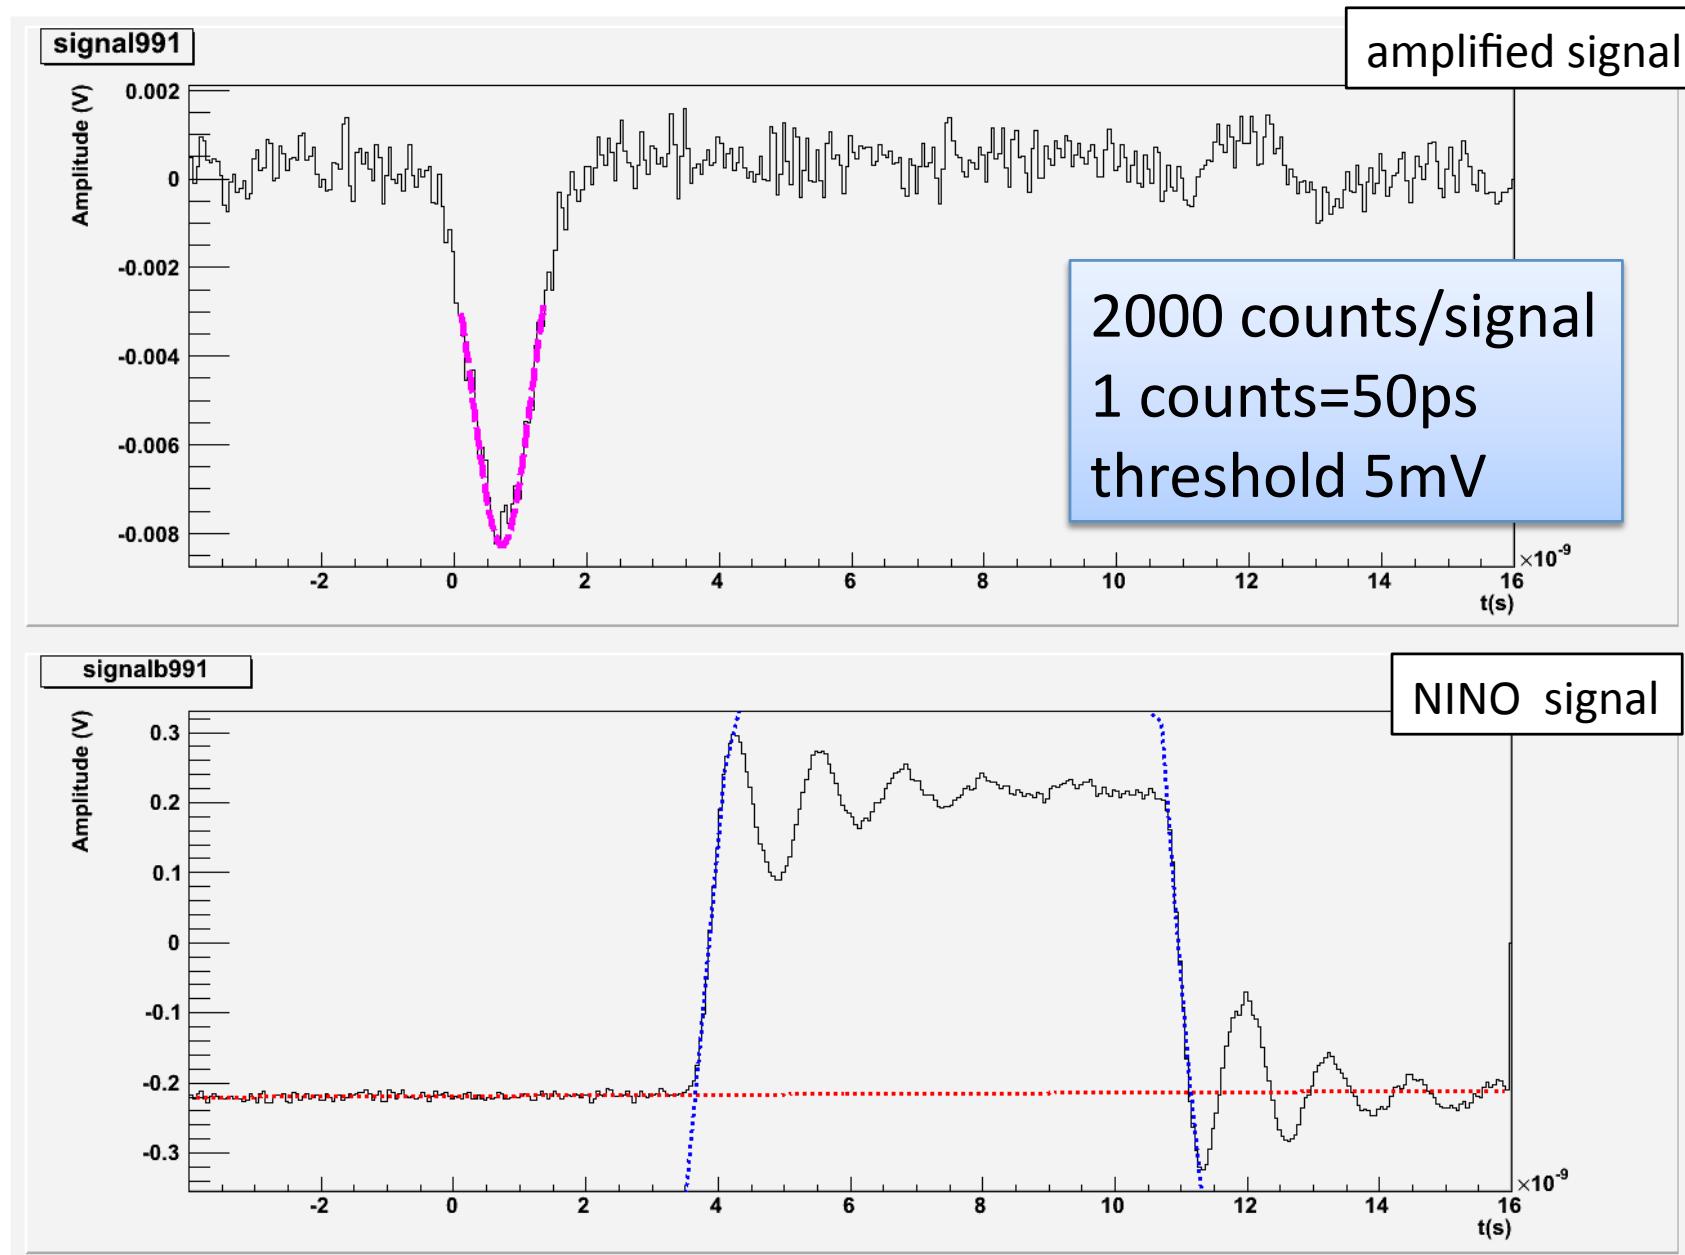

- Study of the MCP(Burle xp85012) FEE response:
 - dark noise
 - beam test @ MAMI
- Feasibility of Time-over-Threshold (NINO board)
 - time walk correction
 - stability under different conditions (bias level, pixel)
 - accuracy
- Outlook

Setup for dark noise study

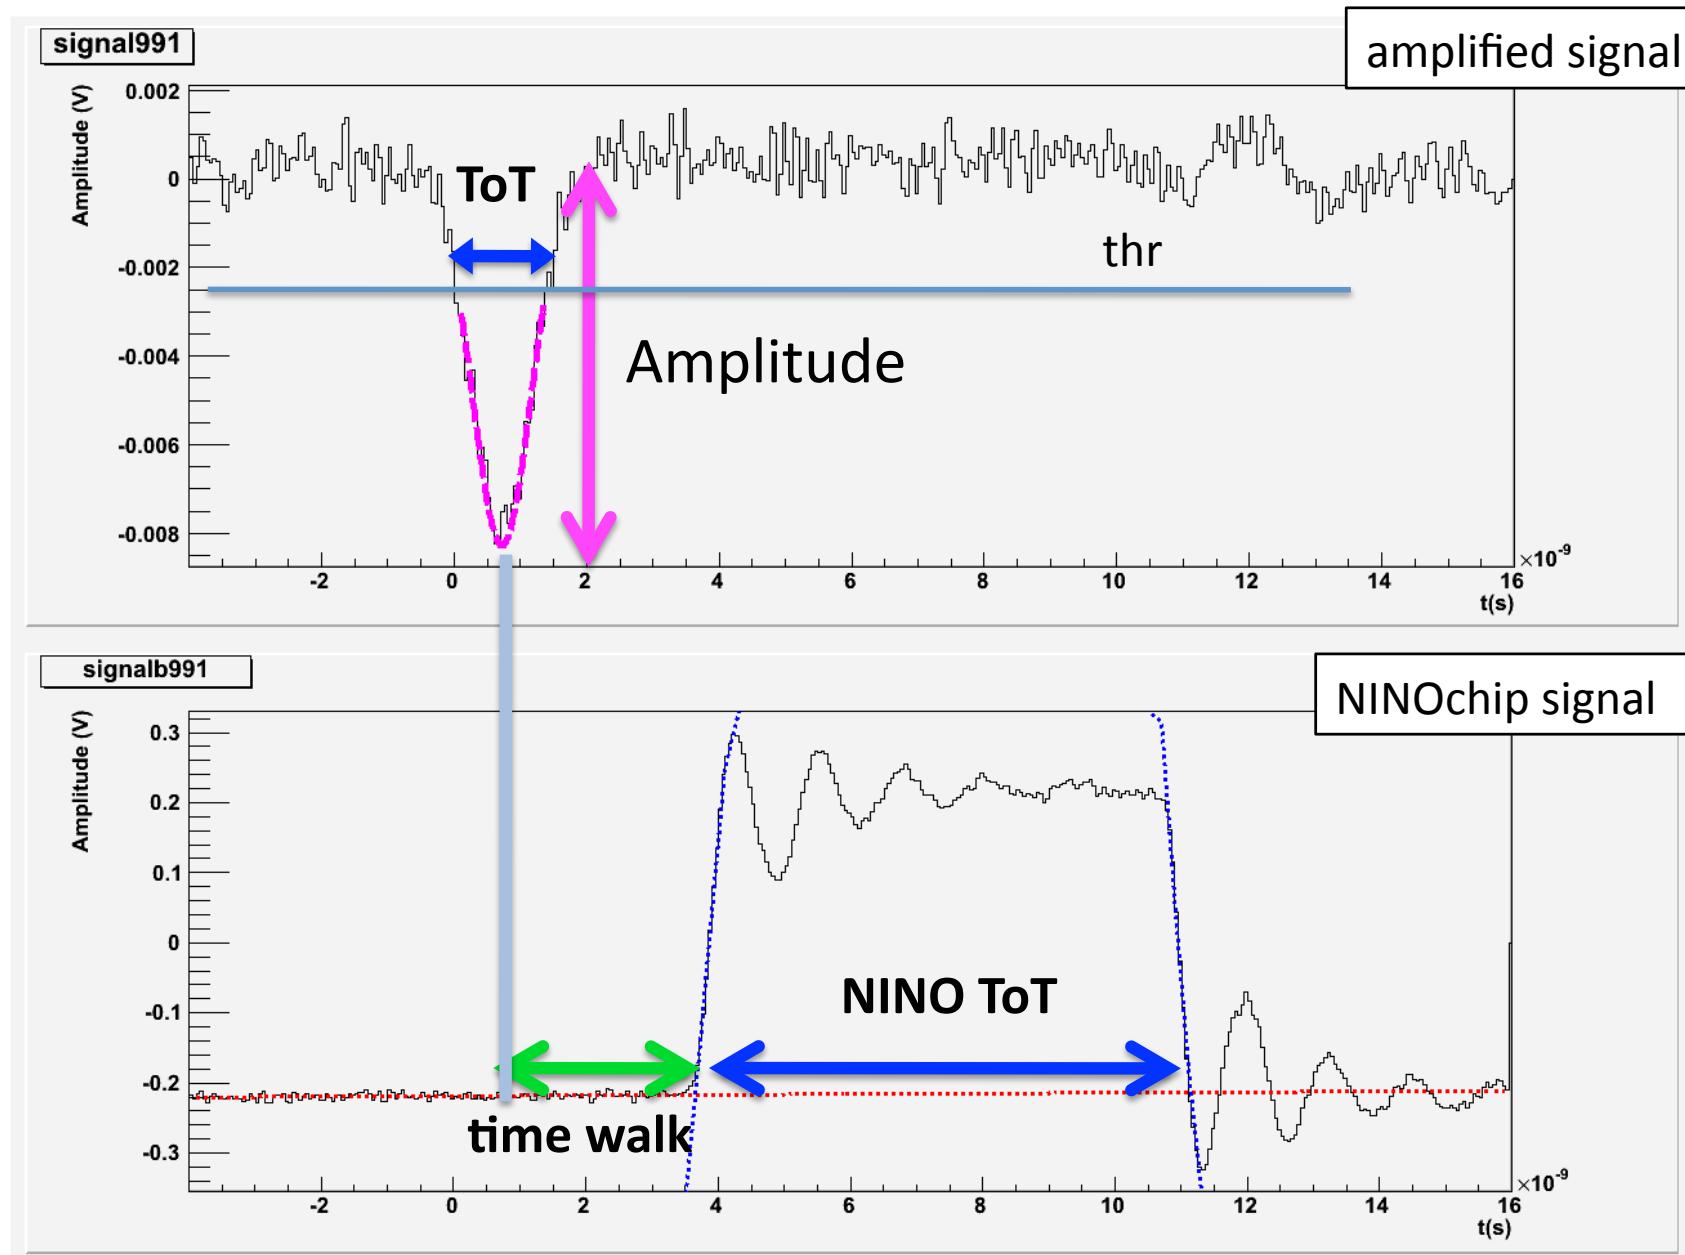

- MCP Burle xp 85012, 8x8 chs
- Pre-Amplifier board
- NINO test board (ATLAS exp.)
- Light Tight box
- Fast oscilloscope, Agilent Infinium series (20 GSamples/s)

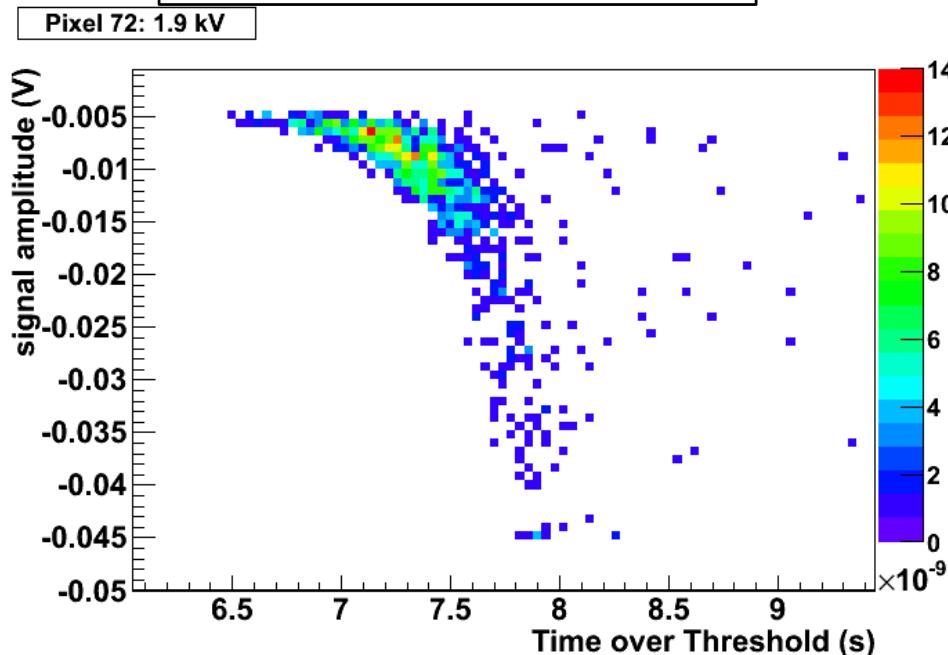

Signals

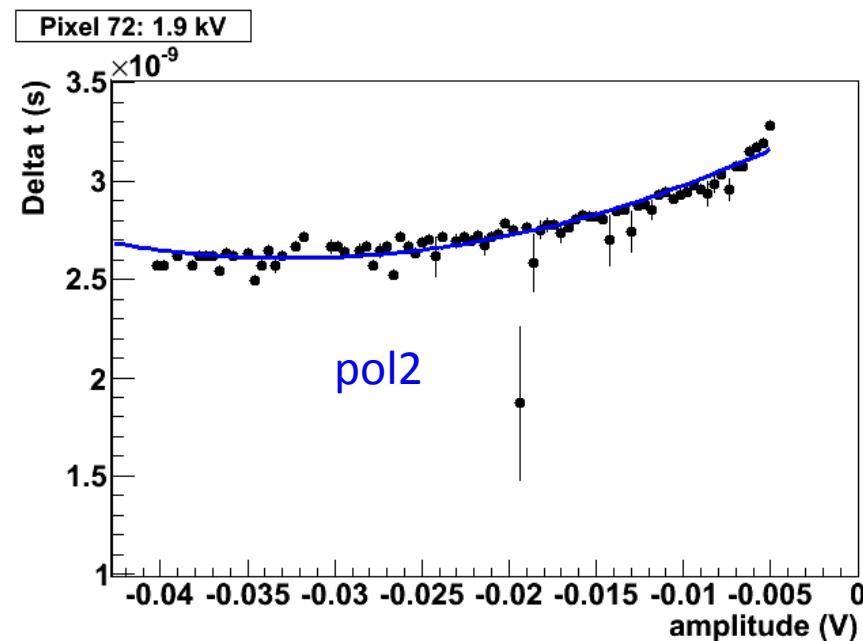

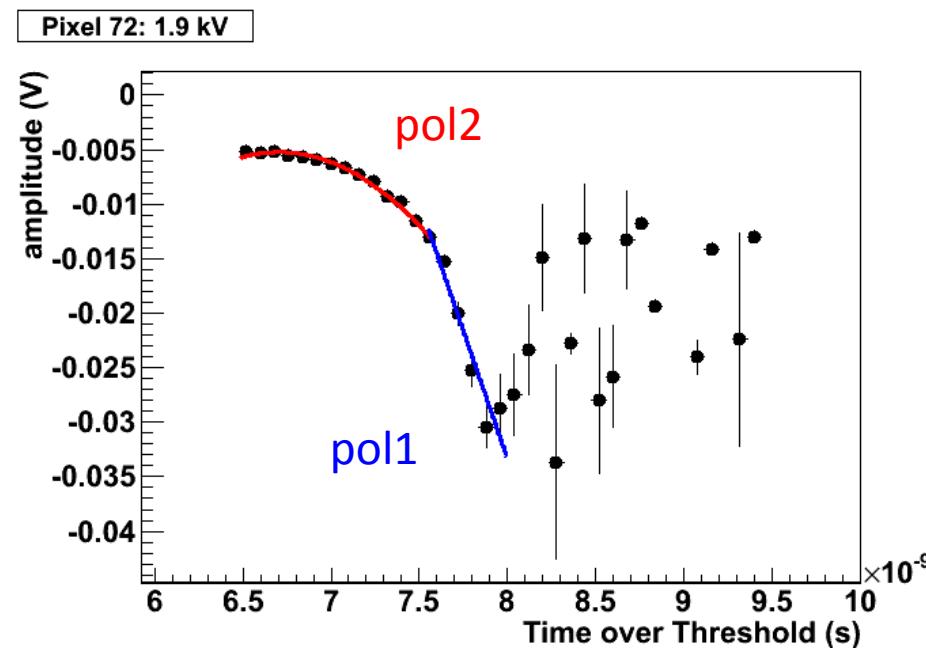

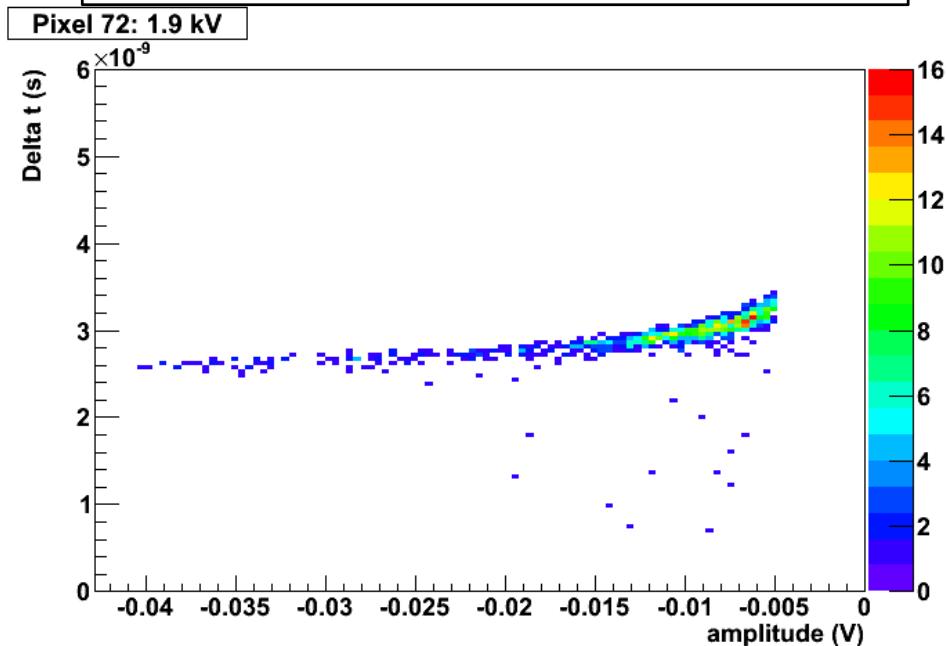

Signals

ToT vs Amplitude

Amplitude vs Time Walk

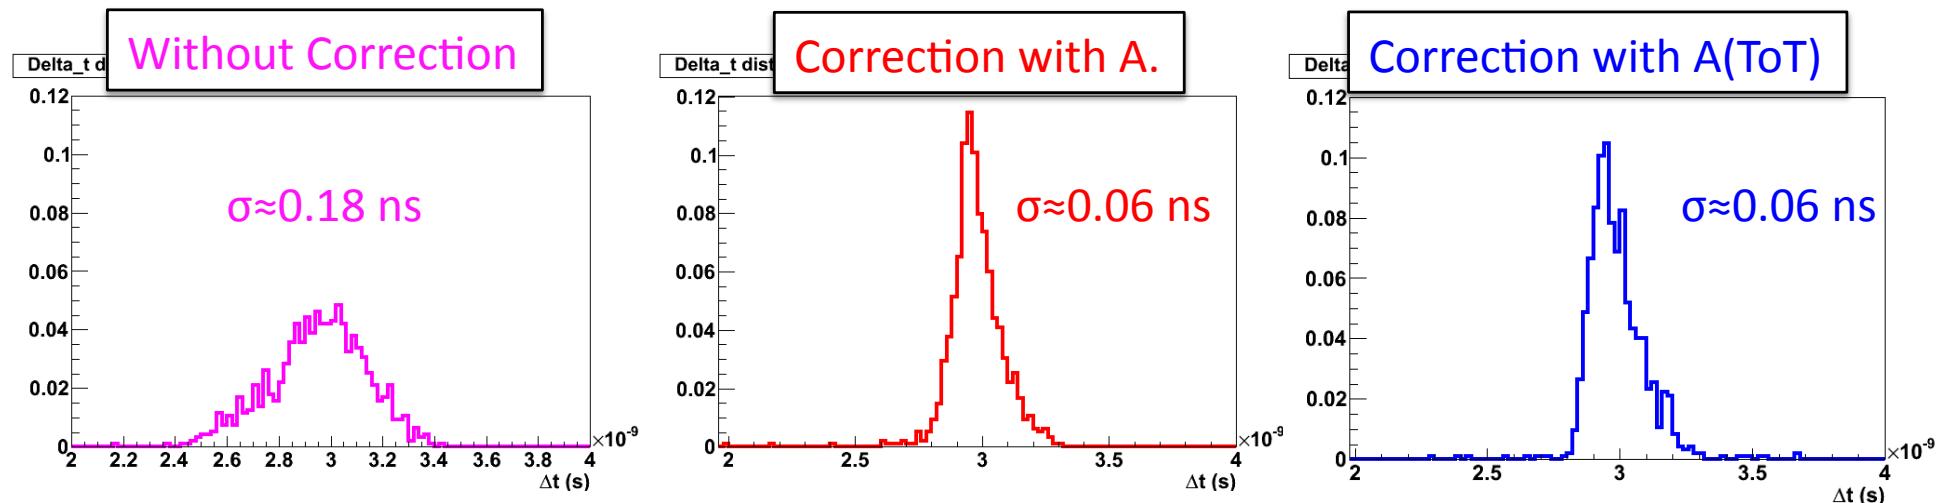

Time-Walk distribution

- The jitter introduced by NINO can be estimated by Time-Walk distribution
- Correction using measured and evaluated amplitude

Time Walk= Δt

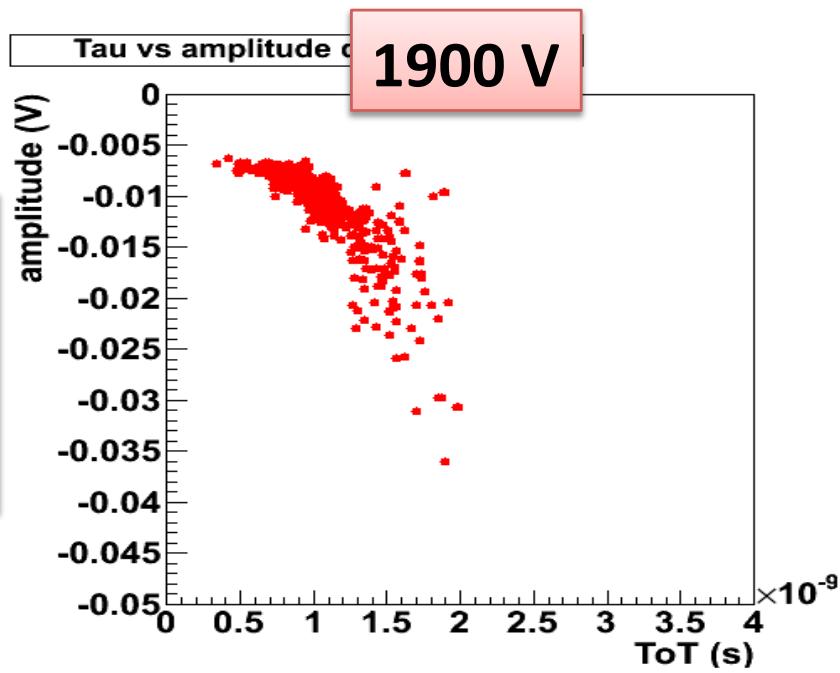

$$\Delta t_{\text{corrected}} = \left\{ \begin{array}{l} \Delta t - \Delta t^*(\text{Amplitude}) \\ \Delta t - \Delta t^*(\text{Amplitude}^*(\text{ToT})) \end{array} \right.$$

the ideal

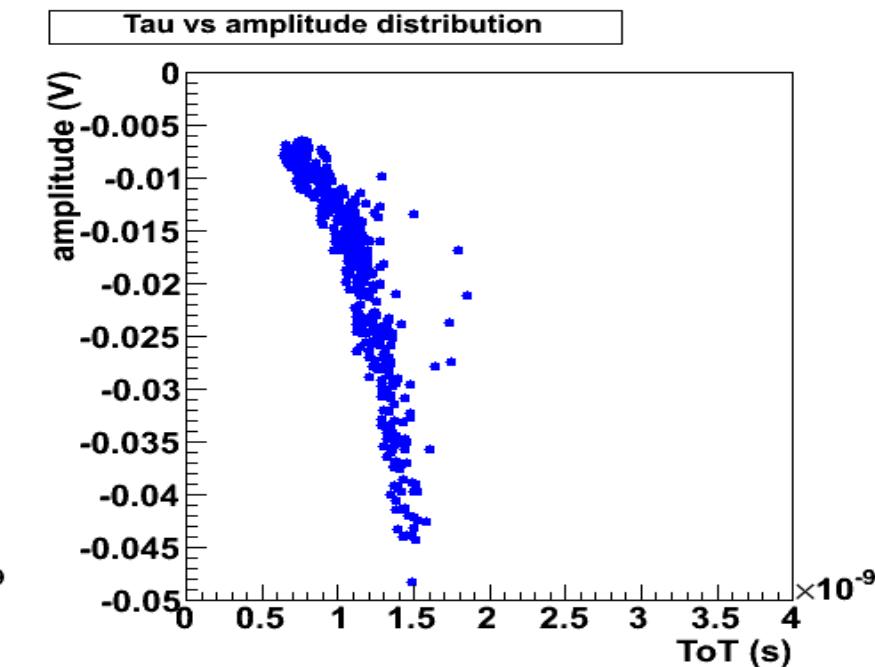

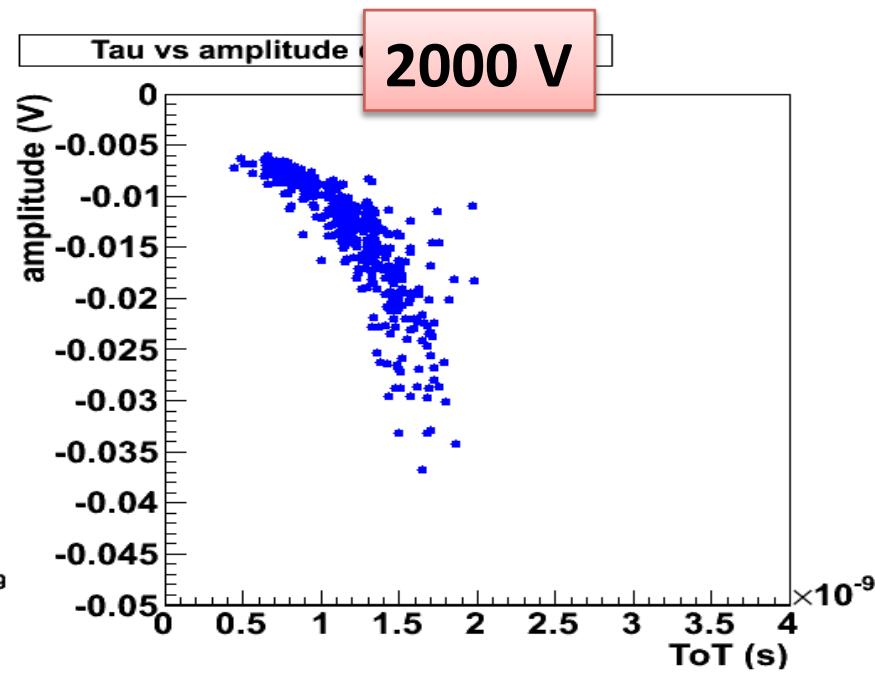

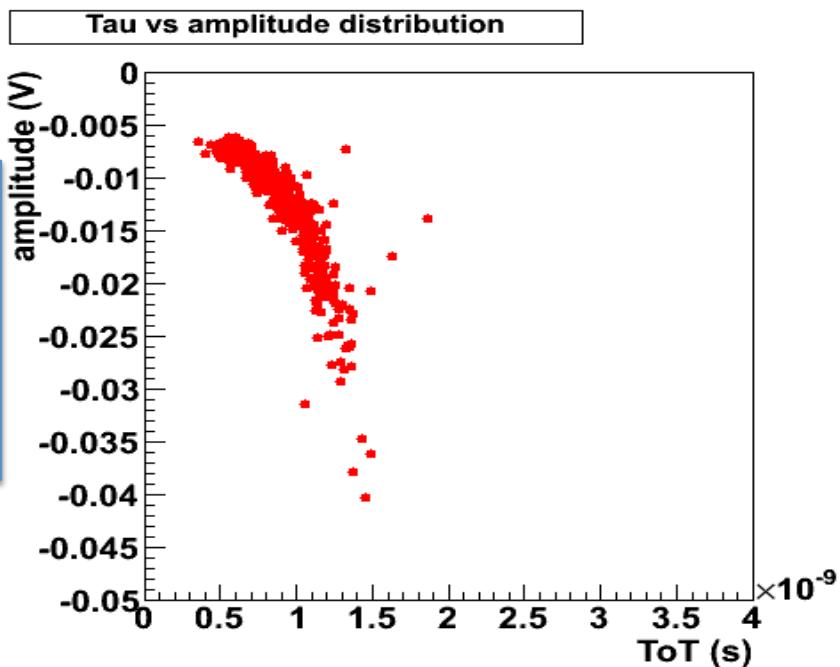

Different Bias & Pixel

Pixel 72

Pixel 45

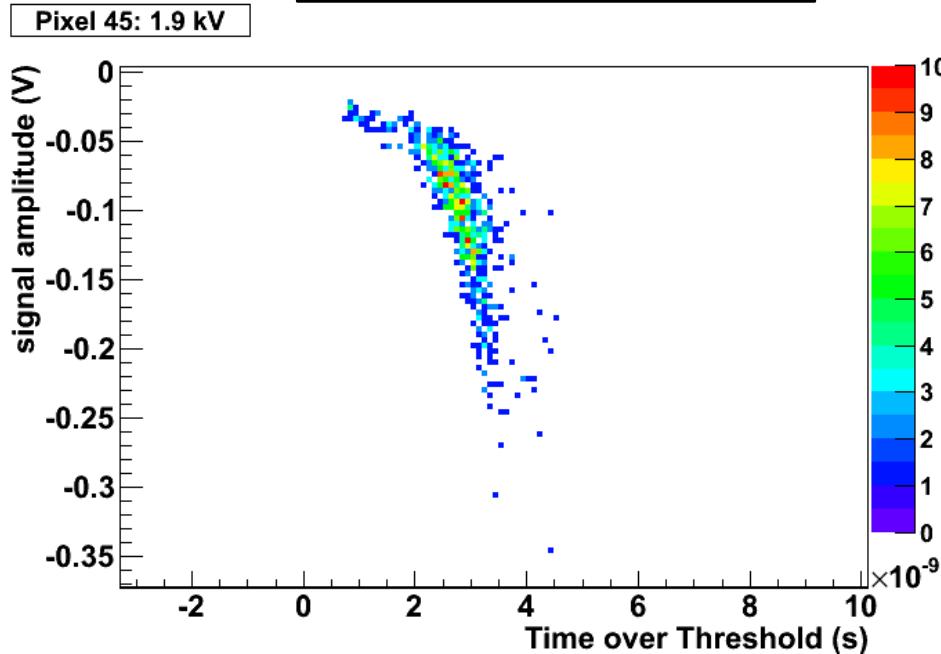

Beam Test Results

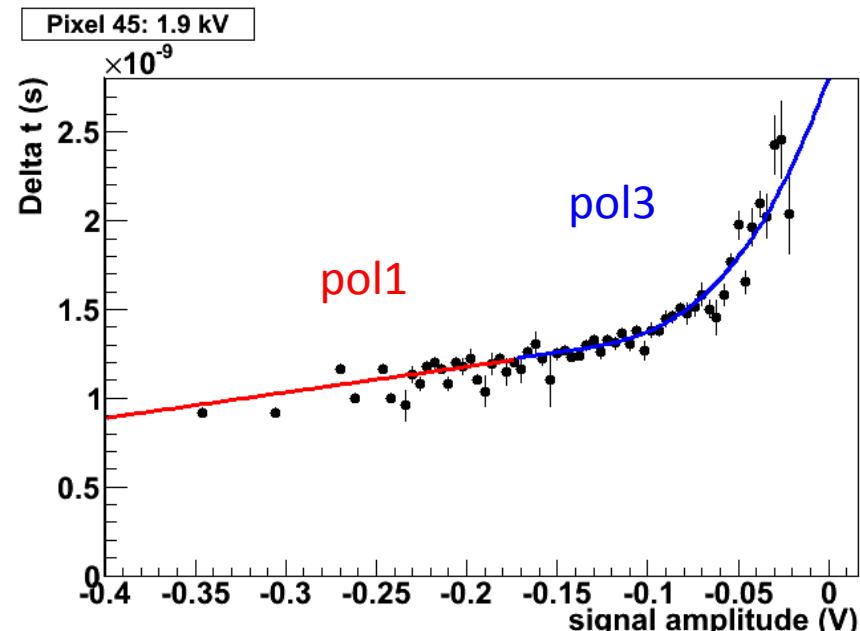

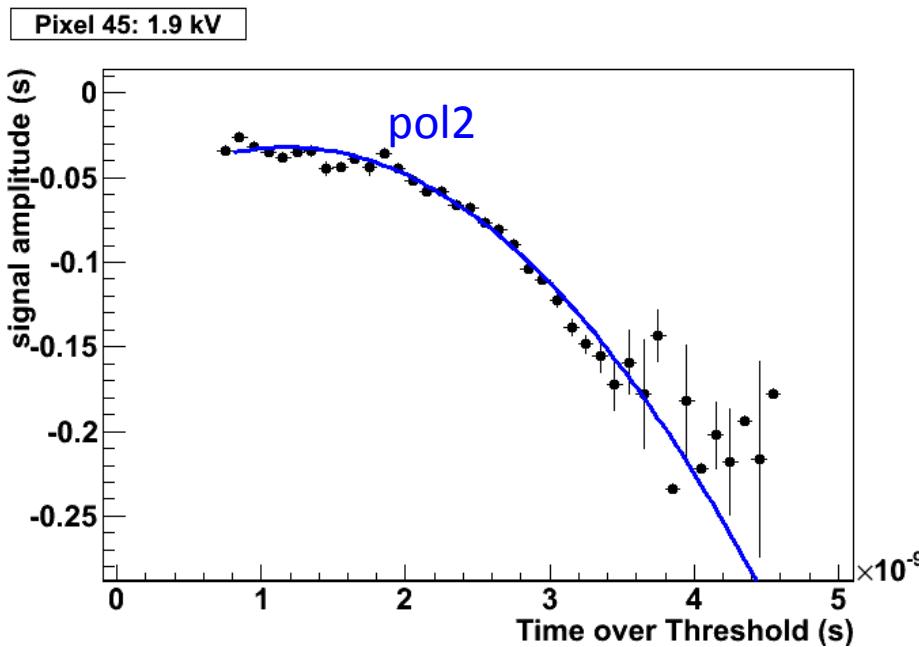

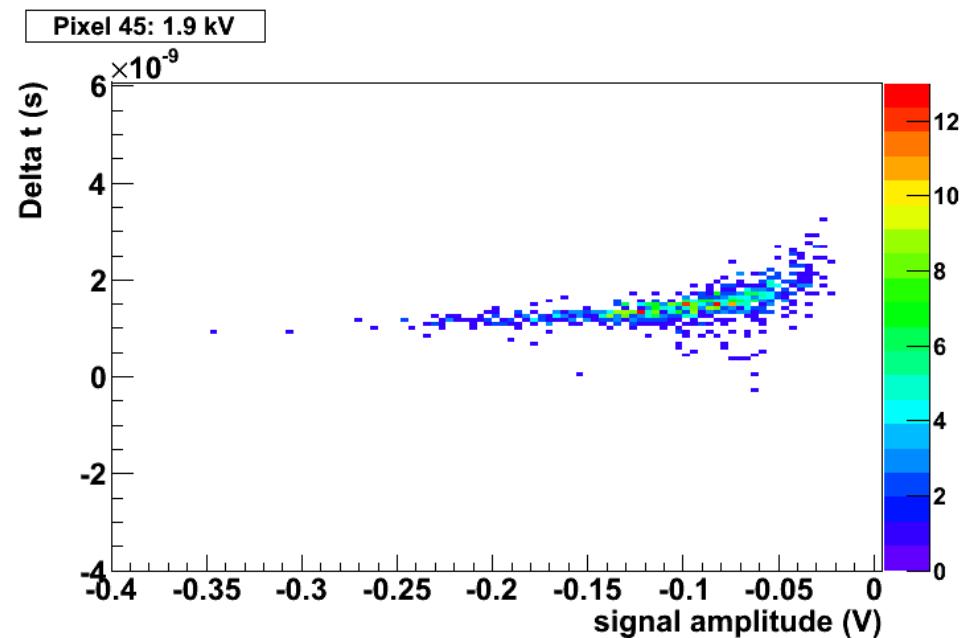

- Apply the same analysis using signals from Cherenkov light
- Check the method with two different bias level
- Data from 48° setup (see Maria's talk)

1900 V

ToT vs Amplitude

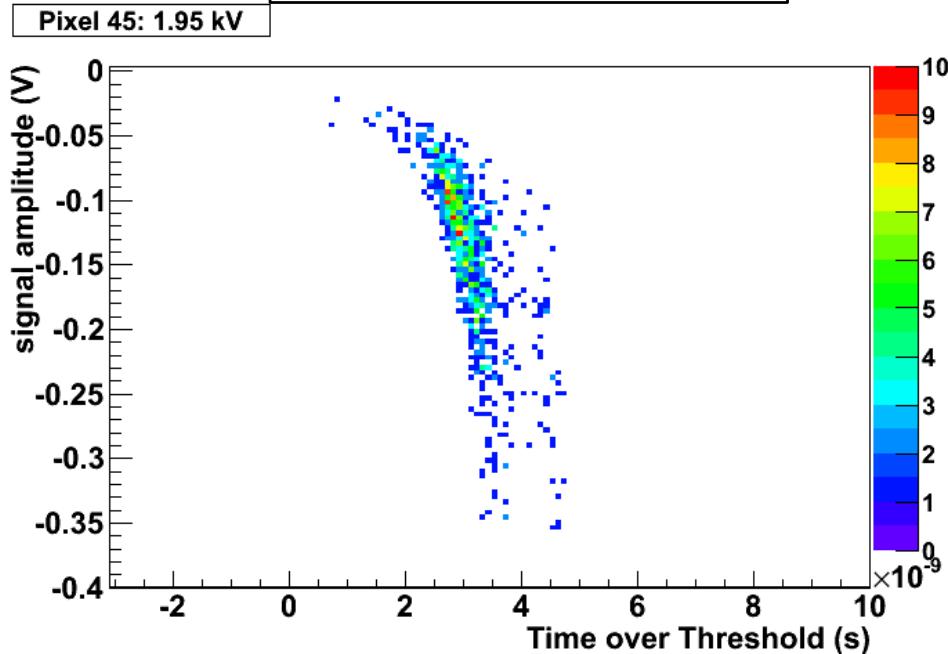

Amplitude vs Time Walk

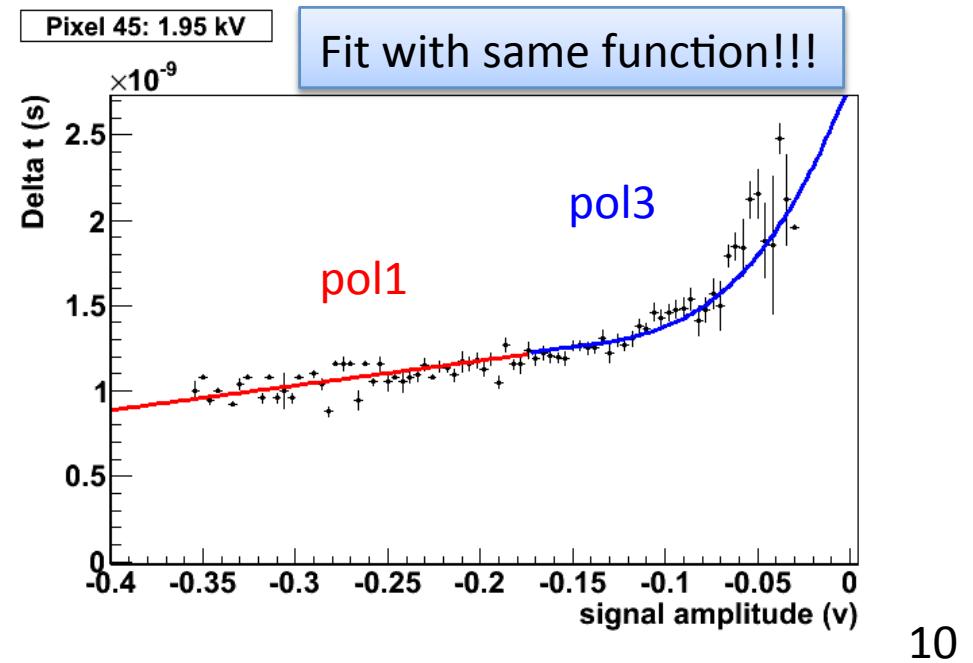

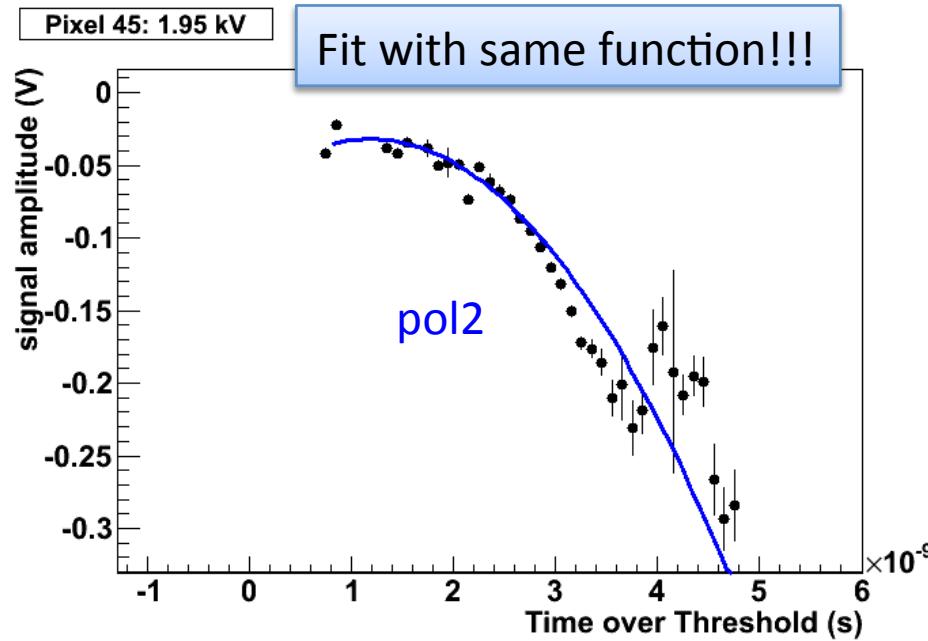

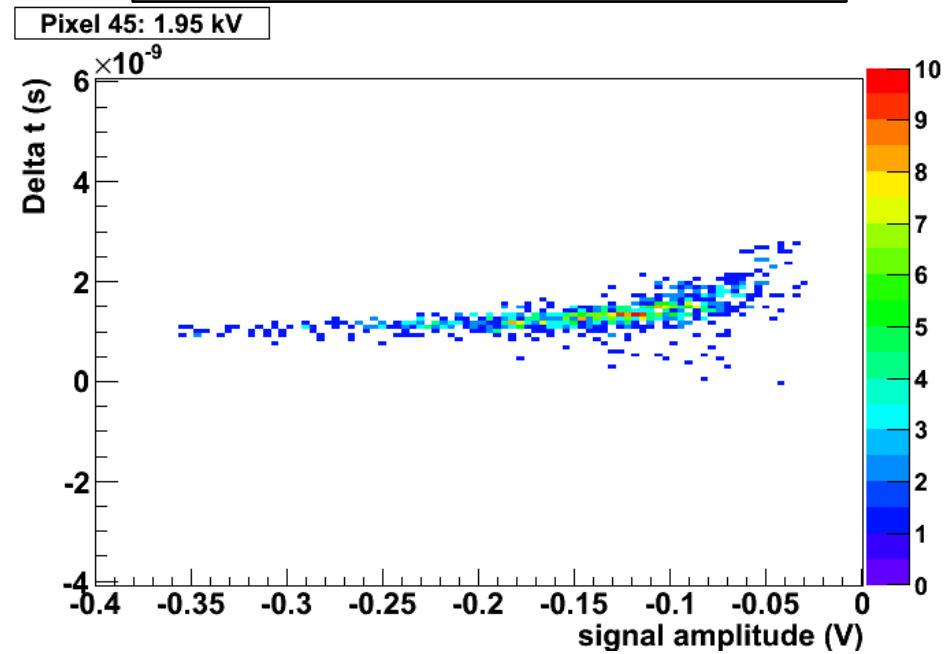

1950 V

ToT vs Amplitude

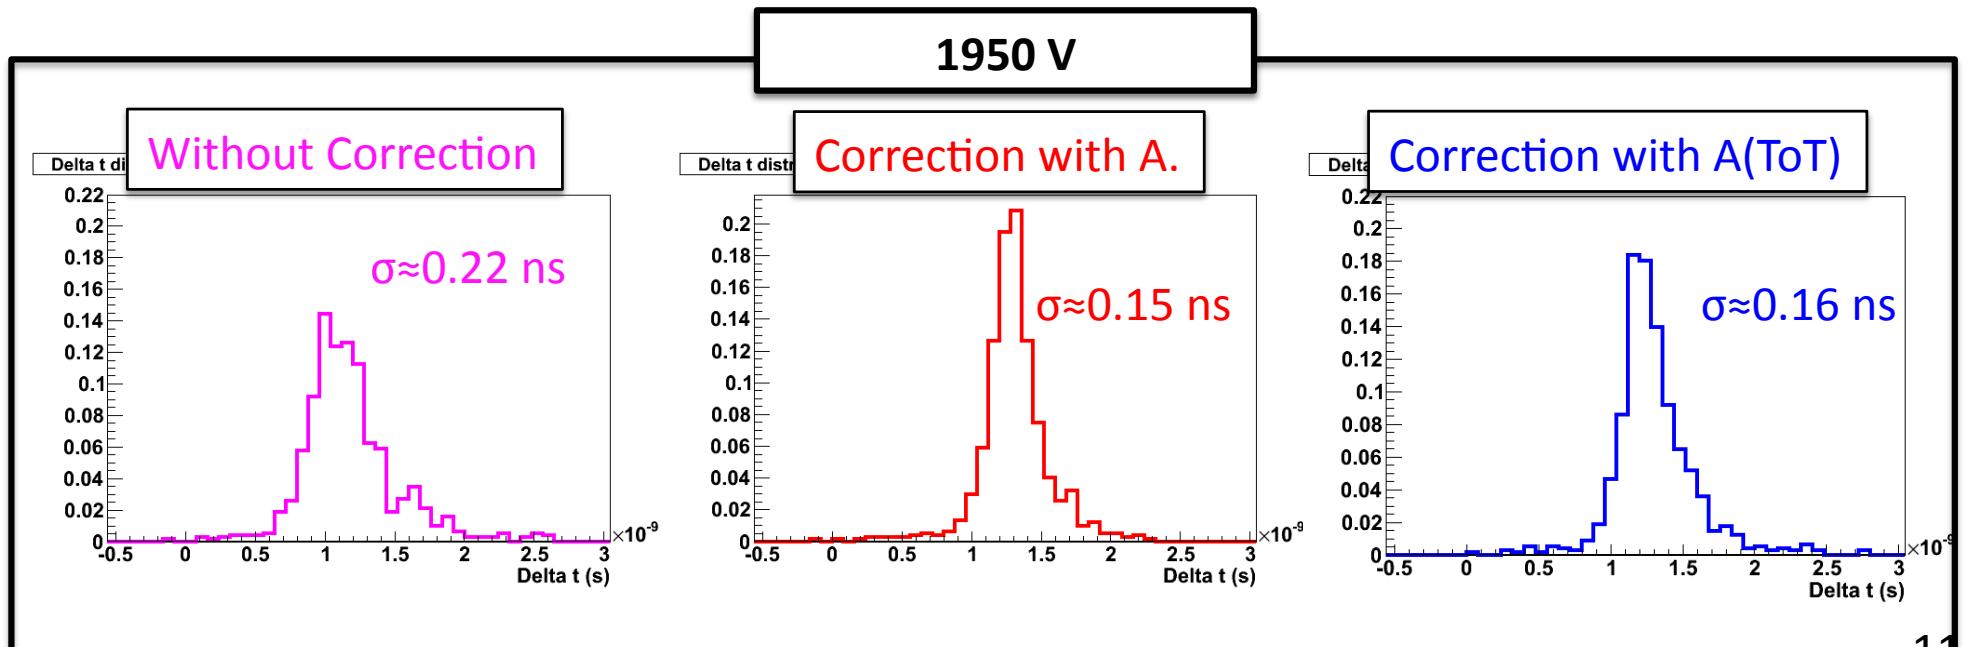

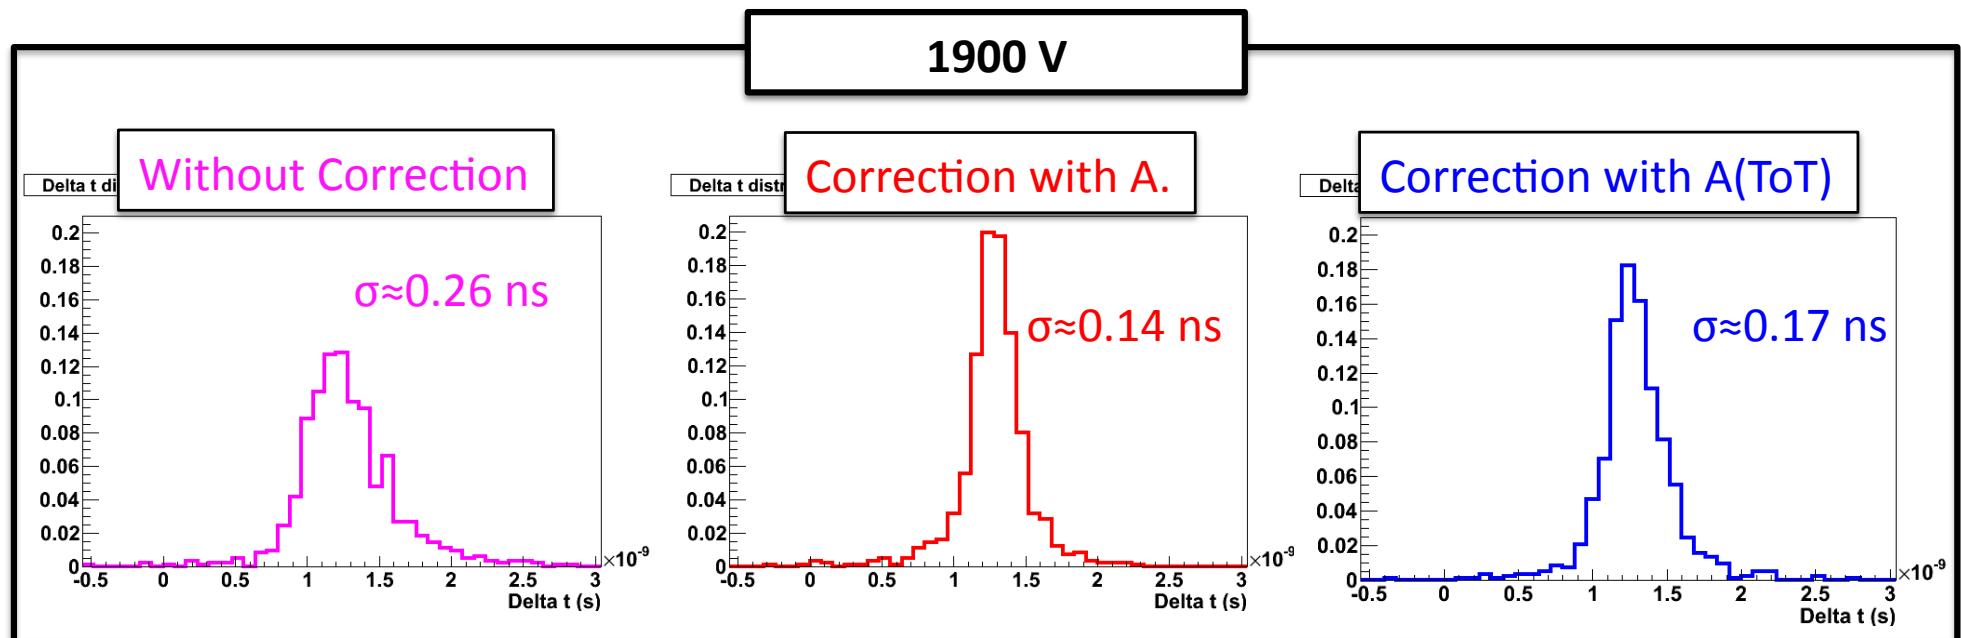

Amplitude vs Time Walk

10

Time-Walk distribution

Conclusion

- Time-over-Threshold
 - ✓ Stable relations between ToT and Amplitude (easy fit functions)
 - ✓ Possibility of Time-Walk correction (different bias & pixel)
 - ✓ Similar result between dark noise and beam test analysis

Outlooks

- Cherenkov spectrum with ToT (Maria's talk)
- Systematic study of ToT with new NINO board
 - Laser test for each pixel

$$\Delta t_{8 \times 8}(\text{ToT}) = \left\{ \begin{array}{ccccccc} \Delta t_{11}(\text{ToT}_{11}) & \cdots & \Delta t_{18}(\text{ToT}_{18}) \\ \vdots & & \vdots \\ \Delta t_{81}(\text{ToT}_{81}) & \cdots & \Delta t_{88}(\text{ToT}_{88}) \end{array} \right\}$$
$$A_{8 \times 8}(\text{ToT}) = \left\{ \begin{array}{ccccccc} A_{11}(\text{ToT}_{11}) & \cdots & A_{18}(\text{ToT}_{18}) \\ \vdots & & \vdots \\ A_{81}(\text{ToT}_{81}) & \cdots & A_{88}(\text{ToT}_{88}) \end{array} \right\}$$

- Test with TRBV3
- New test with muons and beam (June)
