Example histograms from fairrun_8_6.root:

First conclusions

Unpacking and Sts reconstruction stable for most of the runs/time

- Extraction of performance of Sts local reconstruction → Typical numbers derived (factor of 2 between Hits/s and Sts-Digis/s)
- Typical number of events built: 2 e5/s
- Setting of OpenMP threads with minor overall impact
- Additional contributions from several unpackers, monster events, event building
- Issues for writing output files with Sts reconstruction
