

Charm and beauty production in Pb-Pb collisions at the LHC and the statistical hadronization model

Friday, January 19, 2024 11:10 AM (50 minutes)

I will review the broad aspects of quarkonium production at the LHC and compare to the statistical hadronization model predictions. The focus will be on pT-integrated yields and will include open-charm hadrons and also comparisons to other approaches.

Presenter: ANDRONIC, Anton (Universitaet Muenster)
