PANDA

ErUM-FSP T08: PANDA

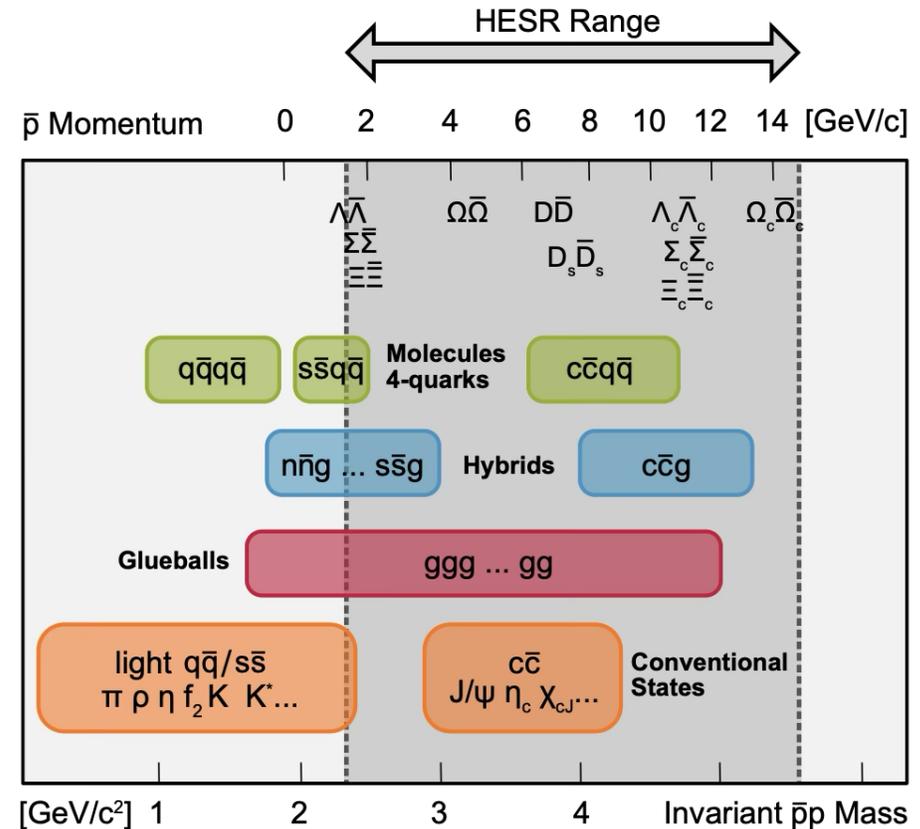

Hadron Spectroscopy

- Light mesons
- Exotic matter (Glueballs, Hybrids etc.)
- Charmonia (including XYZ states)
- Open Charm Physics
- Baryons and Hyperons

Nucleon Structure

- Generalised Parton Distributions (GPD)
- Transition Distribution Amplitudes (TDA)
- Time-like proton form factor
- Transverse Parton Distribution

Physics of Hypernuclei

Very broad physics program
PANDA will contribute to various fields!

- International collaboration of about 500 scientists
- FAIR review 2022: physics reach and experimental program unique and world-class
- Yet, severe impact of FAIR delay and cost hike, world politics etc.
- Detector construction progressing well until 2022 (large Russian contribution lost)
- Large German university involvement

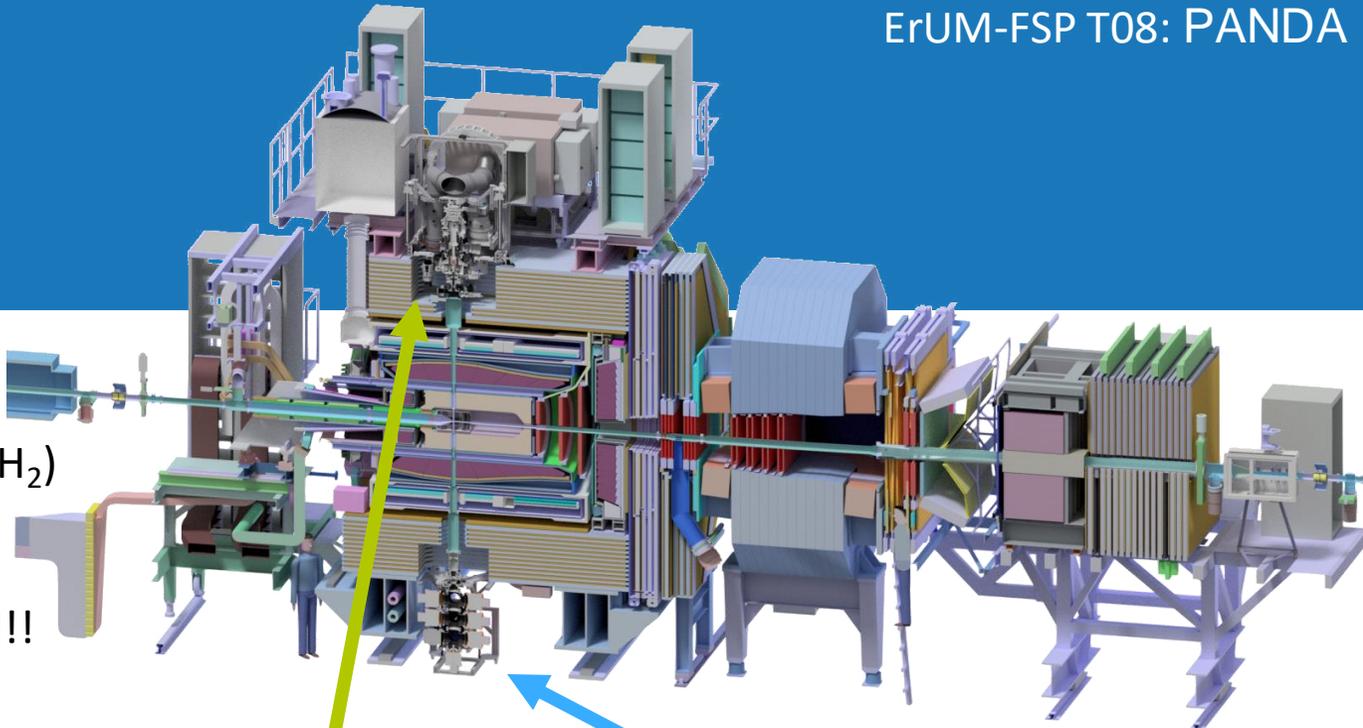

RU Bochum
RFWU Bonn
FAU Erlangen
GU Frankfurt
JLU Gießen
JGU Mainz (+HIM)
U Münster
FAIR/GSI

Cluster Jet Target (MS)

- From 2018 routinely in operation at COSY
- Target thickness achieved: $2 \cdot 10^{15}$ atoms/cm² (H₂)
for luminosities of up to $L = 2 \cdot 10^{32}$ cm⁻²s⁻¹
- Interaction point: **> 2 m behind the jet nozzle !!!**

Very recently:

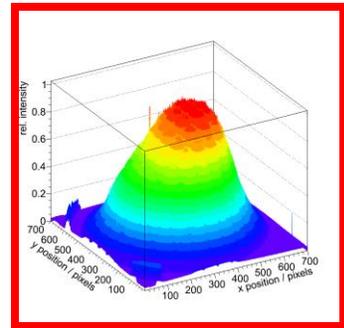

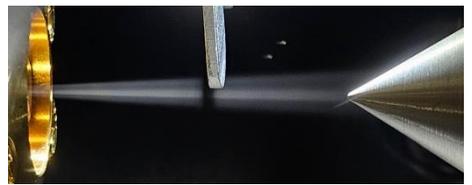

- New beam dump with new diagnostic tools in operation
- New jet nozzles produced for even higher target thicknesses

Cluster generator

Beam dump

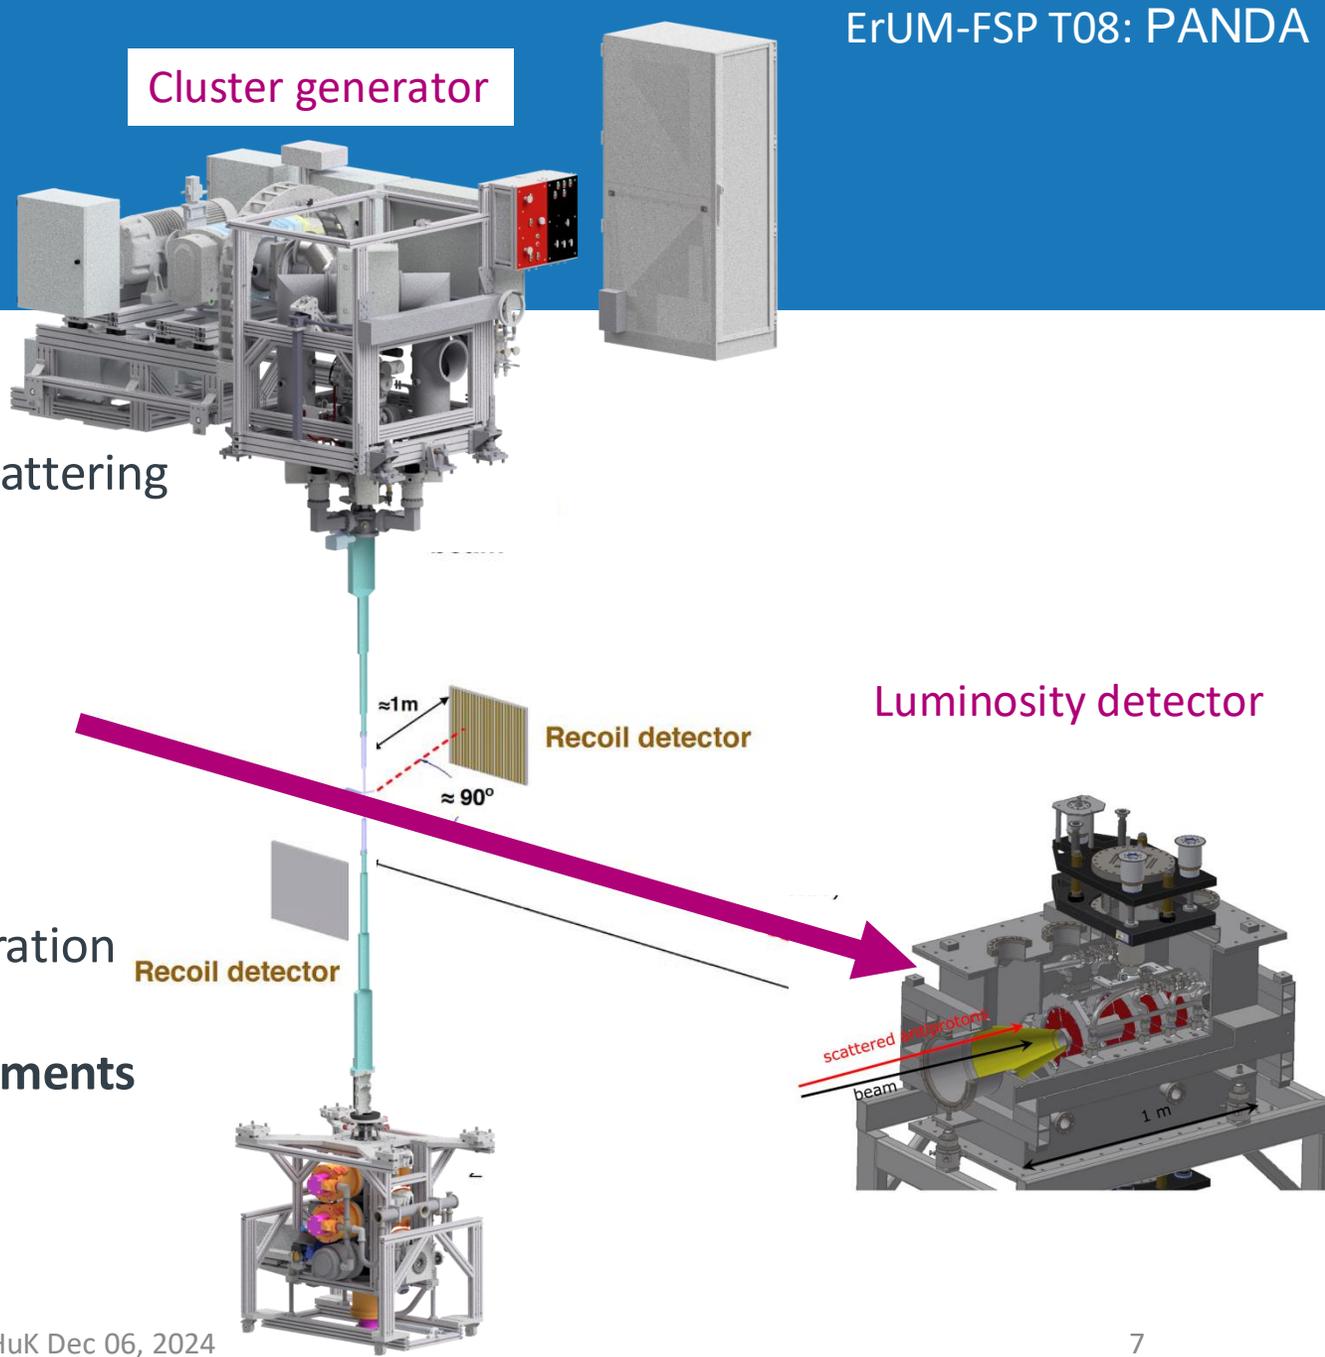

Cluster Jet Target

KOALA: From COSY to CaveC/GSI

- Preparatory measurements on $p\bar{p}$ elastic scattering at GSI-CaveC starting in 2026 using
 - **Final PANDA Cluster-Jet Target**
 - **Final PANDA Luminosity Detector**
 - 4 GeV SIS18 proton beam
 - 90° recoil detector
- Studies on ion beam induced cluster evaporation using protons and heavy ion beams with relevance for **PANDA** and **other FAIR experiments** (e.g. jet target experiments at Crying)

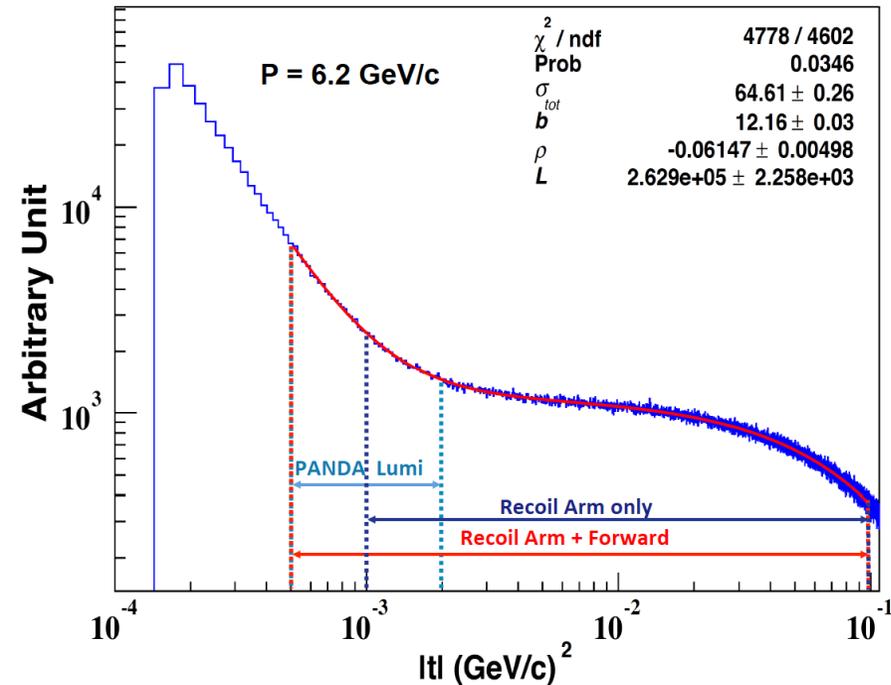

Participants:

RU Bochum, JGU Mainz, U Münster

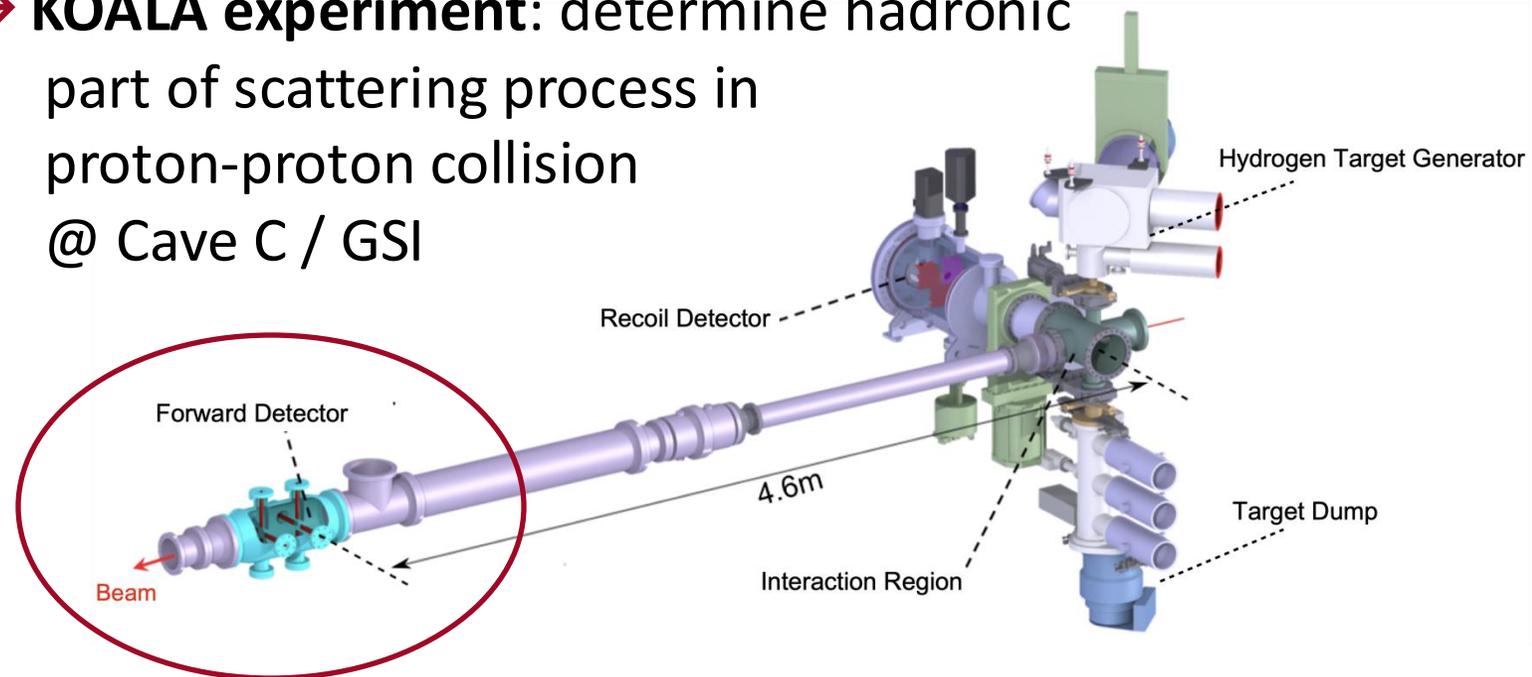

Luminosity Detector for KOALA@GSI

Knowledge of luminosity (<3%) of key importance for PANDA

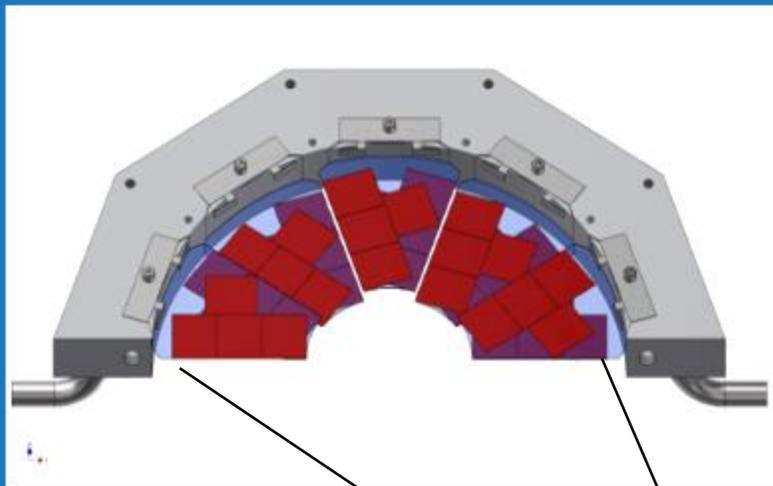

- Elastic anti-proton - proton scattering process for luminosity measurement
- At small scattering angles QED part dominant
- At higher beam energies limitation from hadronic contribution

→ **KOALA experiment:** determine hadronic part of scattering process in proton-proton collision @ Cave C / GSI

Cooperation between HIM and
RU Bochum and U Münster

use PANDA luminosity detector as forward tracker

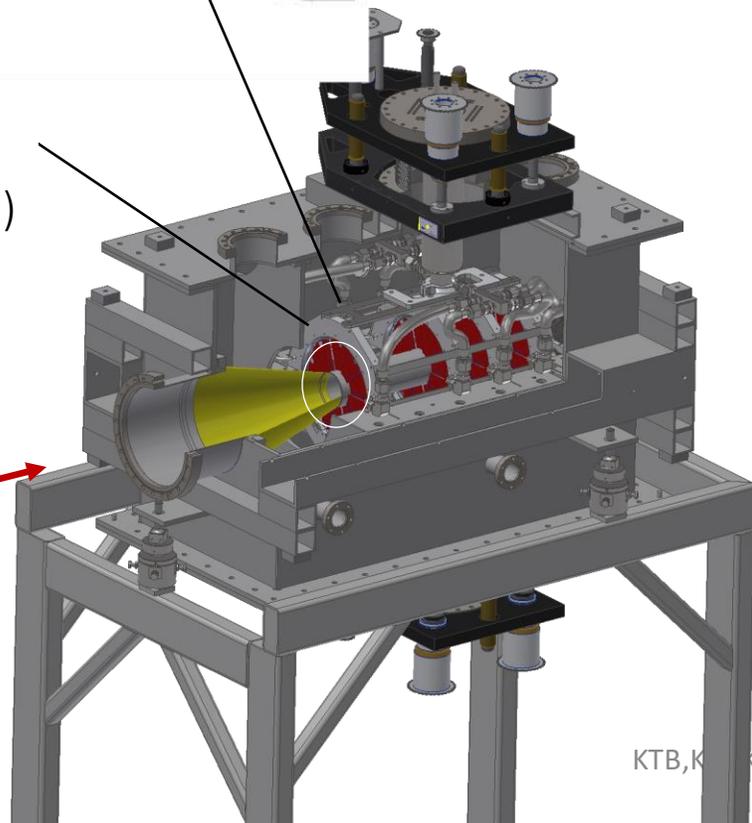

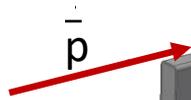

**Pixel Tracking Detector
(HV-MAPS, 4 planes) located in vacuum
for elastically scattered antiprotons 3 – 8 mrad**

- Mainz responsibilities:**
- mechanical construction
 - cooling
 - vacuum
 - alignment
 - integration
 - electronics readout

- Challenges:**
- cooling of HV-MAPS sensors
 - operation in vacuum
 - ultra-thin cables to reduce multiple scattering

HV-MAPS
(20x20 mm², 50 μm thin)
on CVD diamond
wafers (200 μm)

elastically
scattered \bar{p}
12 m from target

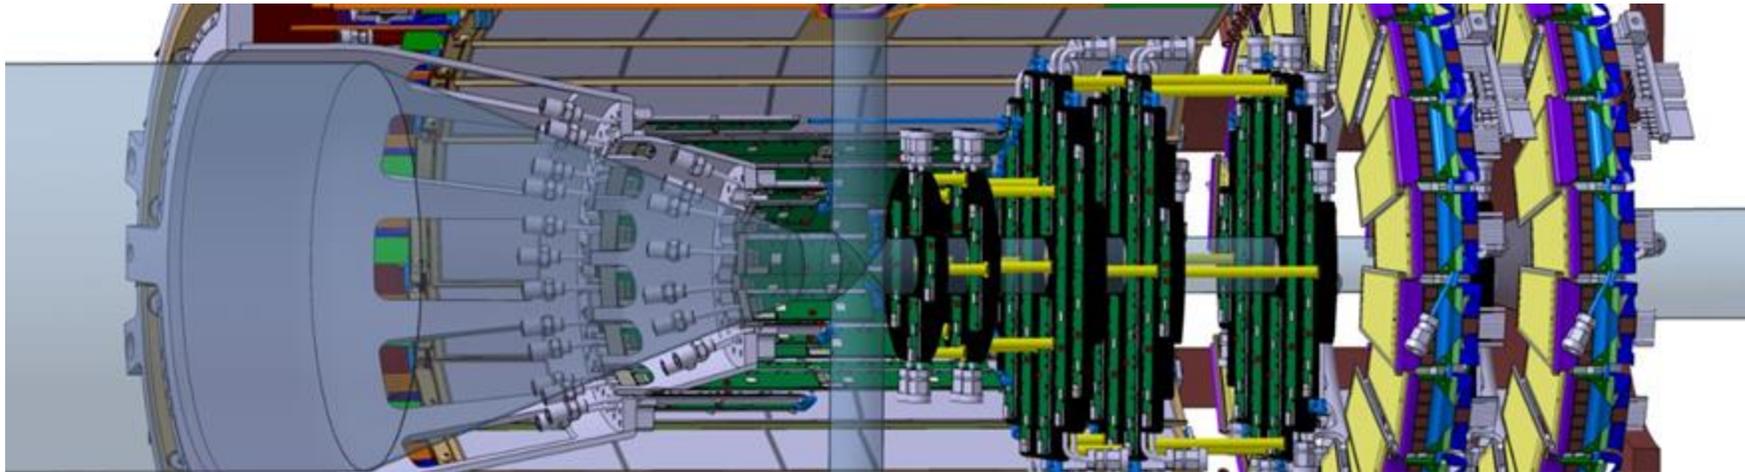

JUSTUS-LIEBIG-
UNIVERSITÄT
GIESSEN

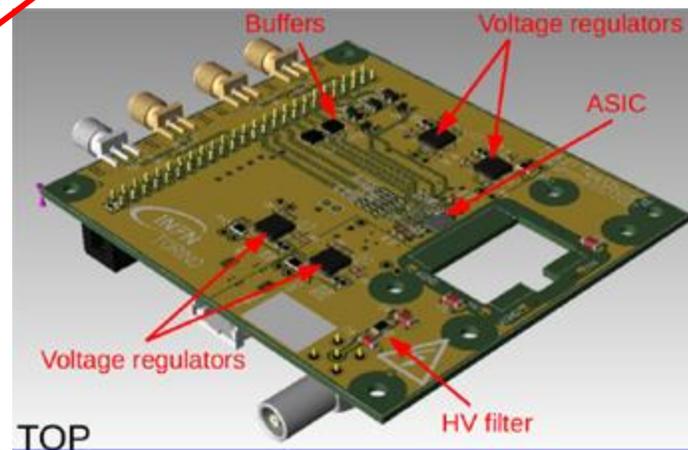

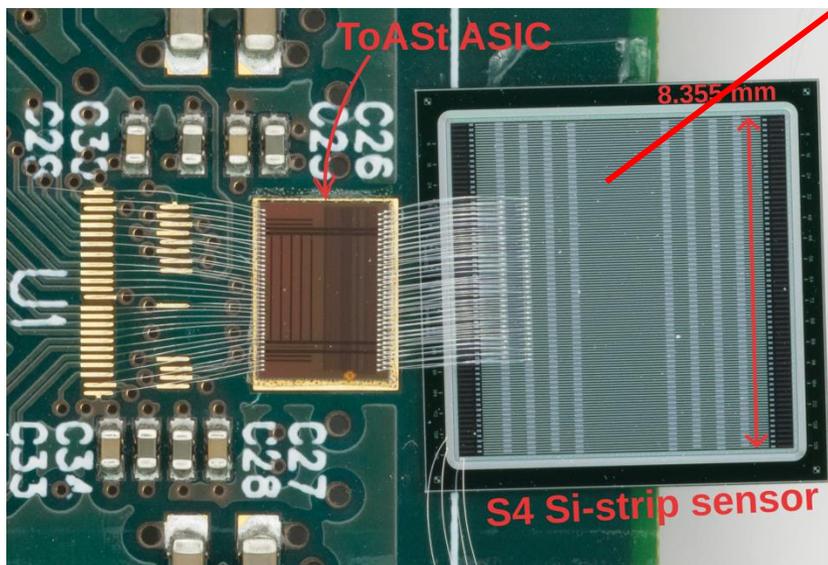

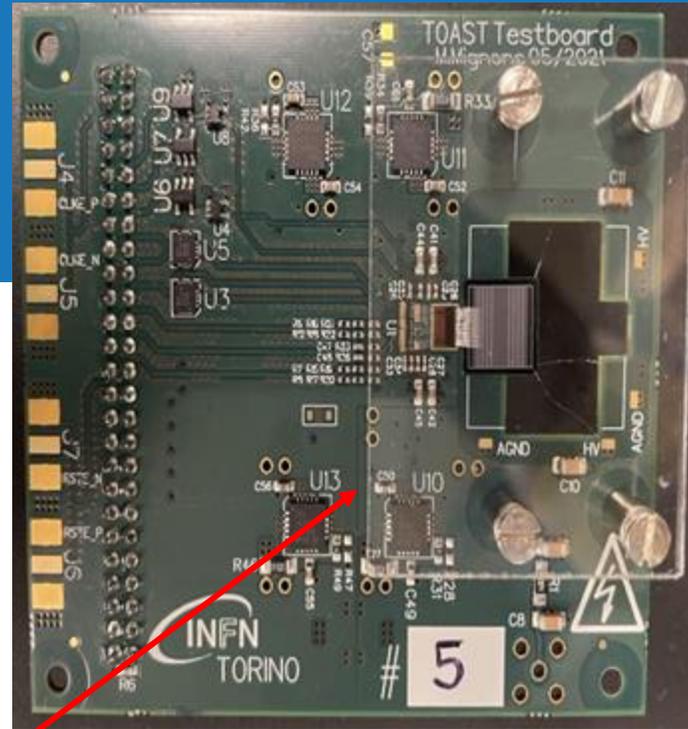

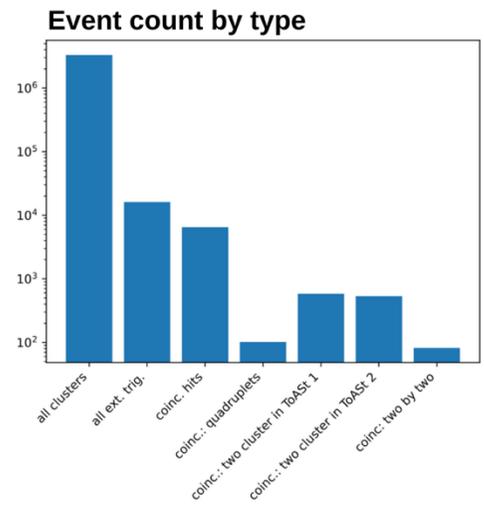

Istituto Nazionale di Fisica Nucleare
SEZIONE DI TORINO

- PANDA (CiS) strip sensors connected to ToASt front-end (Torino)
- Wire bonding (17 um Al, biasing, read-out, DAQ (KIT))
- Beam tests COSY, MAMI: DAQ, two-sensor coincidences

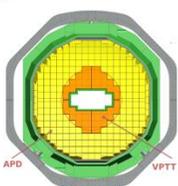

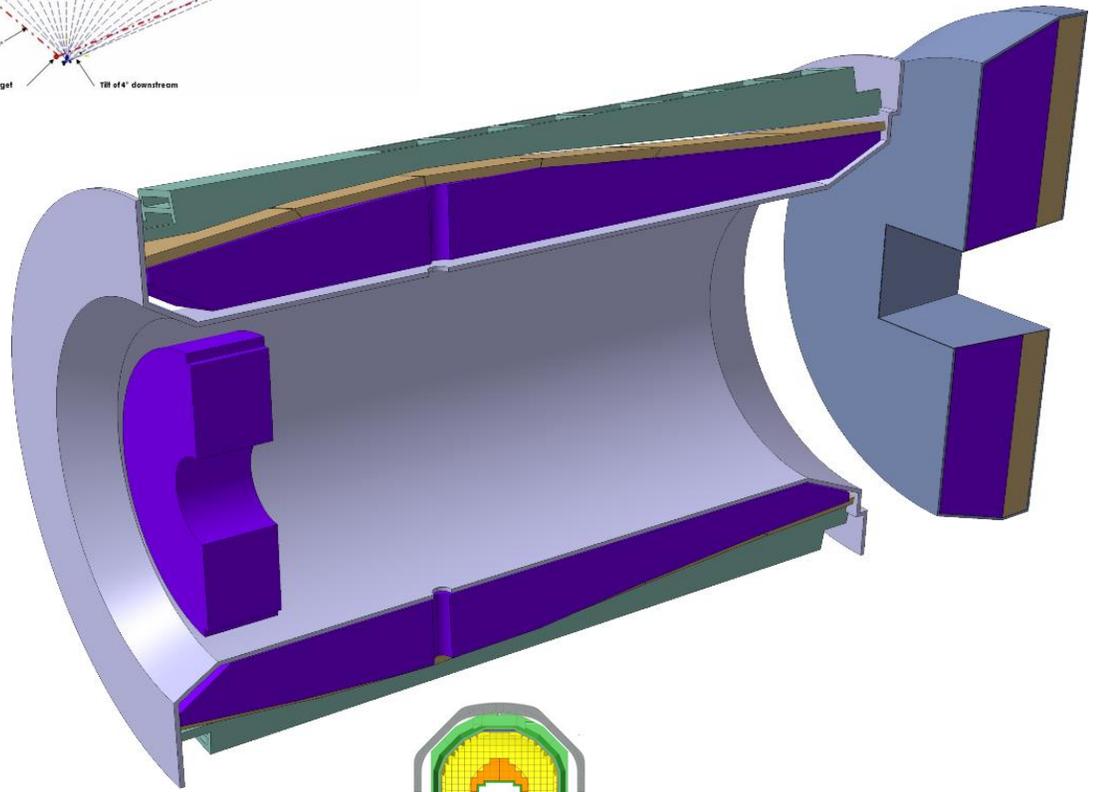

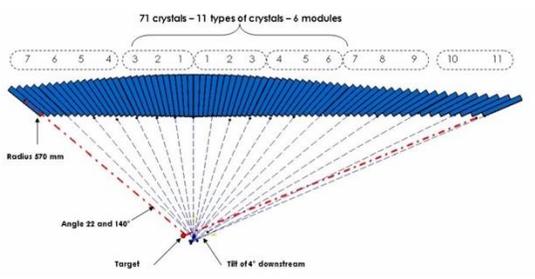

Electromagnetic Calorimeter

(BO, BN, GI, MZ, GSI, HIM, Prague, Uppsala, Groningen ...)

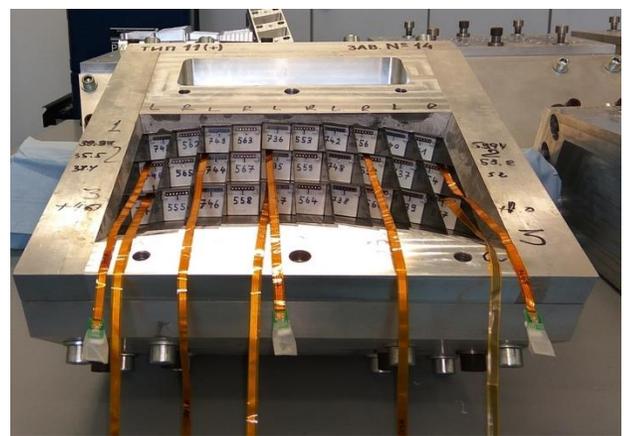

ErUM-FSP T08: PANDA

KTB, KHuK Dec 06, 2024

PWO-II

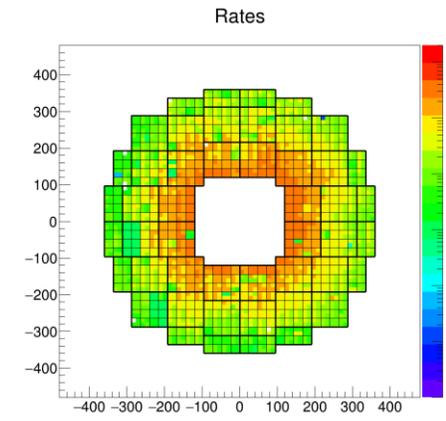

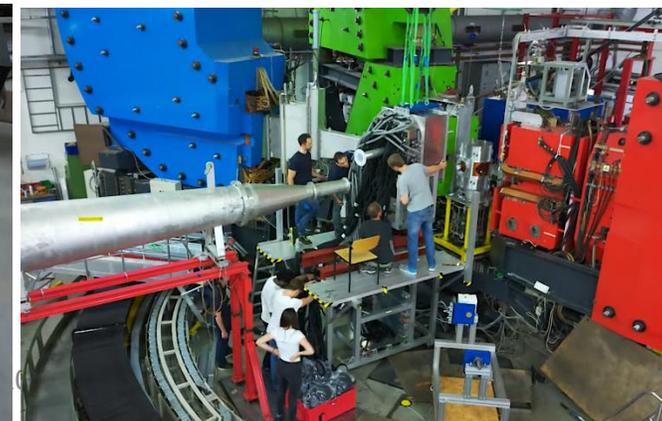

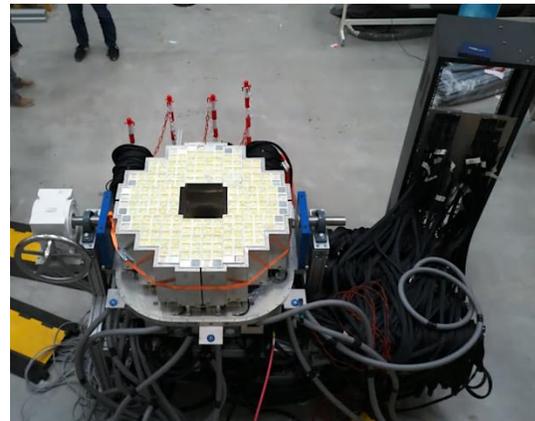

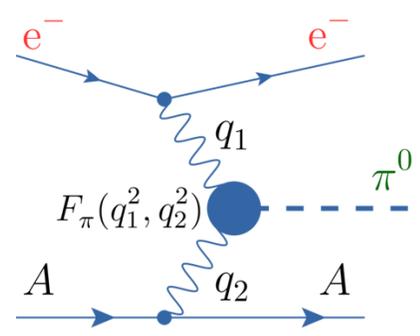

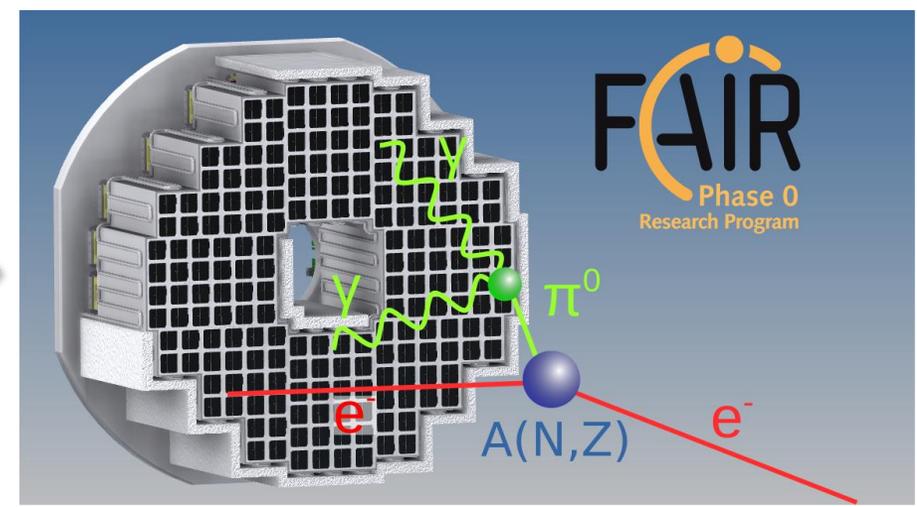

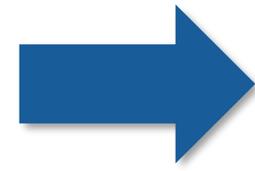

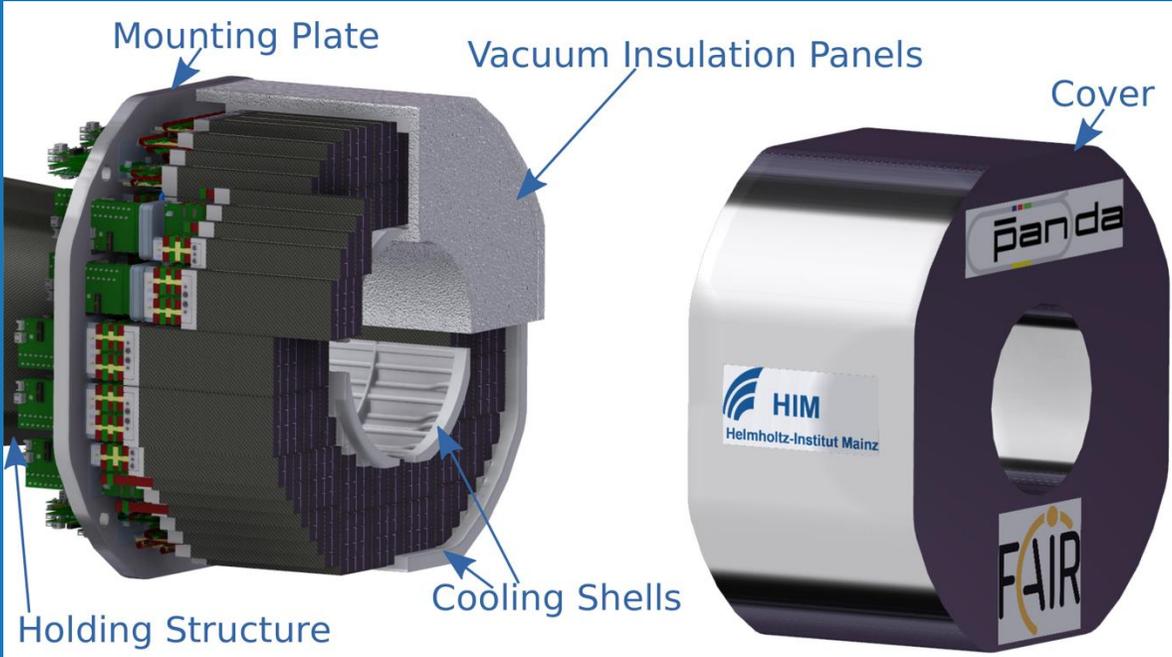

200mm (23 X₀)

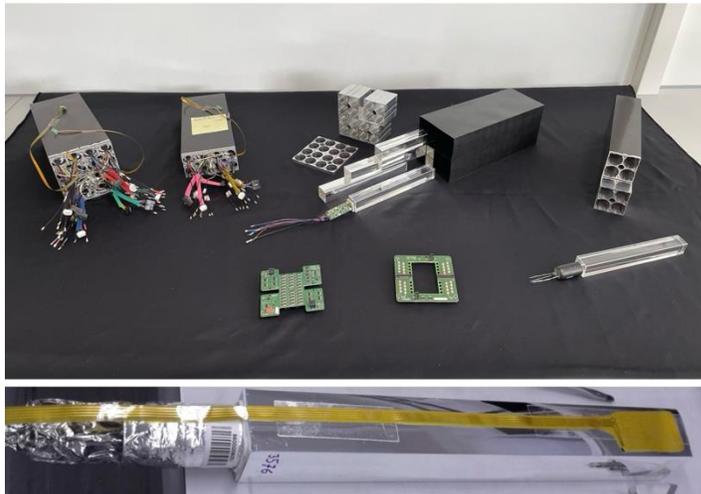

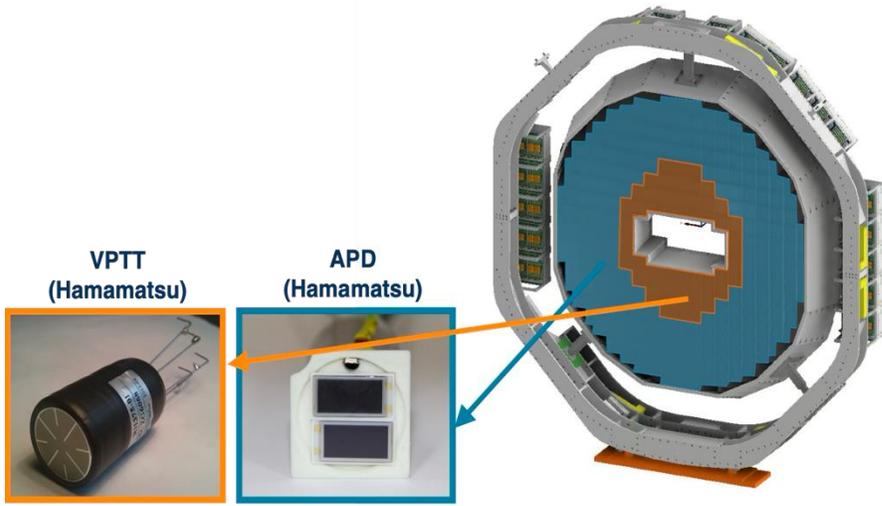

Electromagnetic Calorimeter: Backward Endcap at MAMI (MZ, HIM)

ErUM-FSP T08: PANDA

Electromagnetic Calorimeter: Forward Endcap (BO, BN, GI, GSI et al.)

First test: COSY 2023
 $pp \rightarrow pp\pi^0$

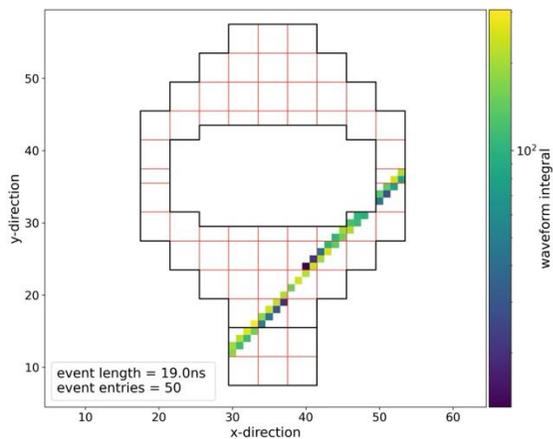

KTB, KHuK Dec 06, 2024

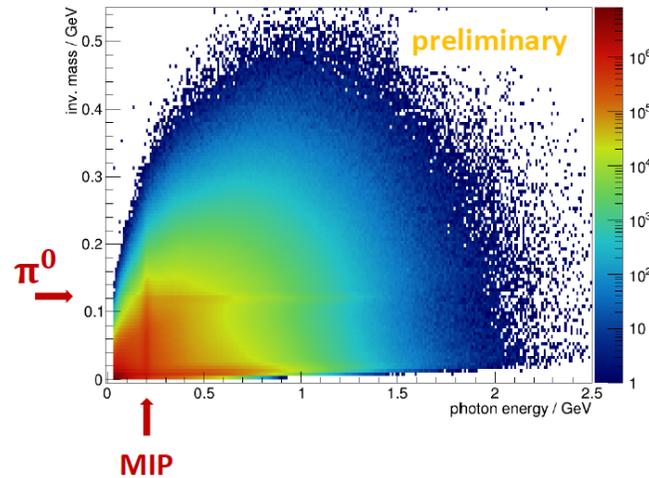

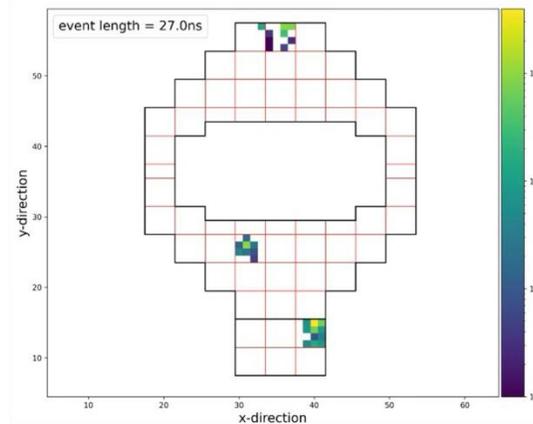

Electromagnetic Calorimeter: Forward Endcap at COSY

ErUM-FSP T08: PANDA

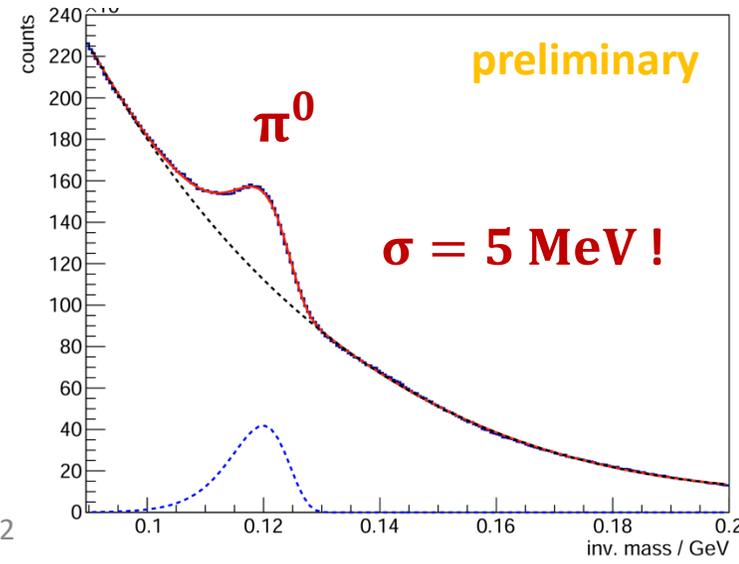

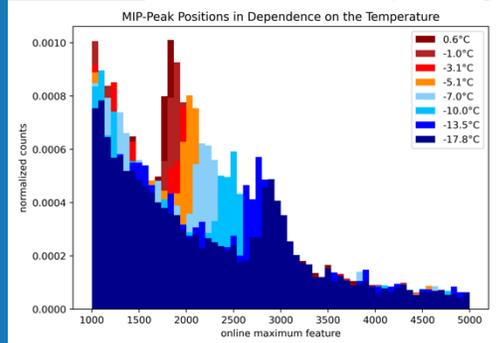

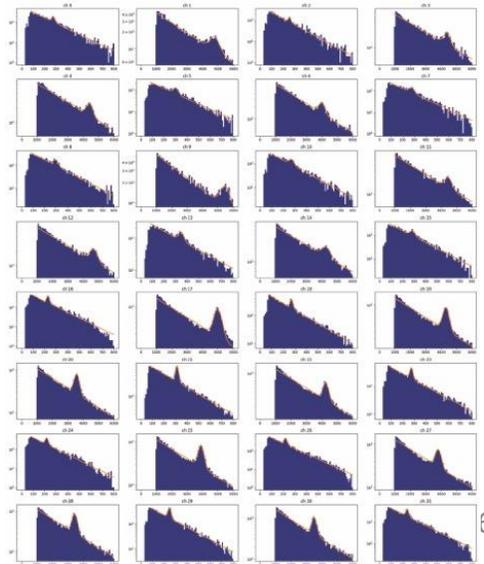

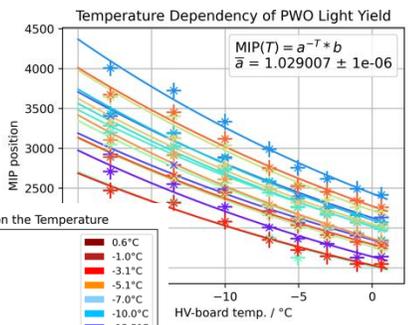

Cosmic event example

Proton event example

beam test, COSY:
protons, 2.74 GeV/c

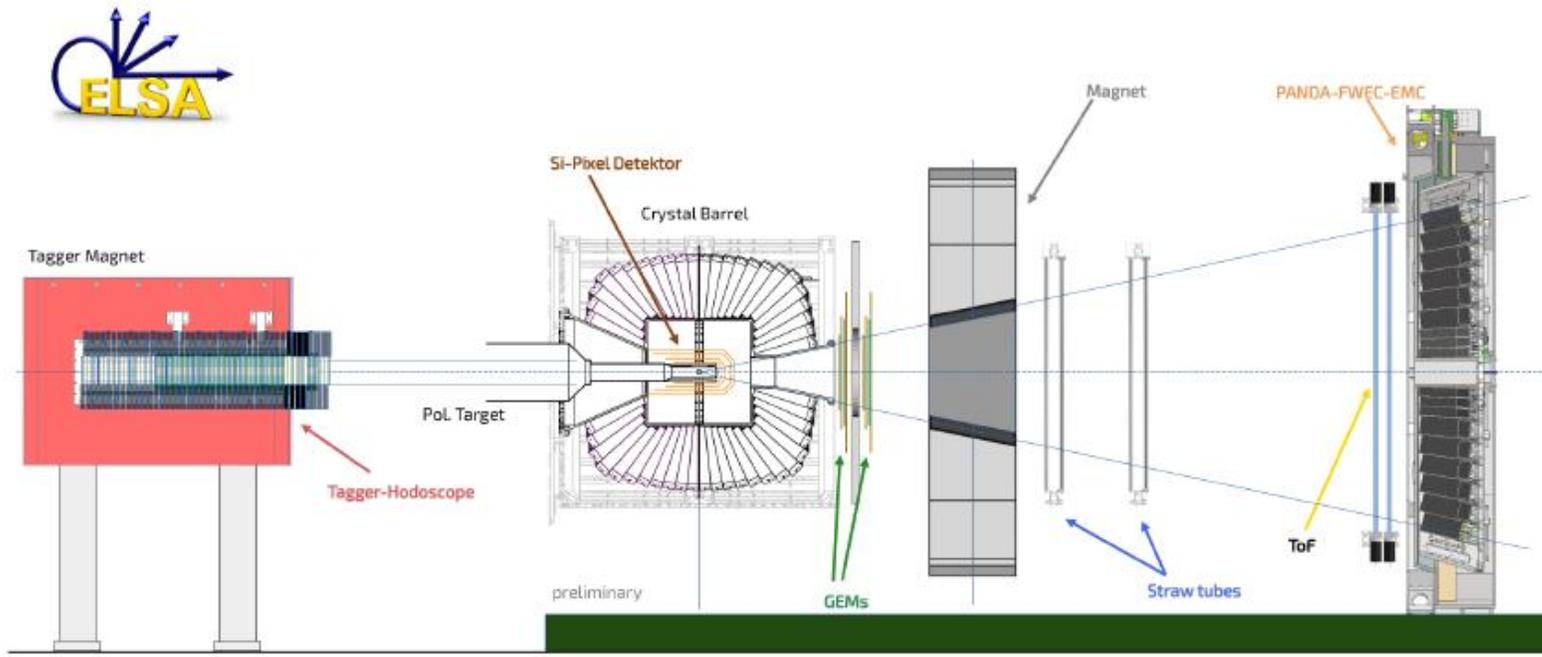

$$pp \rightarrow pp\pi^0$$

π^0 reconstructed

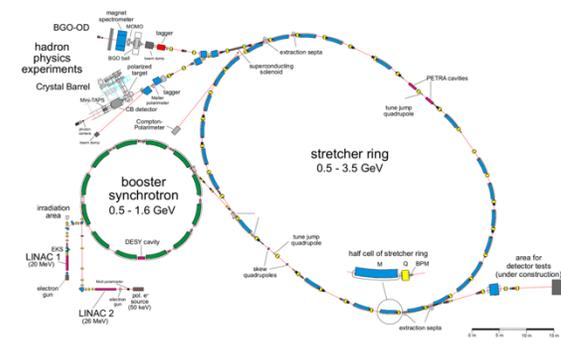

mass resolution
better than
 $\sigma \approx 5 \text{ MeV}$

Electromagnetic Calorimeter: Forward Endcap at ELSA

- UHaul to Bonn for completion **at the FTD** (Research and Technology Center for Detector Physics)
- commissioning **at ELSA**

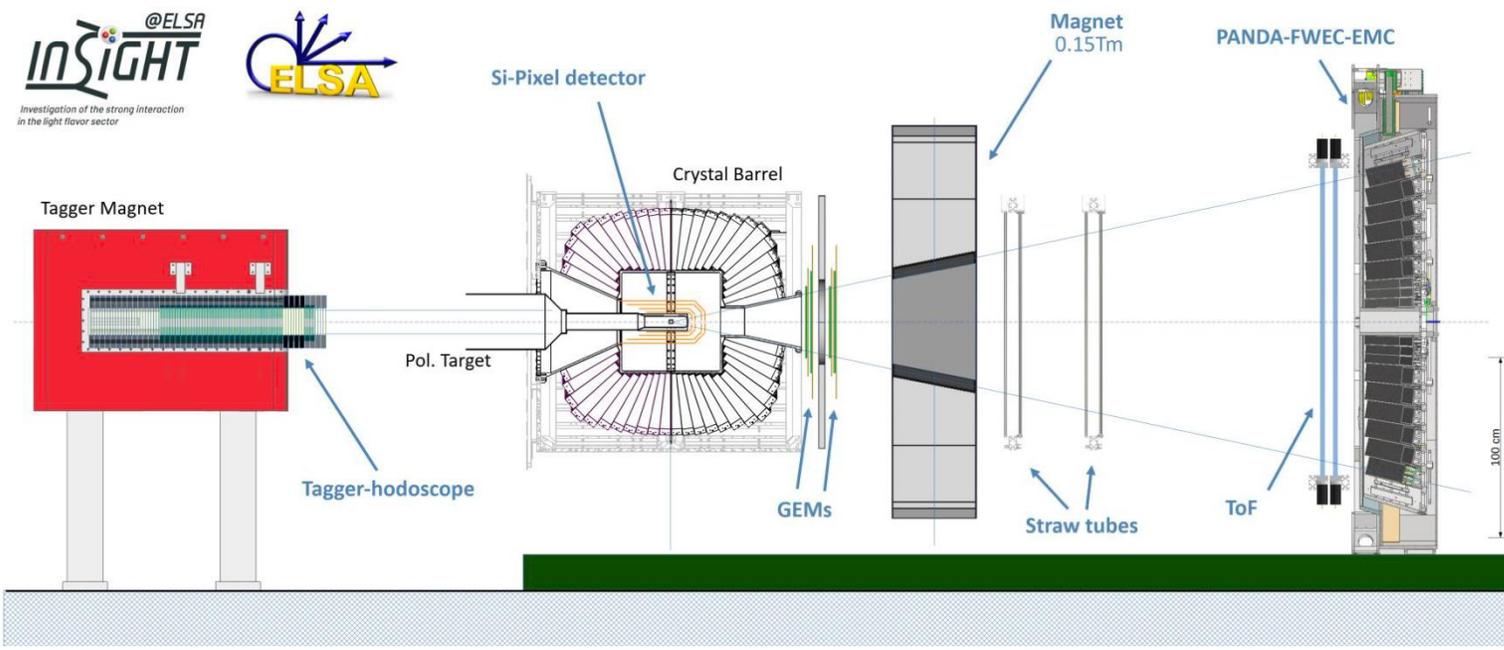

Electromagnetic Calorimeter: Forward Endcap at ELSA

ELSA: huge impact on baryon spectroscopy in the N^* and Δ sector; aspects of production, interaction and decay of strange hadrons

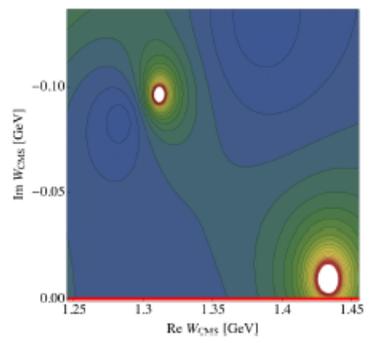

strange degrees of freedom
not yet addressed adequately!

New setup using PANDA hardware:

- decays of baryons into hyperon – kaon systems
 - hyperon spectrum
- e.g. the 2-pole structure of the $\Lambda(1405)$ not commensurate with the systematics of the quark model

● $\Lambda(1405)$: 2 pole structure
chiral unitary approach
↔ meson-baryon interaction

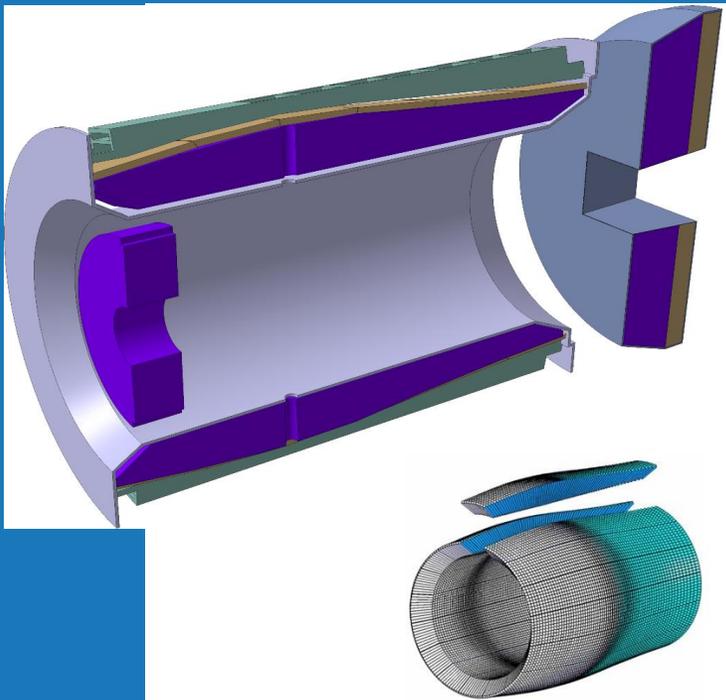

M. Mai EPJST (2021) 230:1593

$(m, \Gamma) = (1325 \pm 16, 180^{+24}_{-36}) \text{ MeV}$

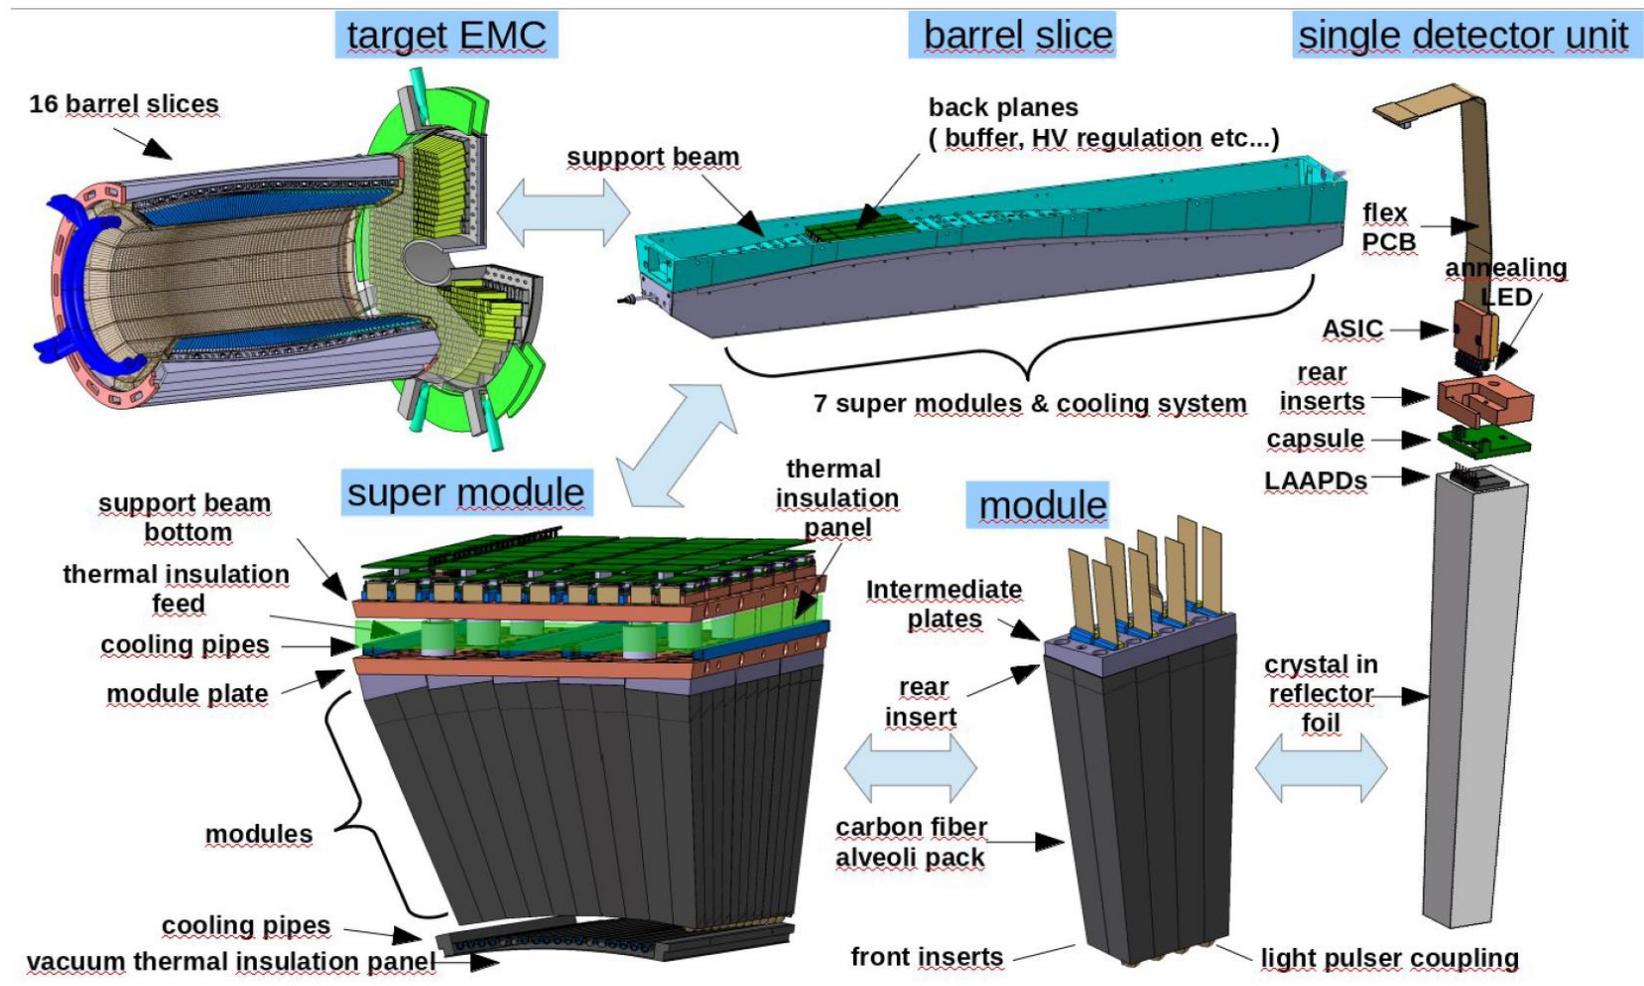

$(m, \Gamma) = (1429^{+8}_{-7}, 24^{+4}_{-6}) \text{ MeV}$

Electromagnetic Calorimeter: EMC Barrel

ErUM-FSP T08: PANDA

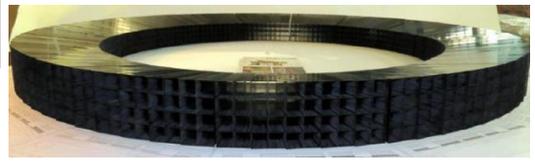

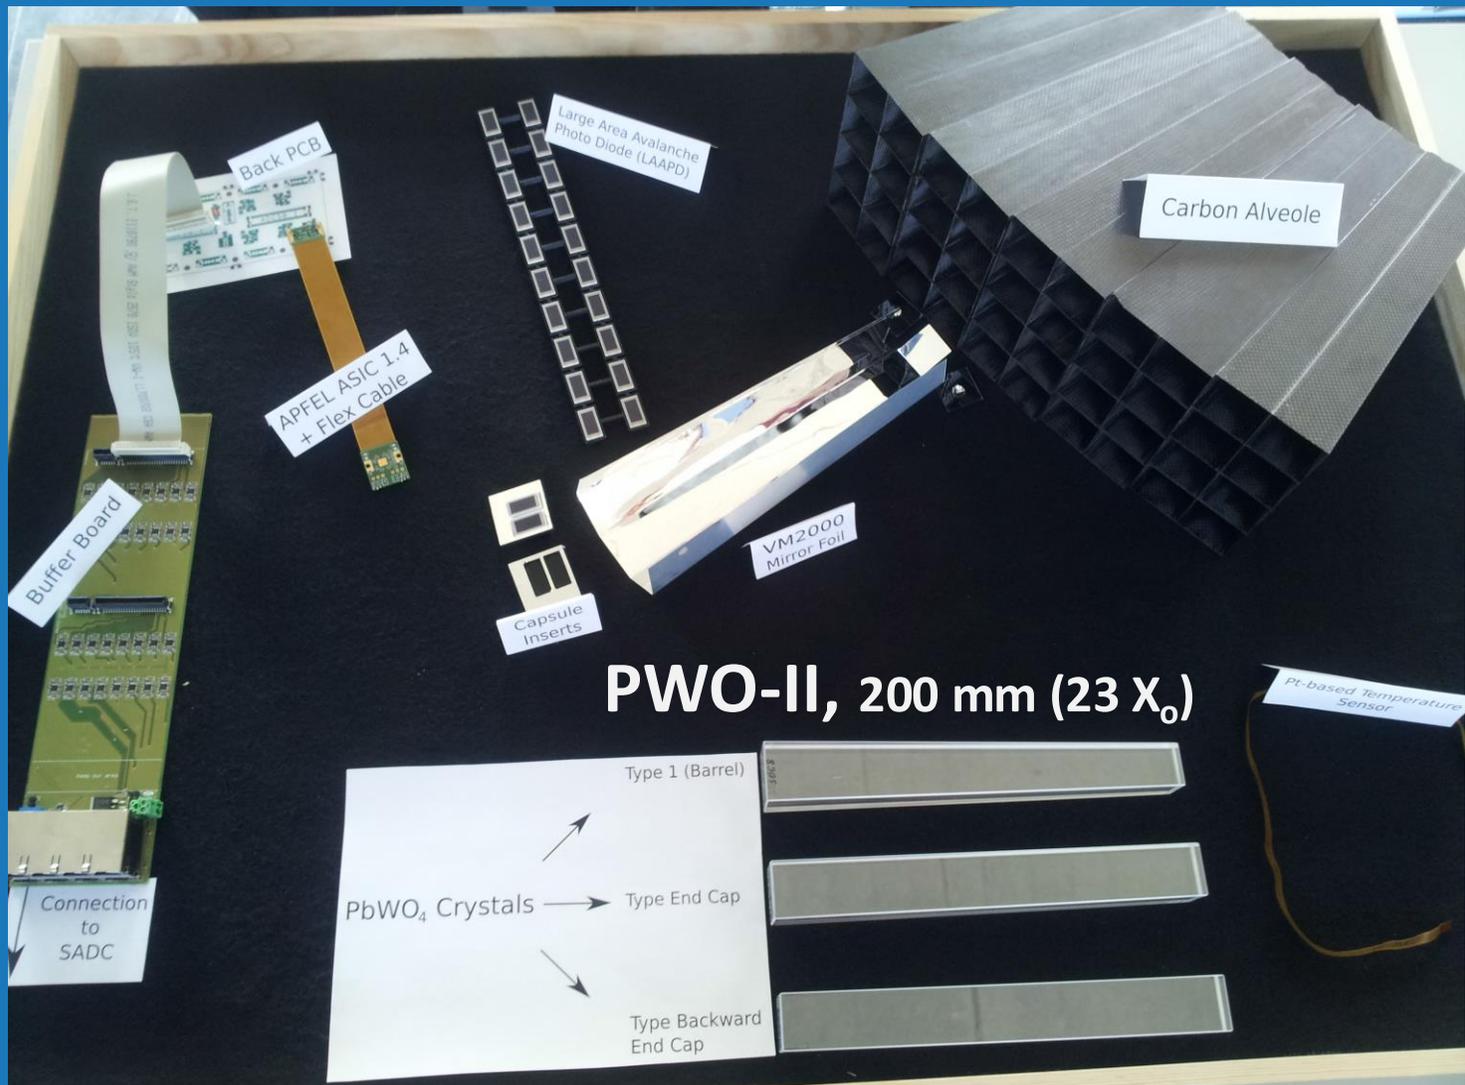

barrel (11 000 X'tals)

Electromagnetic Calorimeter: EMC Barrel

ErUM-FSP T08: PANDA

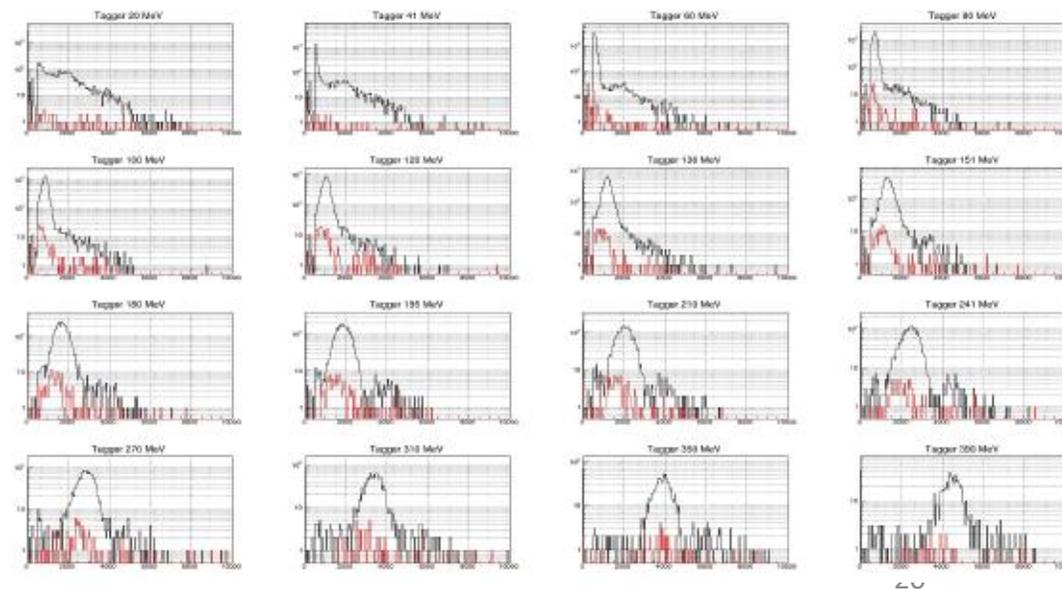

**Established for 4x4 X'tals prototype
(MAMI tagged photons, 20 to 360 MeV):**

- On-detector slow control
- On-detector front-ends (APFEL) / flexPCBs
- Data acquisition
- Time resolution

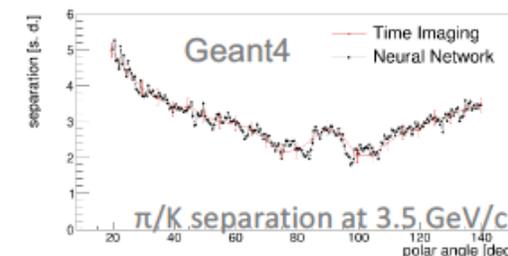

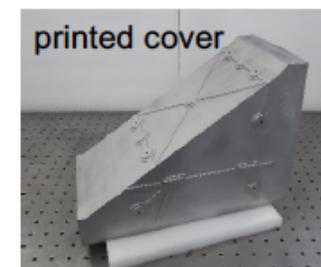

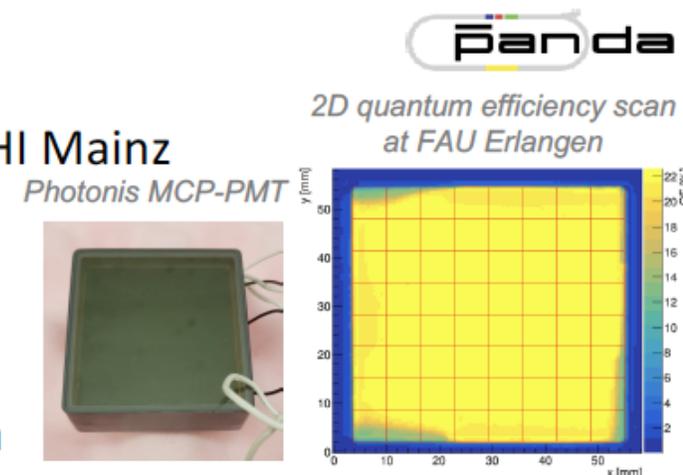

Established for slice 0:

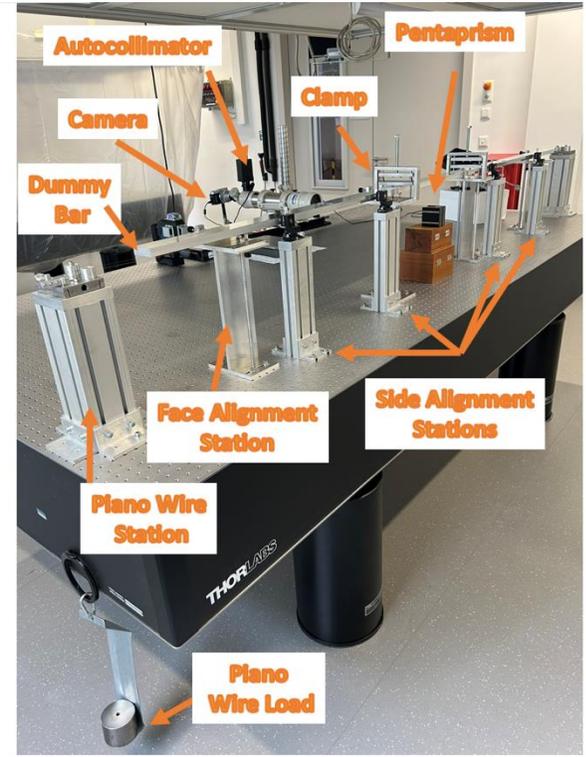

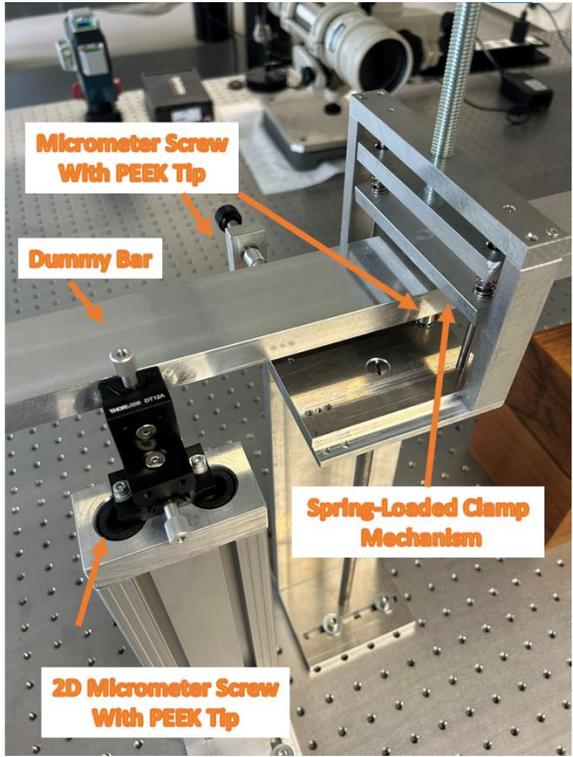

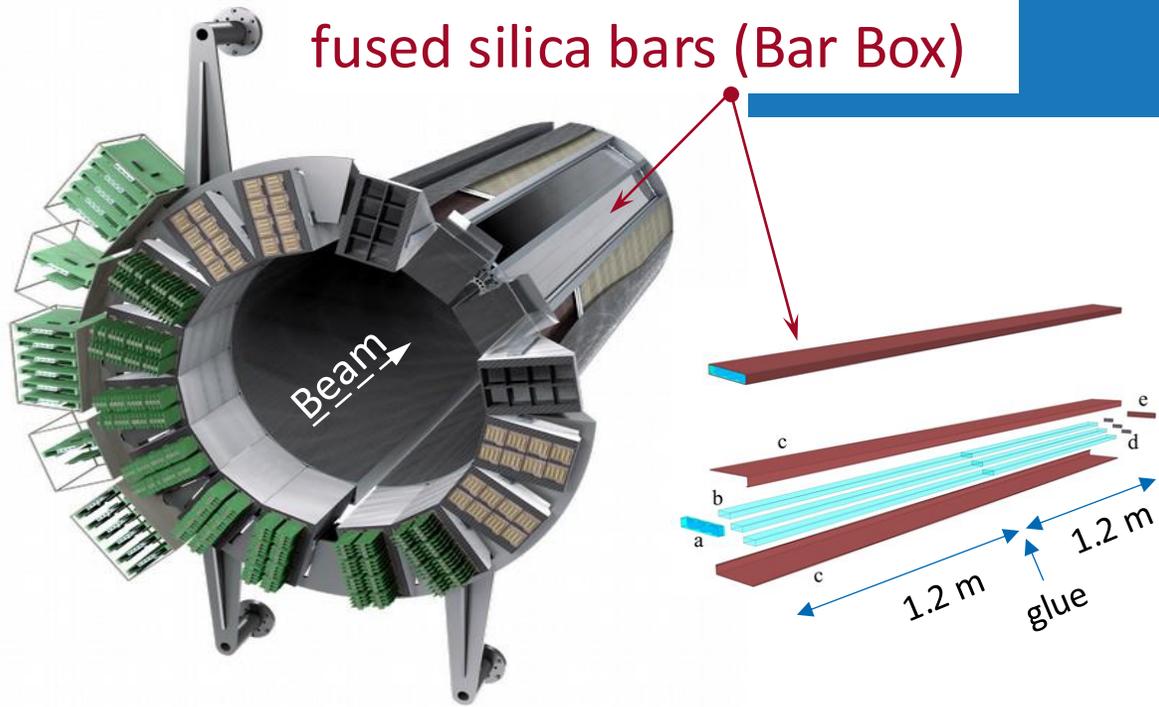

- Cooling
- On-detector slow control
- On-detector front-ends (APFEL) / flexPCBs
- Cold-space handing

cluster light output

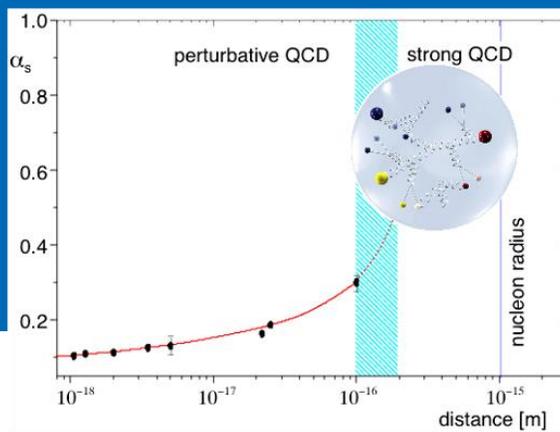

- German In-Kind contribution, 100% project construction funding via GSI
Close cooperation between GSI, FAU Erlangen, GU Frankfurt, JGU Mainz, HI Mainz
- Key component of the PANDA PID system, innovative lens-focused design
- Series production of MCP-PMT DIRC photon sensors underway (Photonis Netherlands BV), QA measurements performed at FAU Erlangen (A. Lehmann et al., supported by BMBF and GSI)
- Produced first prototype of readout module cover - 3D-printed aluminum alloy
→ will construct “vertical slice” mock-up to validate assembly strategy
- Developing methods for reconstruction/PID with machine learning
Process 3D Barrel DIRC images (image recognition, generative AI)
→ improve performance, reduce required computing resources

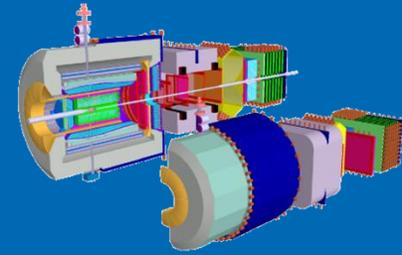

- DIRC bars to be oriented parallel before gluing
- Gap size between bars adjusted to $\sim 50 \mu\text{m}$
- Dedicated gluing jig constructed
- Autocollimator employed to confirm alignment before and after gluing (0.5 arcsec precision!)
- Strength of glue joint successfully tested

Design and construction of gluing support structure completed (technical note in preparation)

Summary

PANDA ...

- is a unique facility featuring a broad physics program employing antiprotons.
- is therefore **unique** and **complementary** to running and future experiments.
- enlists modern detector technologies.
- **is in the process of putting finalized detector parts to good use in other (hadron) physics endeavors.**

The experimental program at PANDA ...

- covers aspects of nuclear, hadron and particle physics across the transition from elementary nucleons to elementary quarks.
- puts precision spectroscopy alongside high discovery potential.

panda

**Thank You
and
Happy Holidays**
