PANDA Collaboration Meeting - Paris
10th - 14th September 2012

- Kinematics of the reaction
- Data simulation
- Analysis
 - $\bar{p}p \rightarrow \pi^+\pi^-$
 - $\bar{p}p \rightarrow \pi^+\pi^-\pi^+\pi^-$
- Outlook

Kinematics of the reaction

- Multipion analysis was relevant for Central Tracker study in order to compare the two detector setup (STT and TPC).
- The study was included in the Technical Design Report for the Straw Tube Tracker ([arXiv:1205.5441v2](https://arxiv.org/abs/1205.5441v2)).

Now we can do the same analysis using also the Forward Tracker (with Ideal Tracking), and not only with barrel.

In particular the interesting figures of merit are:

- Invariant mass resolution of $\pi^+\pi^-$ and $\pi^+\pi^-\pi^+\pi^-$
- Reconstruction efficiency of $\bar{p}p \rightarrow \pi^+\pi^-$ and $\bar{p}p \rightarrow \pi^+\pi^-\pi^+\pi^-$
- Vertex resolution

How results are affected by Forward Tracker?

Data simulation

Energy in the center of mass system: 3.07 GeV; $p_z=4.0$ GeV

Cross section reference from: V. Flaminio, CERN-HERA 84-01:

- $\bar{p}p \rightarrow \pi^+\pi^-$: $\sigma=0.007$ mb at $E_{CM} = 3.07$ GeV
- $\bar{p}p \rightarrow \pi^+\pi^-\pi^+\pi^-$: $\sigma=0.43$ mb at $E_{CM} = 2.954$ GeV

- Event generation is performed with EvtGen event generator using PHSP decay model
- MonteCarlo simulation, digitization and reconstruction is performed within pandaroot framework
- PID is based on MonteCarlo Truth information
- 1.000 events were produced.

- Analysis is performed with PndAnalysis
- No background suppression is studied
- Events with $2.07 \text{ GeV} < m(\pi^+\pi^-) < 4.07 \text{ GeV}$ are selected
- Events with $2.57 \text{ GeV} < m(\pi^+\pi^-\pi^+\pi^-) < 3.57 \text{ GeV}$ are selected
- Vertex fit is performed and best candidate in each event is selected by minimal χ^2

$$\bar{p}p \rightarrow \pi^+ \pi^-$$

Pion momentum distributions

The majority of pions has:

- momentum between 1 GeV/c and 4 GeV/c
- polar angular range between 0.4 rad and 1.1 rad.

Invariant mass distribution

STT+MVD+GEM

Resolution ~ 58 MeV
Efficiency $\sim 76\%$

STT+MVD+GEM+FTS

Resolution ~ 67 MeV
Efficiency $\sim 75\%$

Efficiency=Number of reconstructed events/ number of generated events.

STT+MVD+GEM

$\sigma_x \sim 49 \mu\text{m}$; $\sigma_y \sim 47 \mu\text{m}$; $\sigma_z \sim 60 \mu\text{m}$;

STT+MVD+GEM+FTS

$\sigma_x \sim 55 \mu\text{m}$; $\sigma_y \sim 48 \mu\text{m}$; $\sigma_z \sim 60 \mu\text{m}$;

$$\bar{p}p \rightarrow \pi^+\pi^-\pi^+\pi^-$$

Pion momentum distributions

The majority of pions has:

- momentum between 0.5 GeV/c and 2.5 GeV/c
- polar angular range between 0.4 rad and 1.1 rad.

Invariant mass distribution

STT+MVD+GEM

Resolution ~ 47 MeV
Efficiency $\sim 49\%$

STT+MVD+GEM+FTS

Resolution ~ 40 MeV
Efficiency $\sim 59\%$

Efficiency=Number of reconstructed events/ number of generated events.

STT+MVD+GEM

$$\sigma_x : \sim 47 \mu\text{m}; \sigma_y : \sim 43 \mu\text{m}; \sigma_z : \sim 62 \mu\text{m};$$

STT+MVD+GEM+FTS

$$\sigma_x : \sim 51 \mu\text{m}; \sigma_y : \sim 43 \mu\text{m}; \sigma_z : \sim 55 \mu\text{m};$$

General comment: maybe we need to do the same study with more statistics.

	$\bar{p}p \rightarrow \pi^+\pi^-$		$\bar{p}p \rightarrow \pi^+\pi^-\pi^+\pi^-$	
	NO FTS	WITH FTS	NO FTS	WITH FTS
Invariant mass resolution	58 MeV	67 MeV	47 MeV	40 MeV
