

HEP Tech welcome

HEP Tech is very proud to be co-organizer of the ECD Days 2023 and would like to welcome all of you.

*HEP Tech is the **high energy physics technology transfer network** that brings together European high energy physics research institutions. Providing academics and industry with a single point of access to unique skills, capabilities and technologies to meet the R&D opportunities of the particle physics community. Technologies developed in the public sector for fundamental research in particle, astro-particle and nuclear physics have an enormous impact on our everyday lives.*

*The **scientific techniques** and **high-tech solutions** developed for particle physics can address a wide range of real world challenges faced by industry and society. Cryogenics is a great example of it.*

*Elizabeth Bain **HEP Tech** chair (STFC, UK)*
