# Rapidity

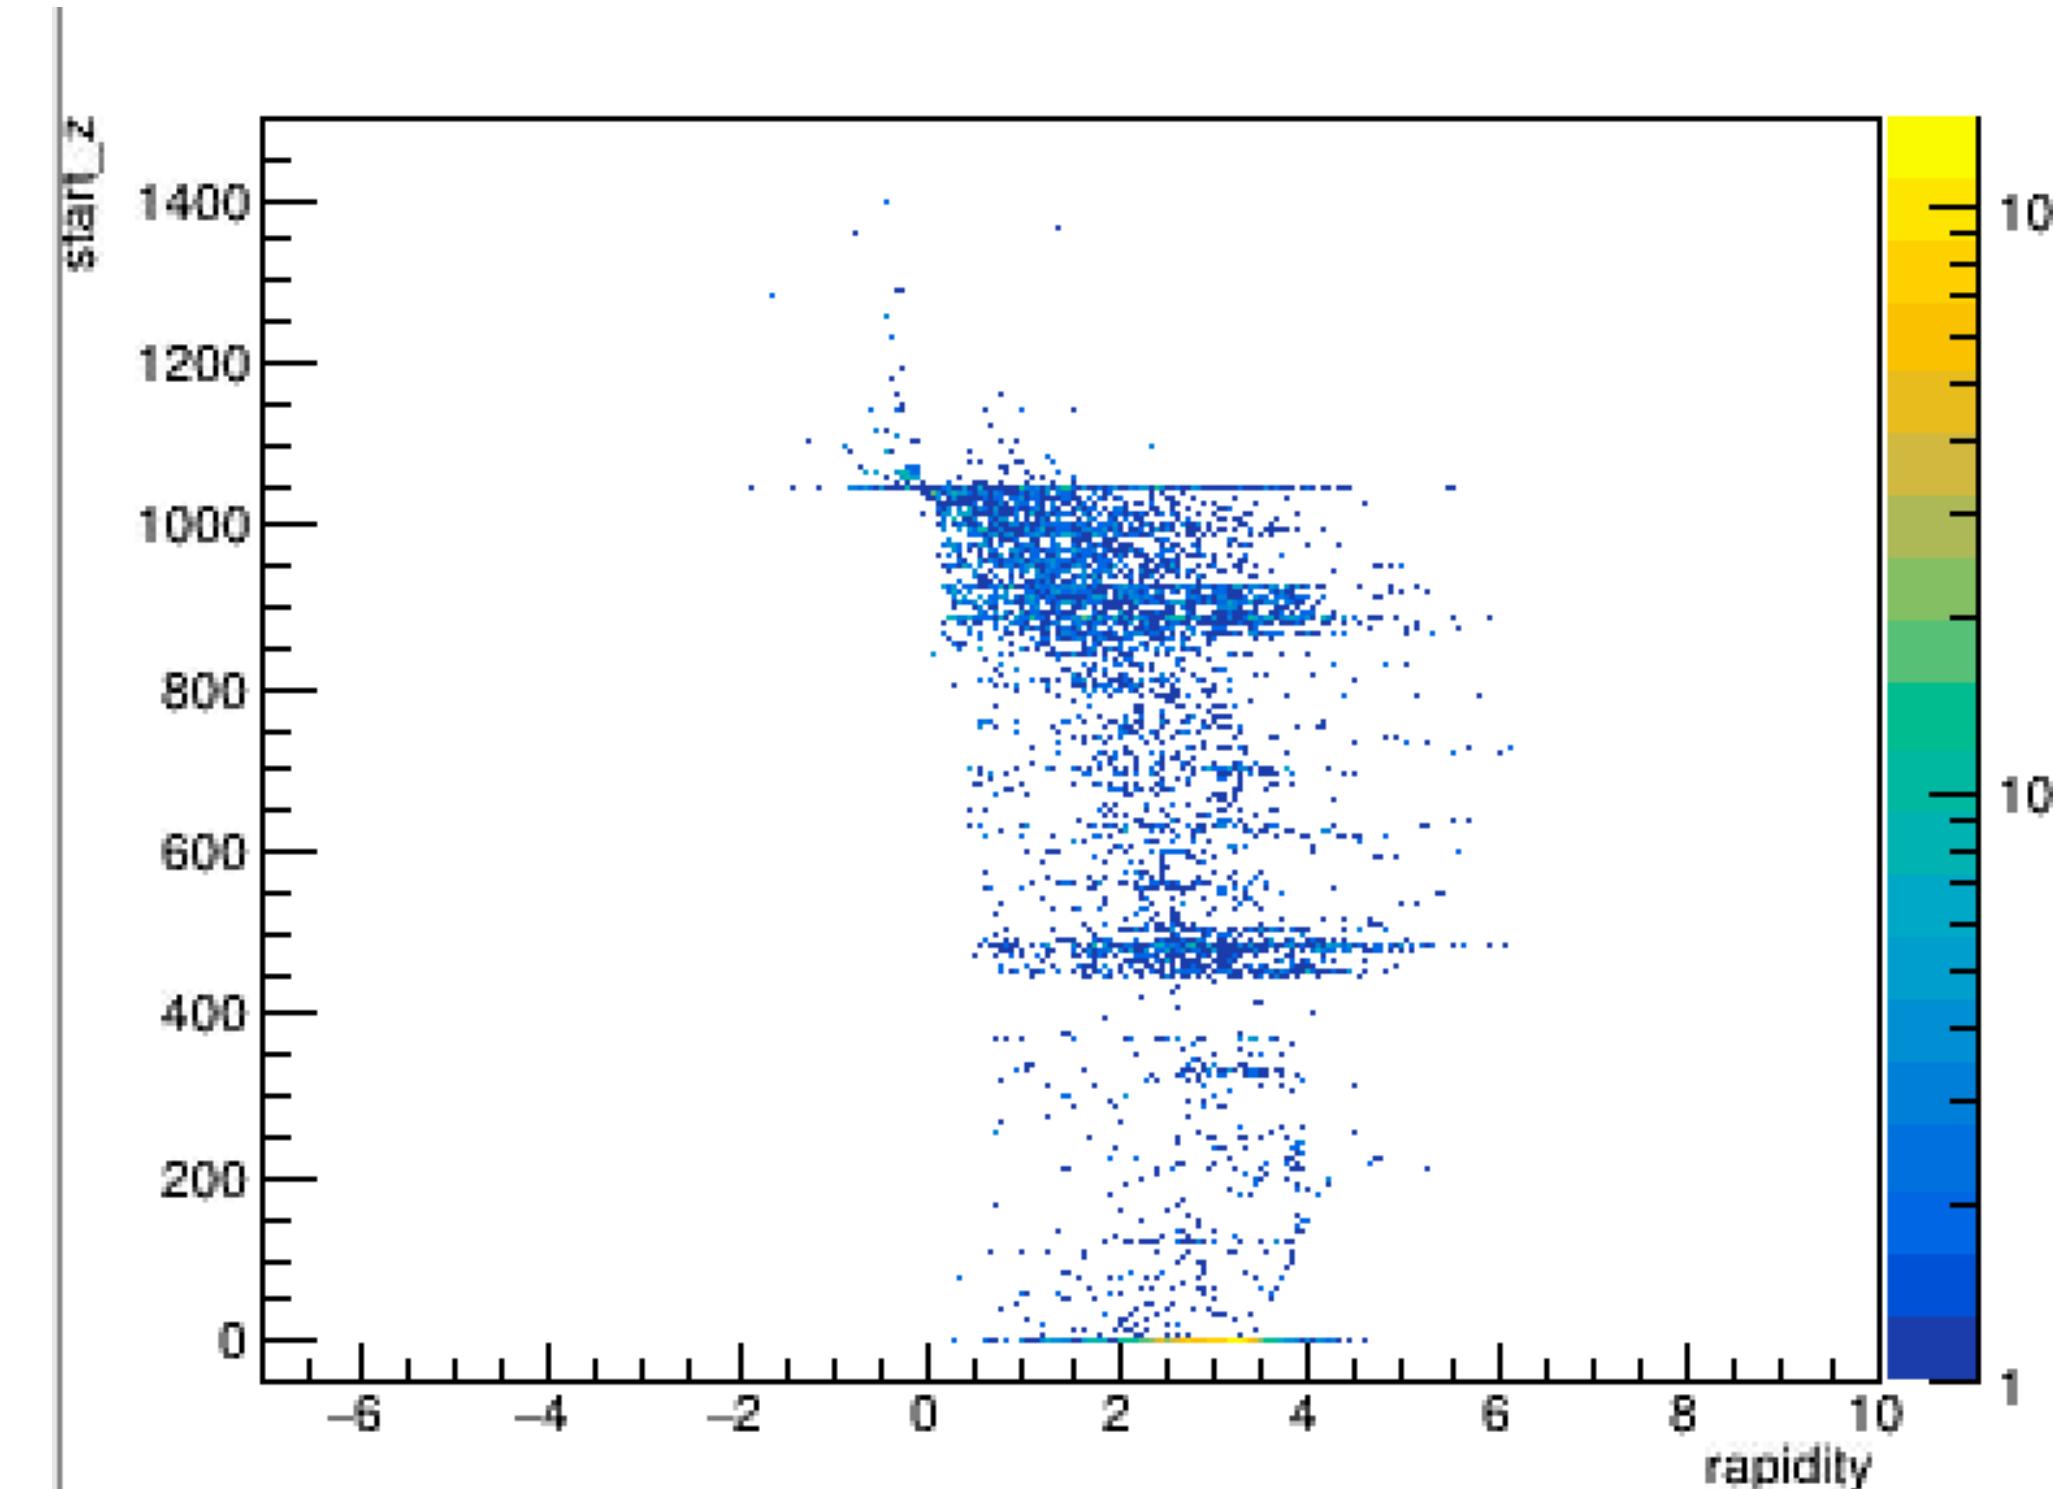

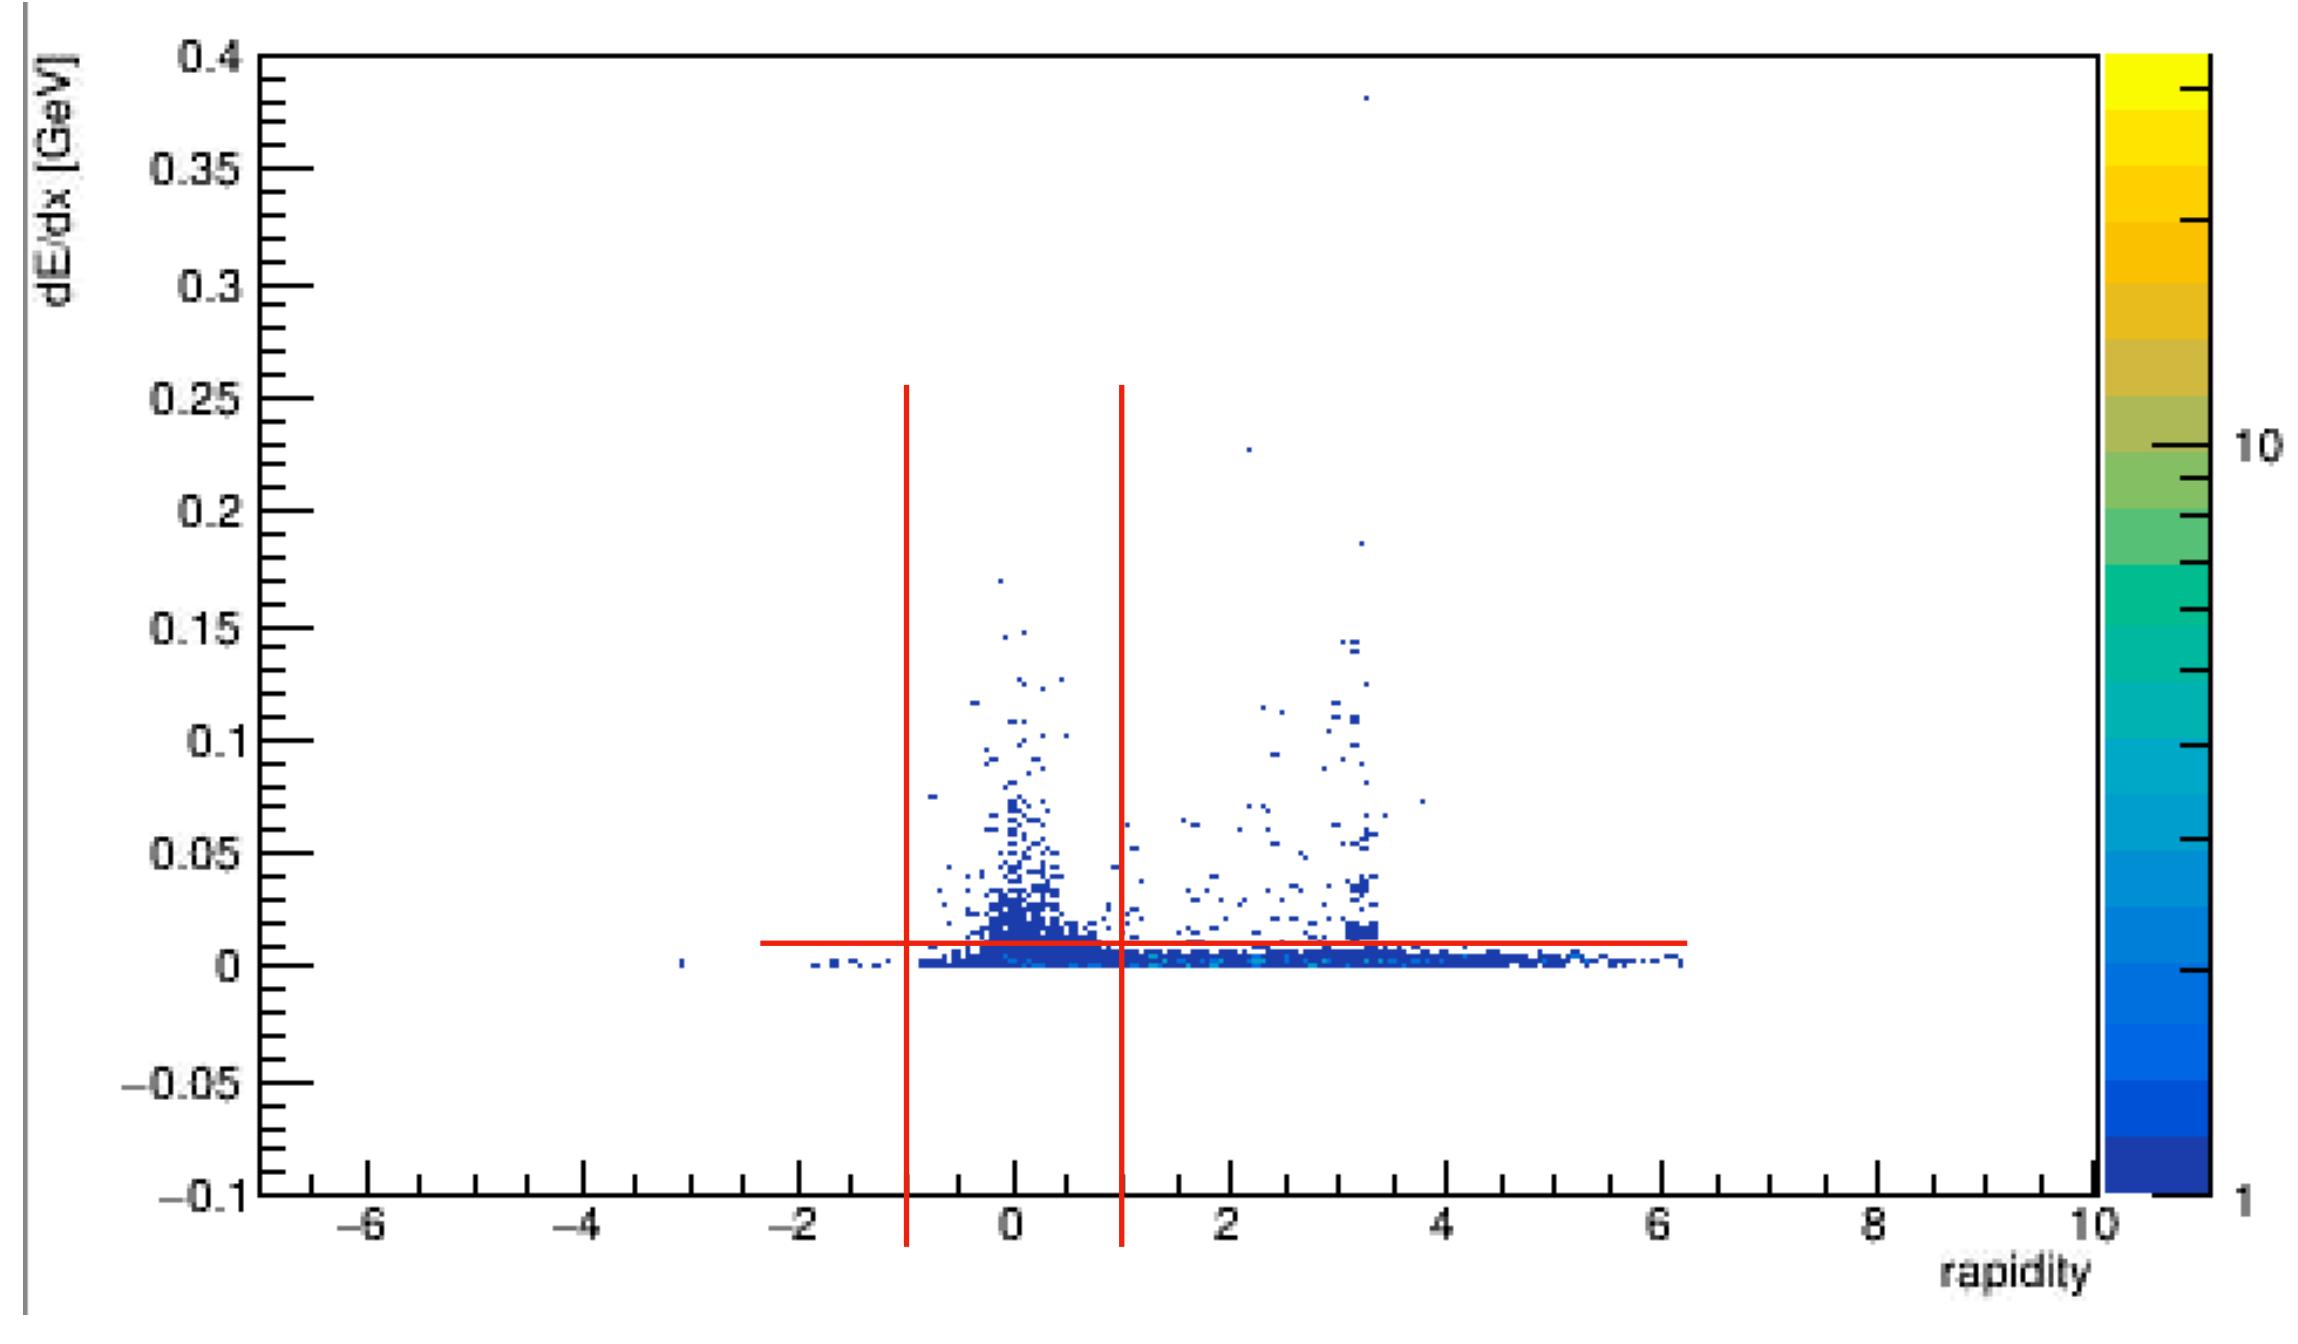

# PID

- PID of simulated particles with FSD point
- Mainly electrons and protons

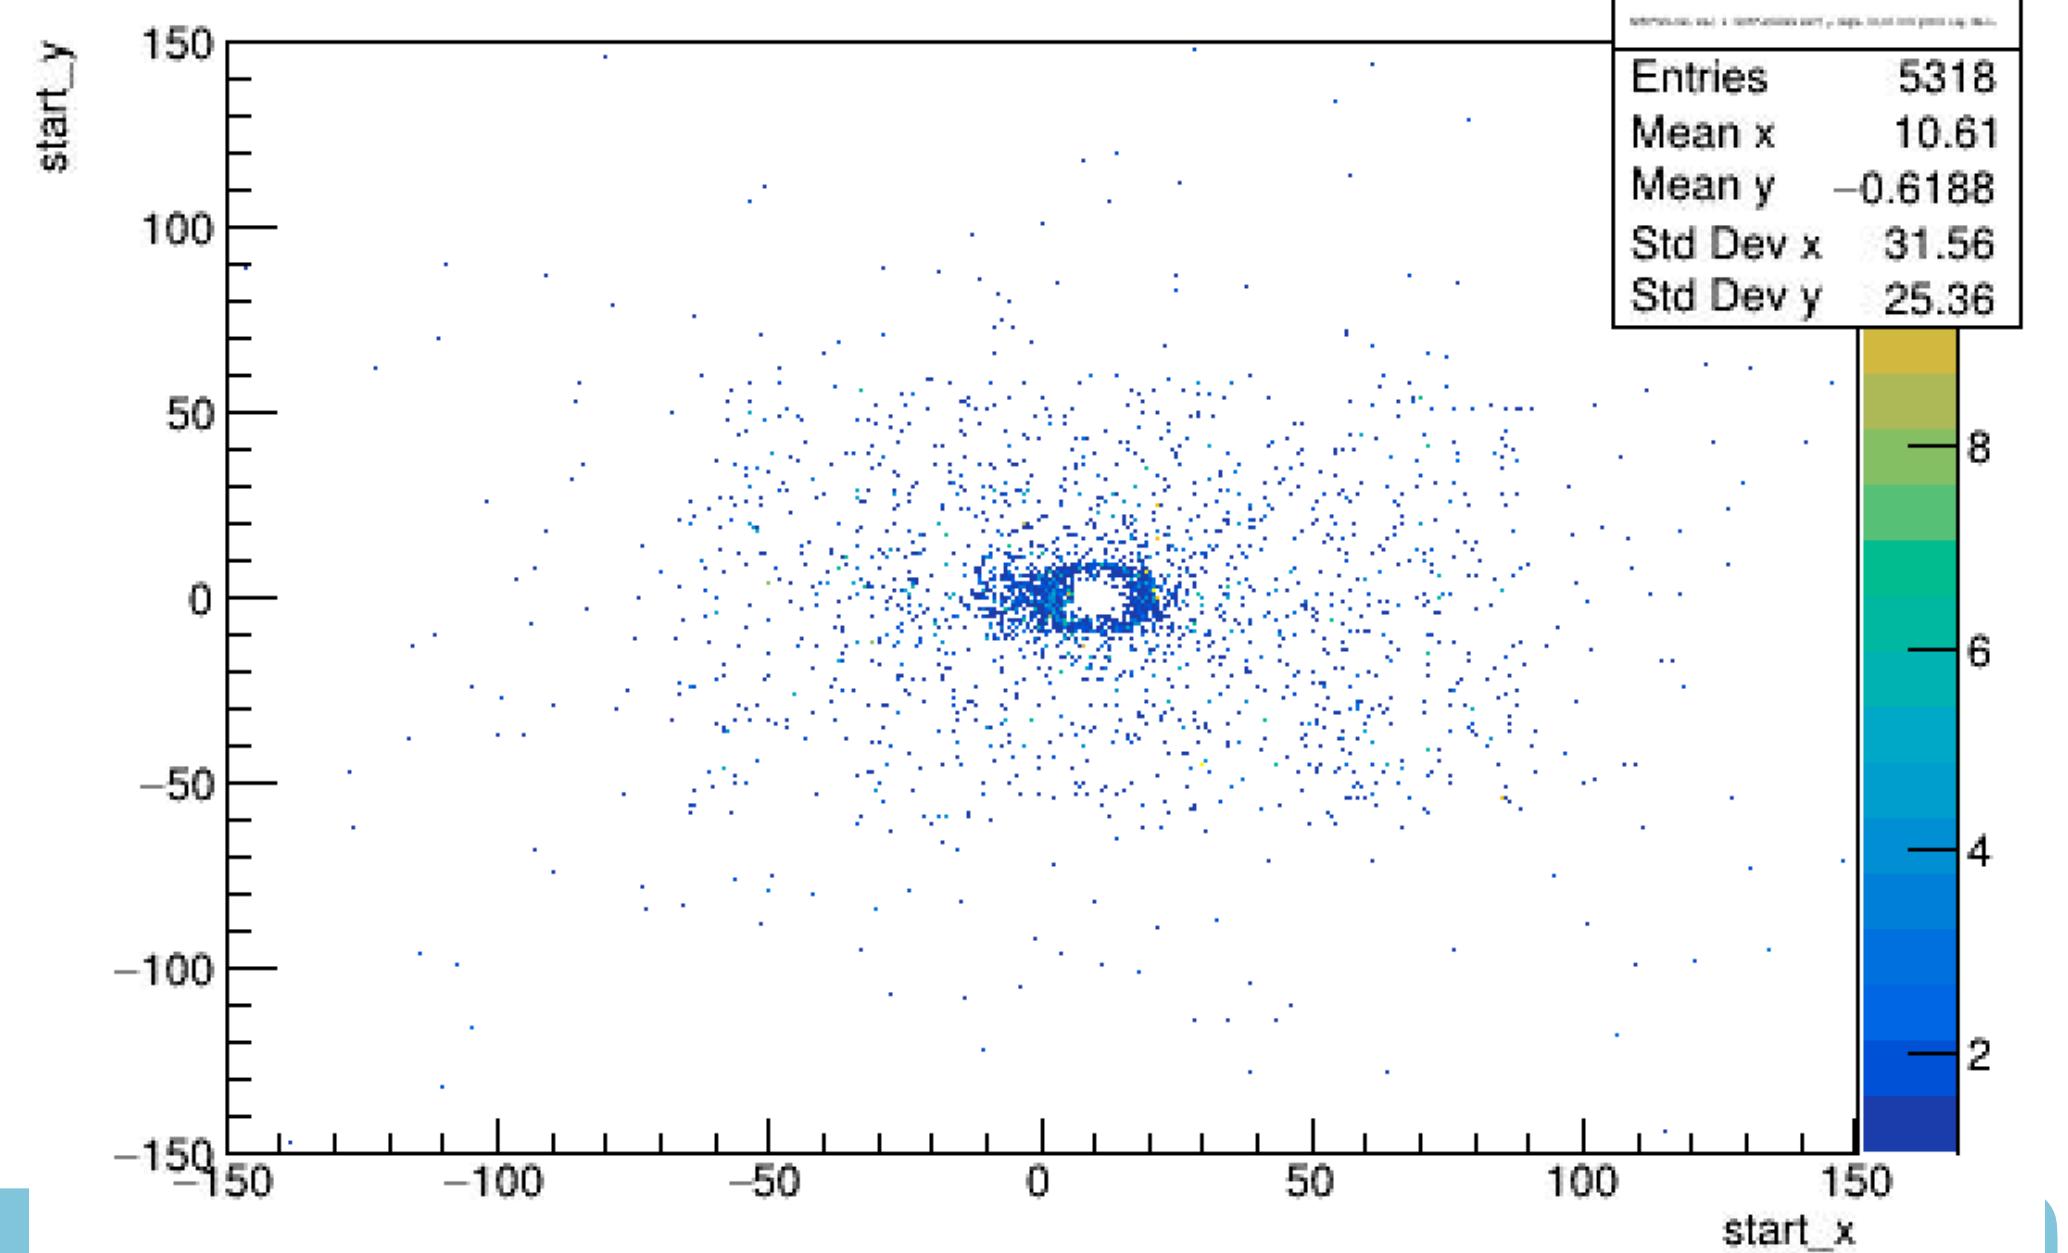

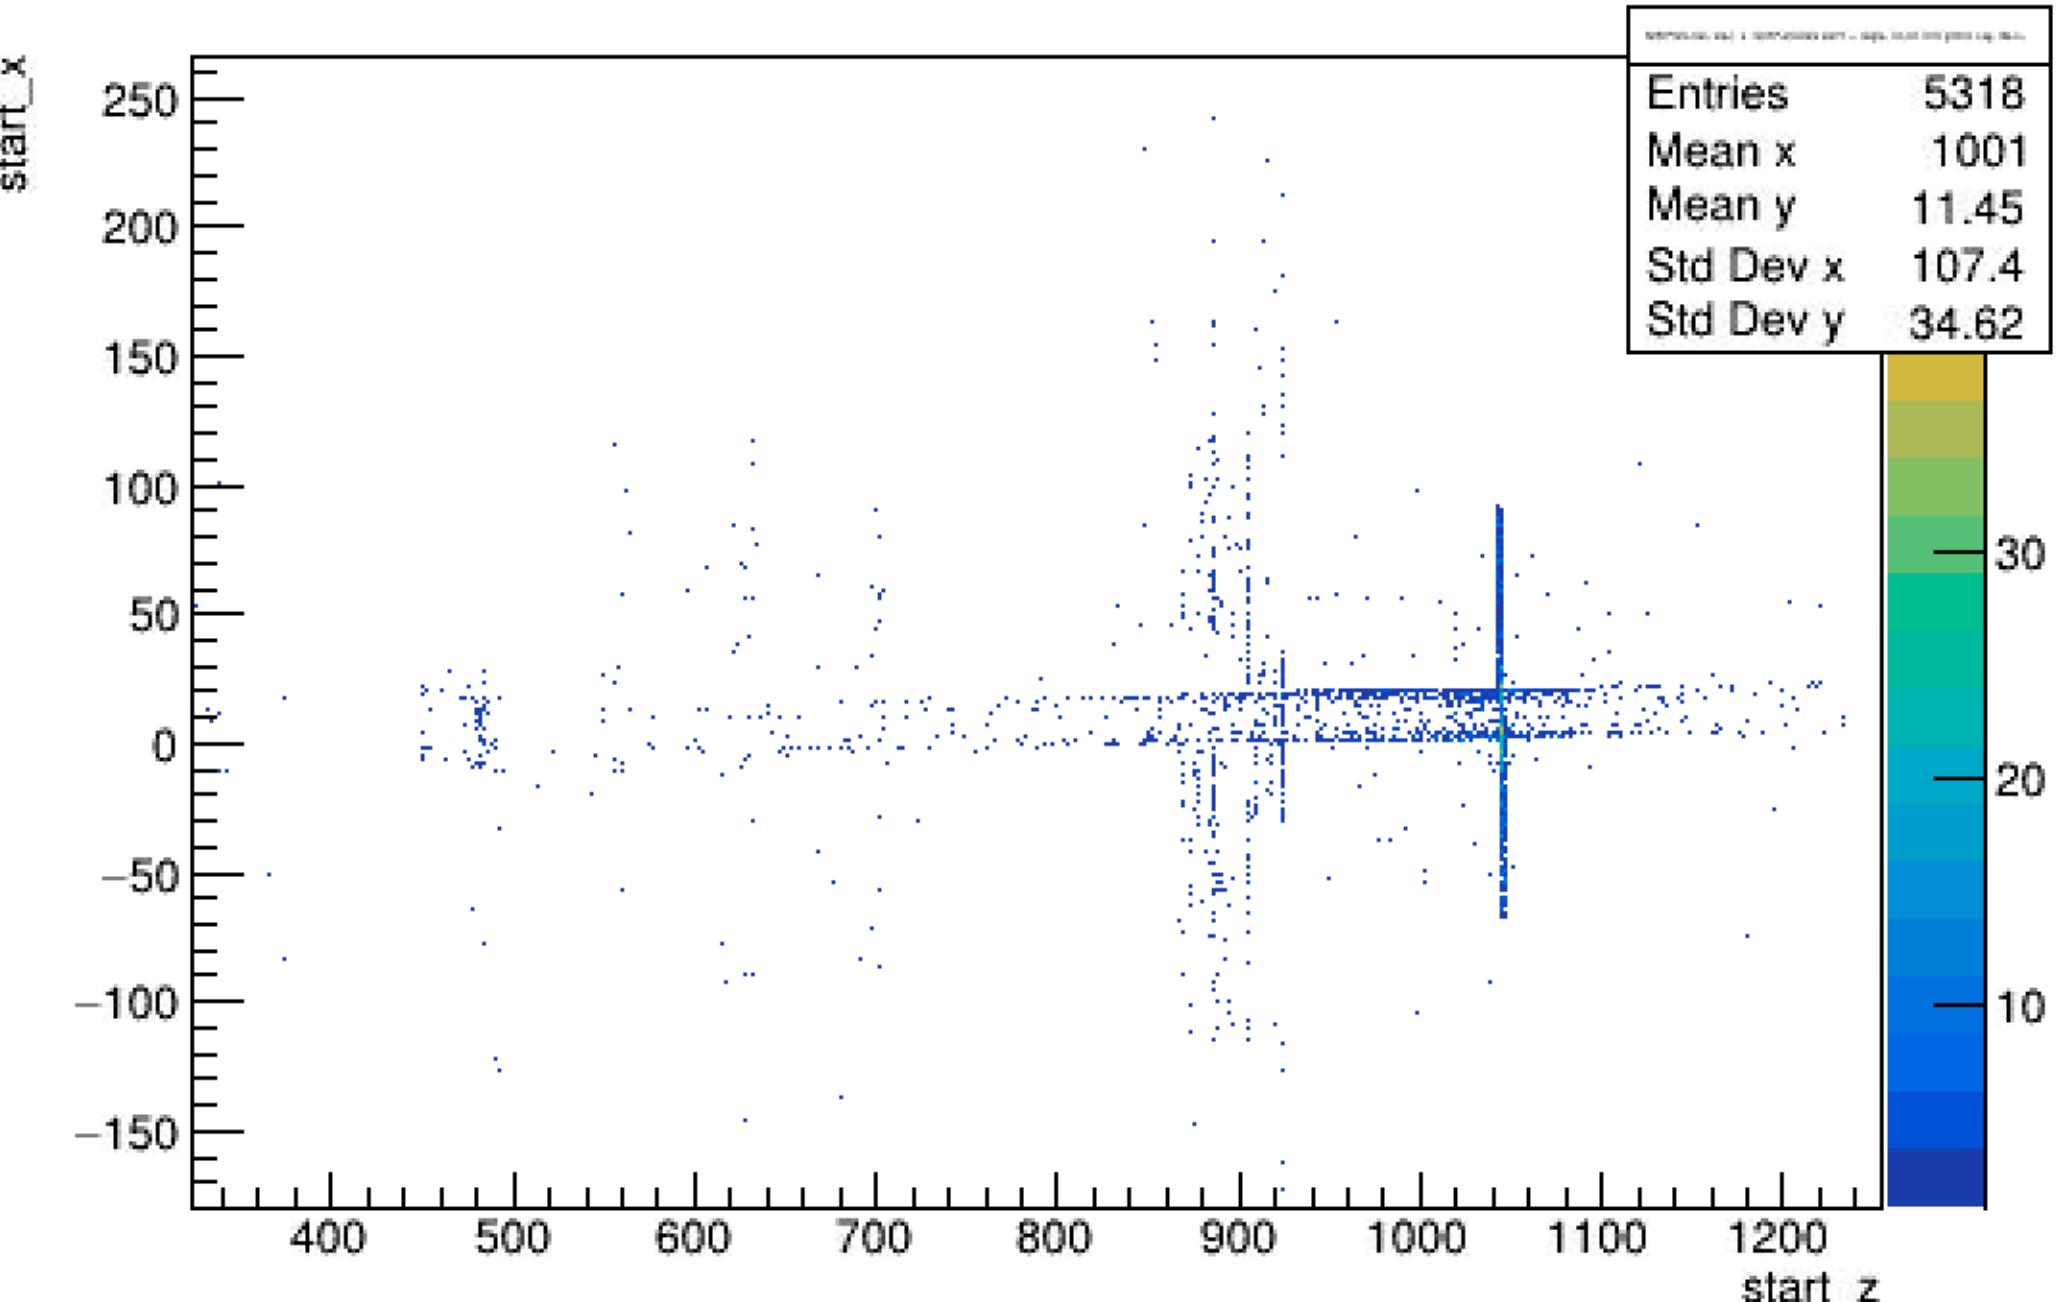

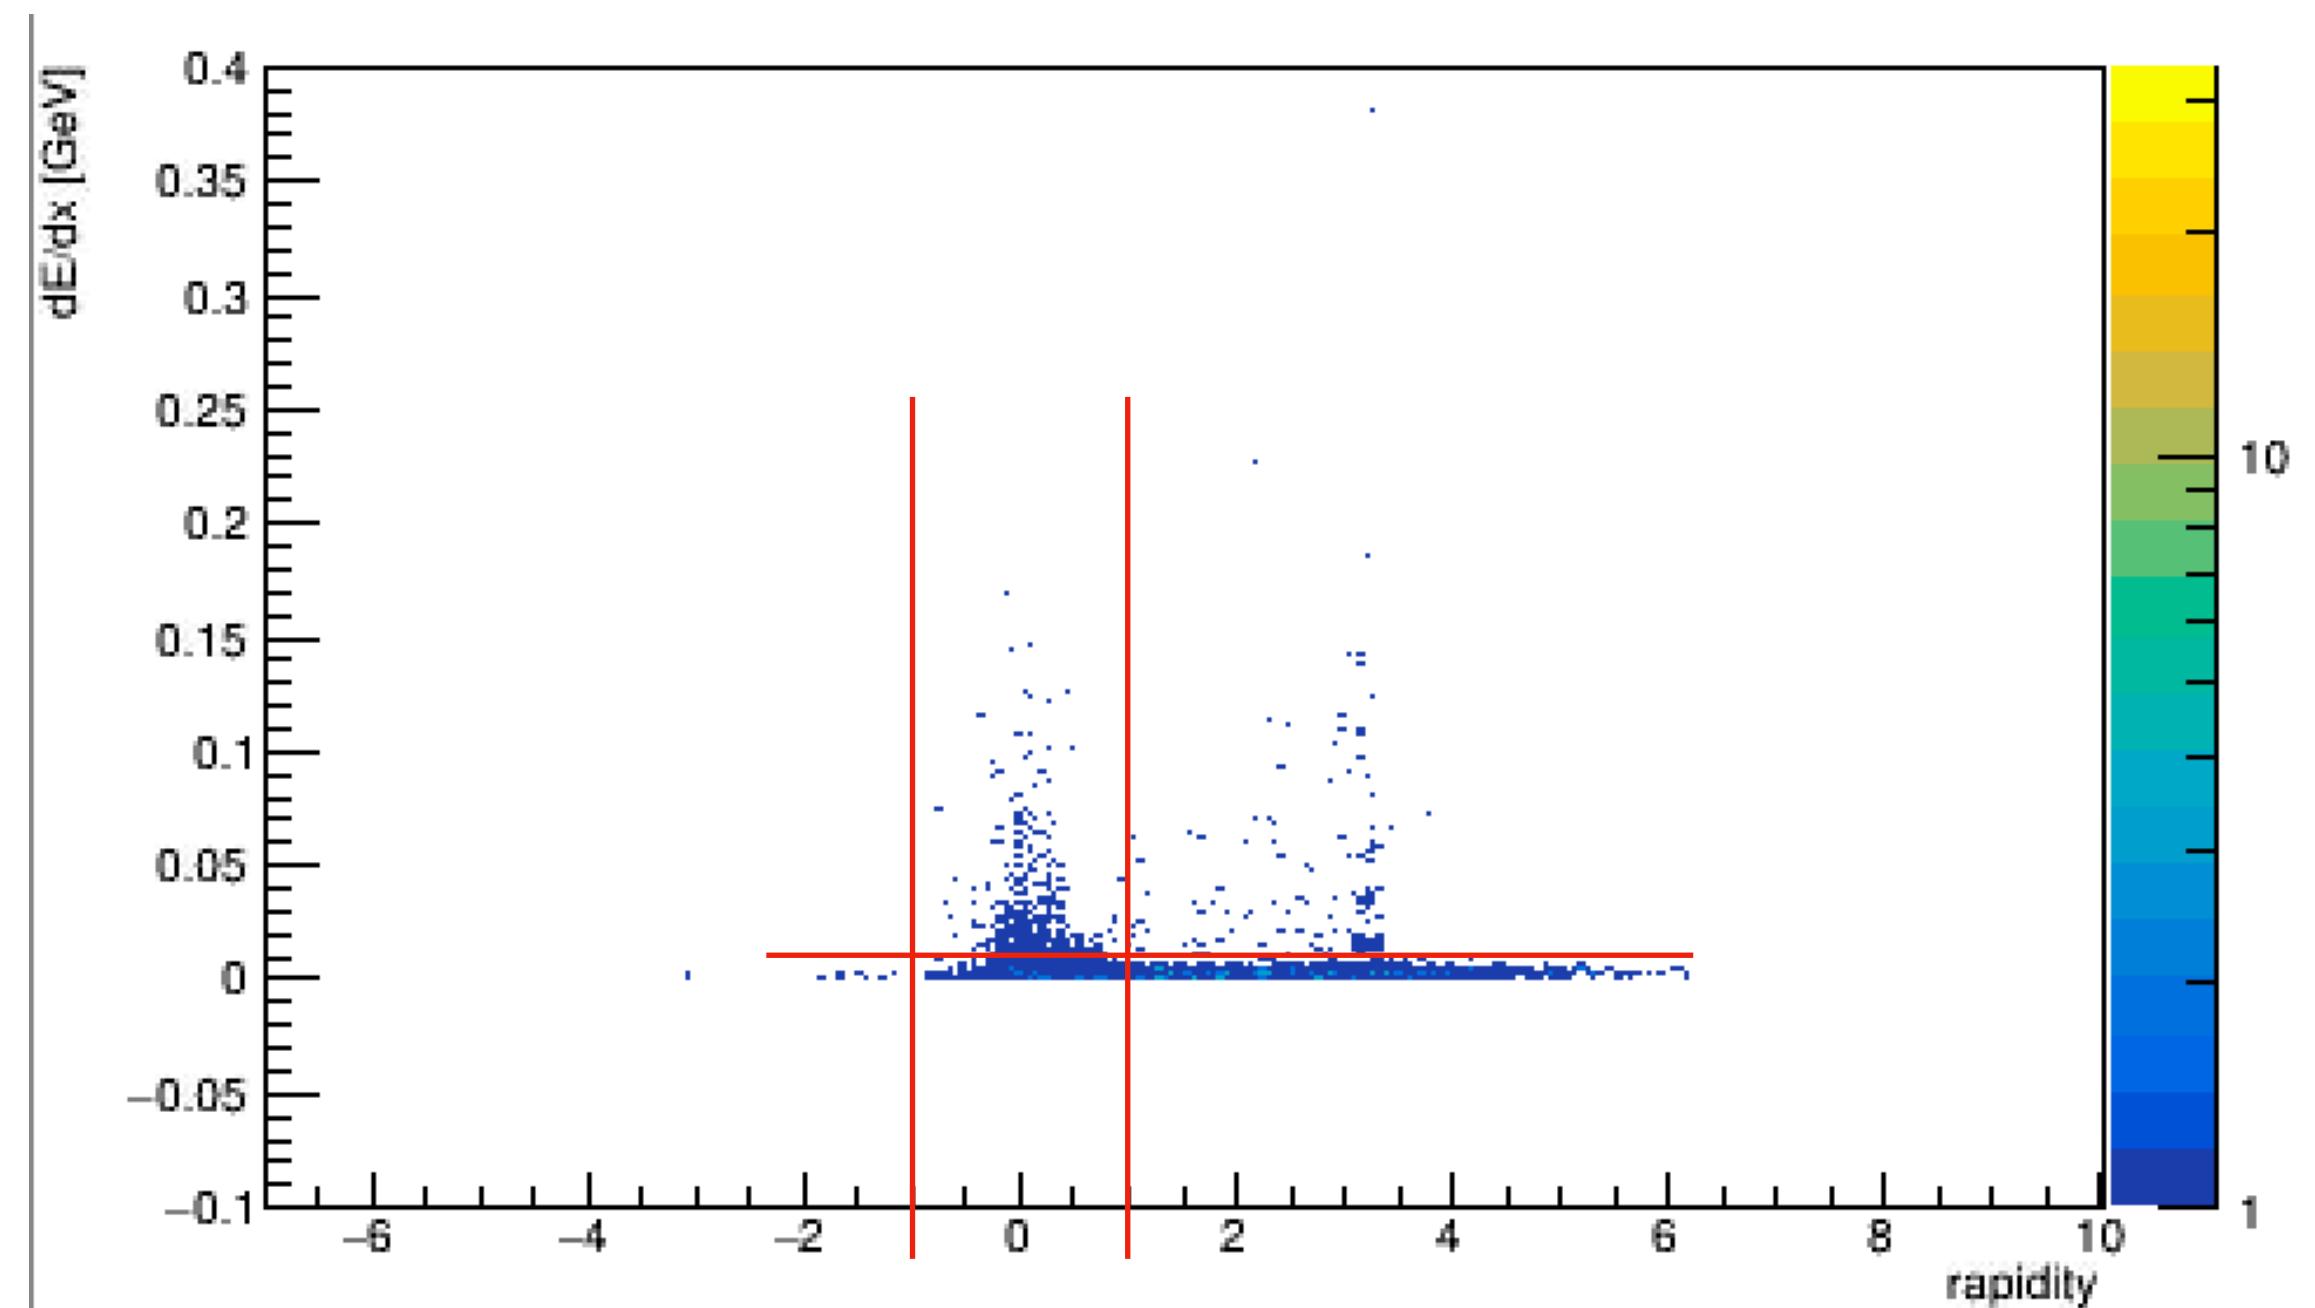

# Sim particles - dEdx, z position

- Sim particles with point in FSD, no overlaps

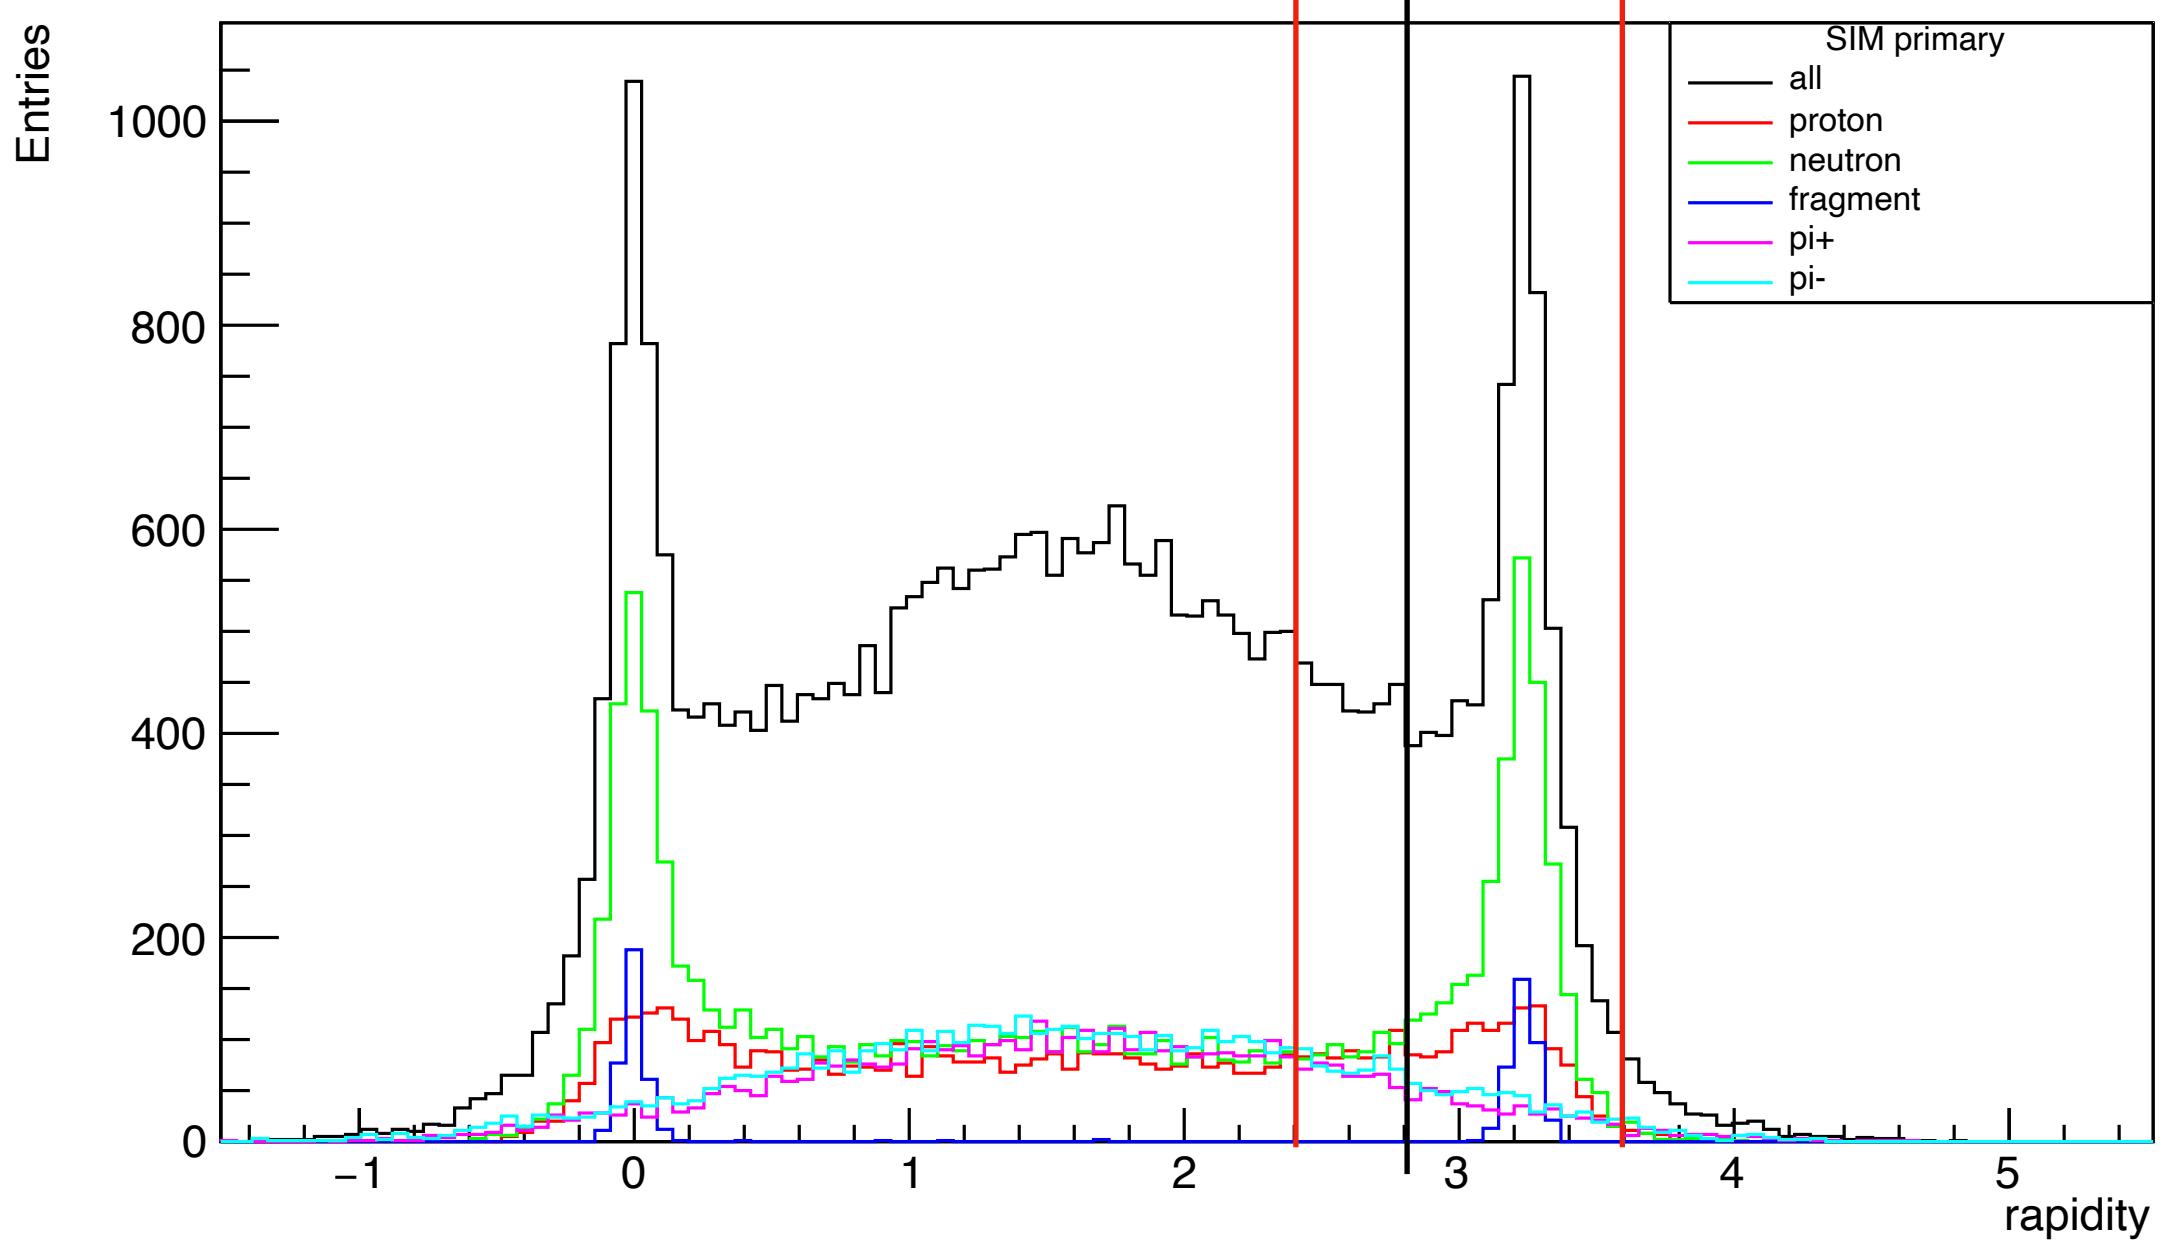

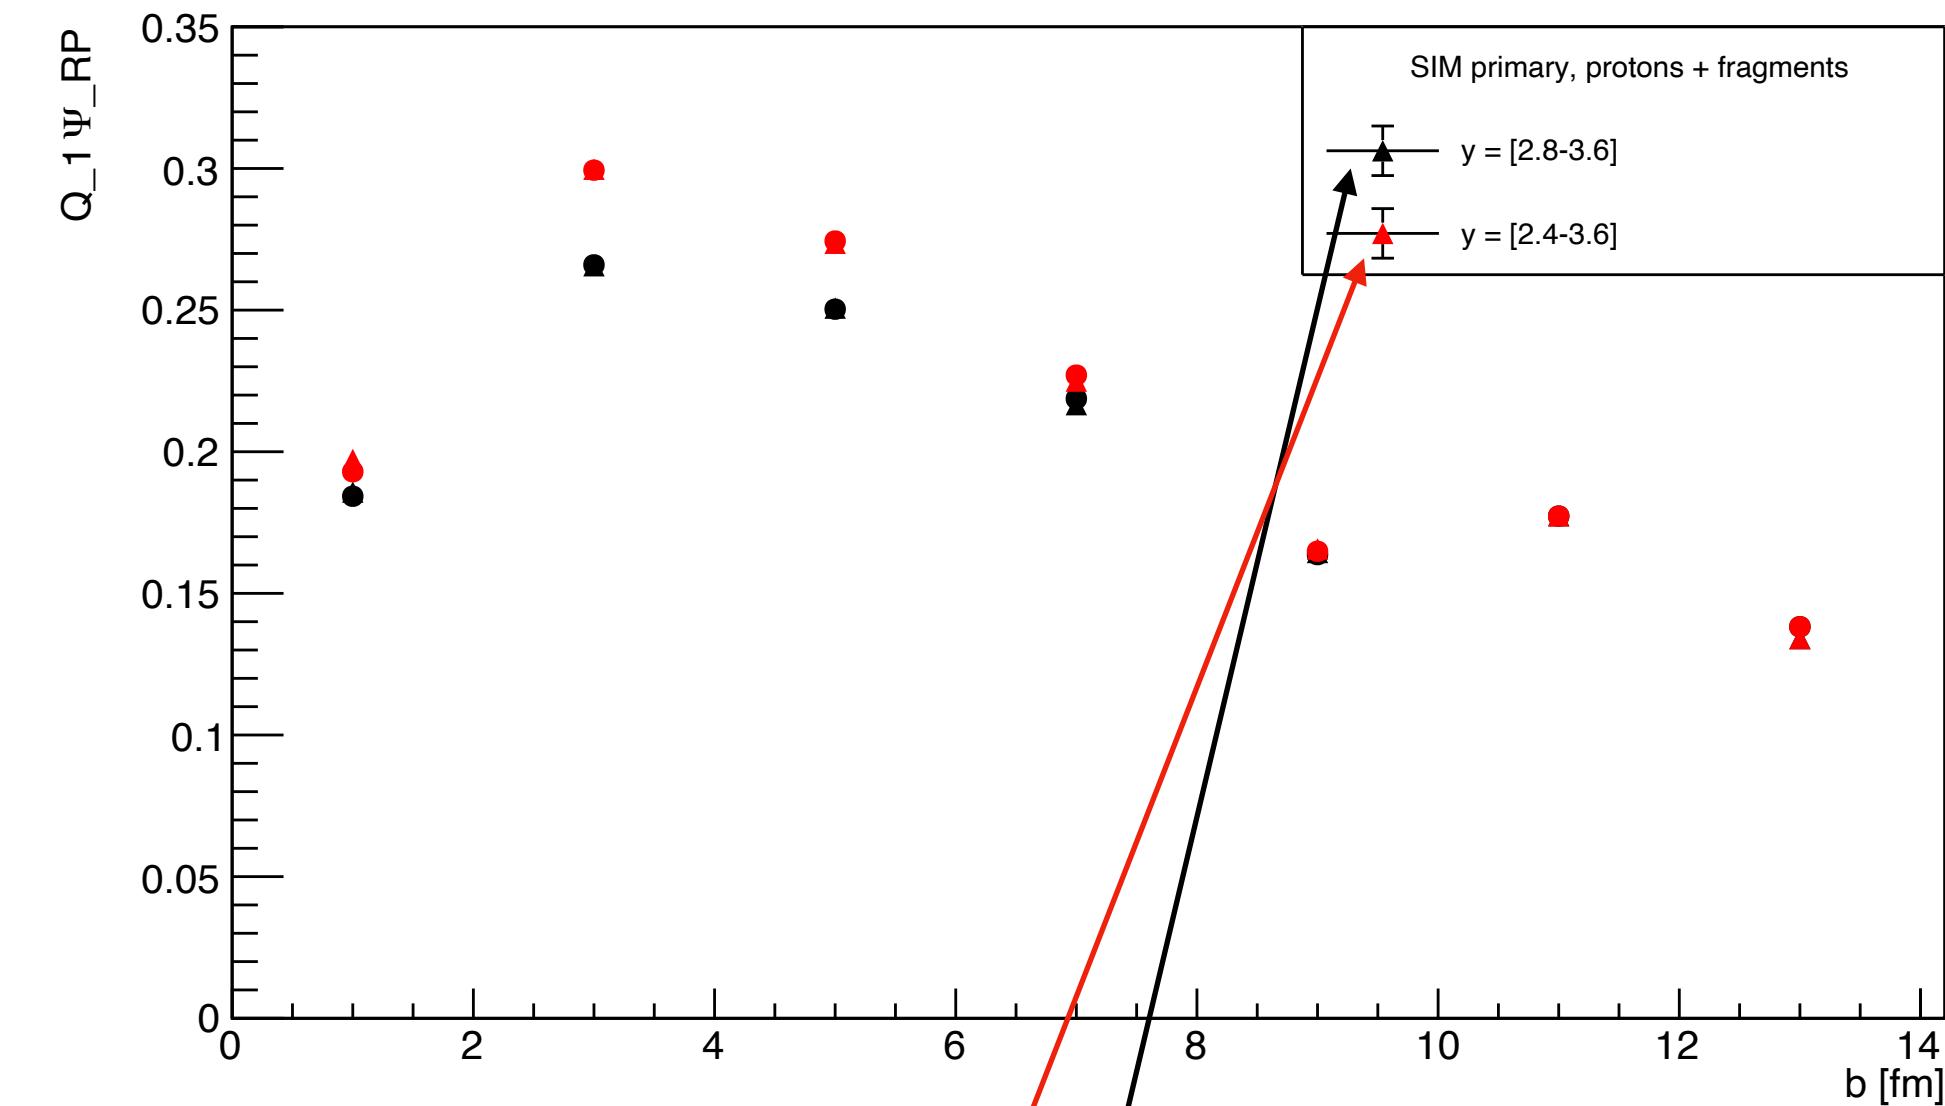

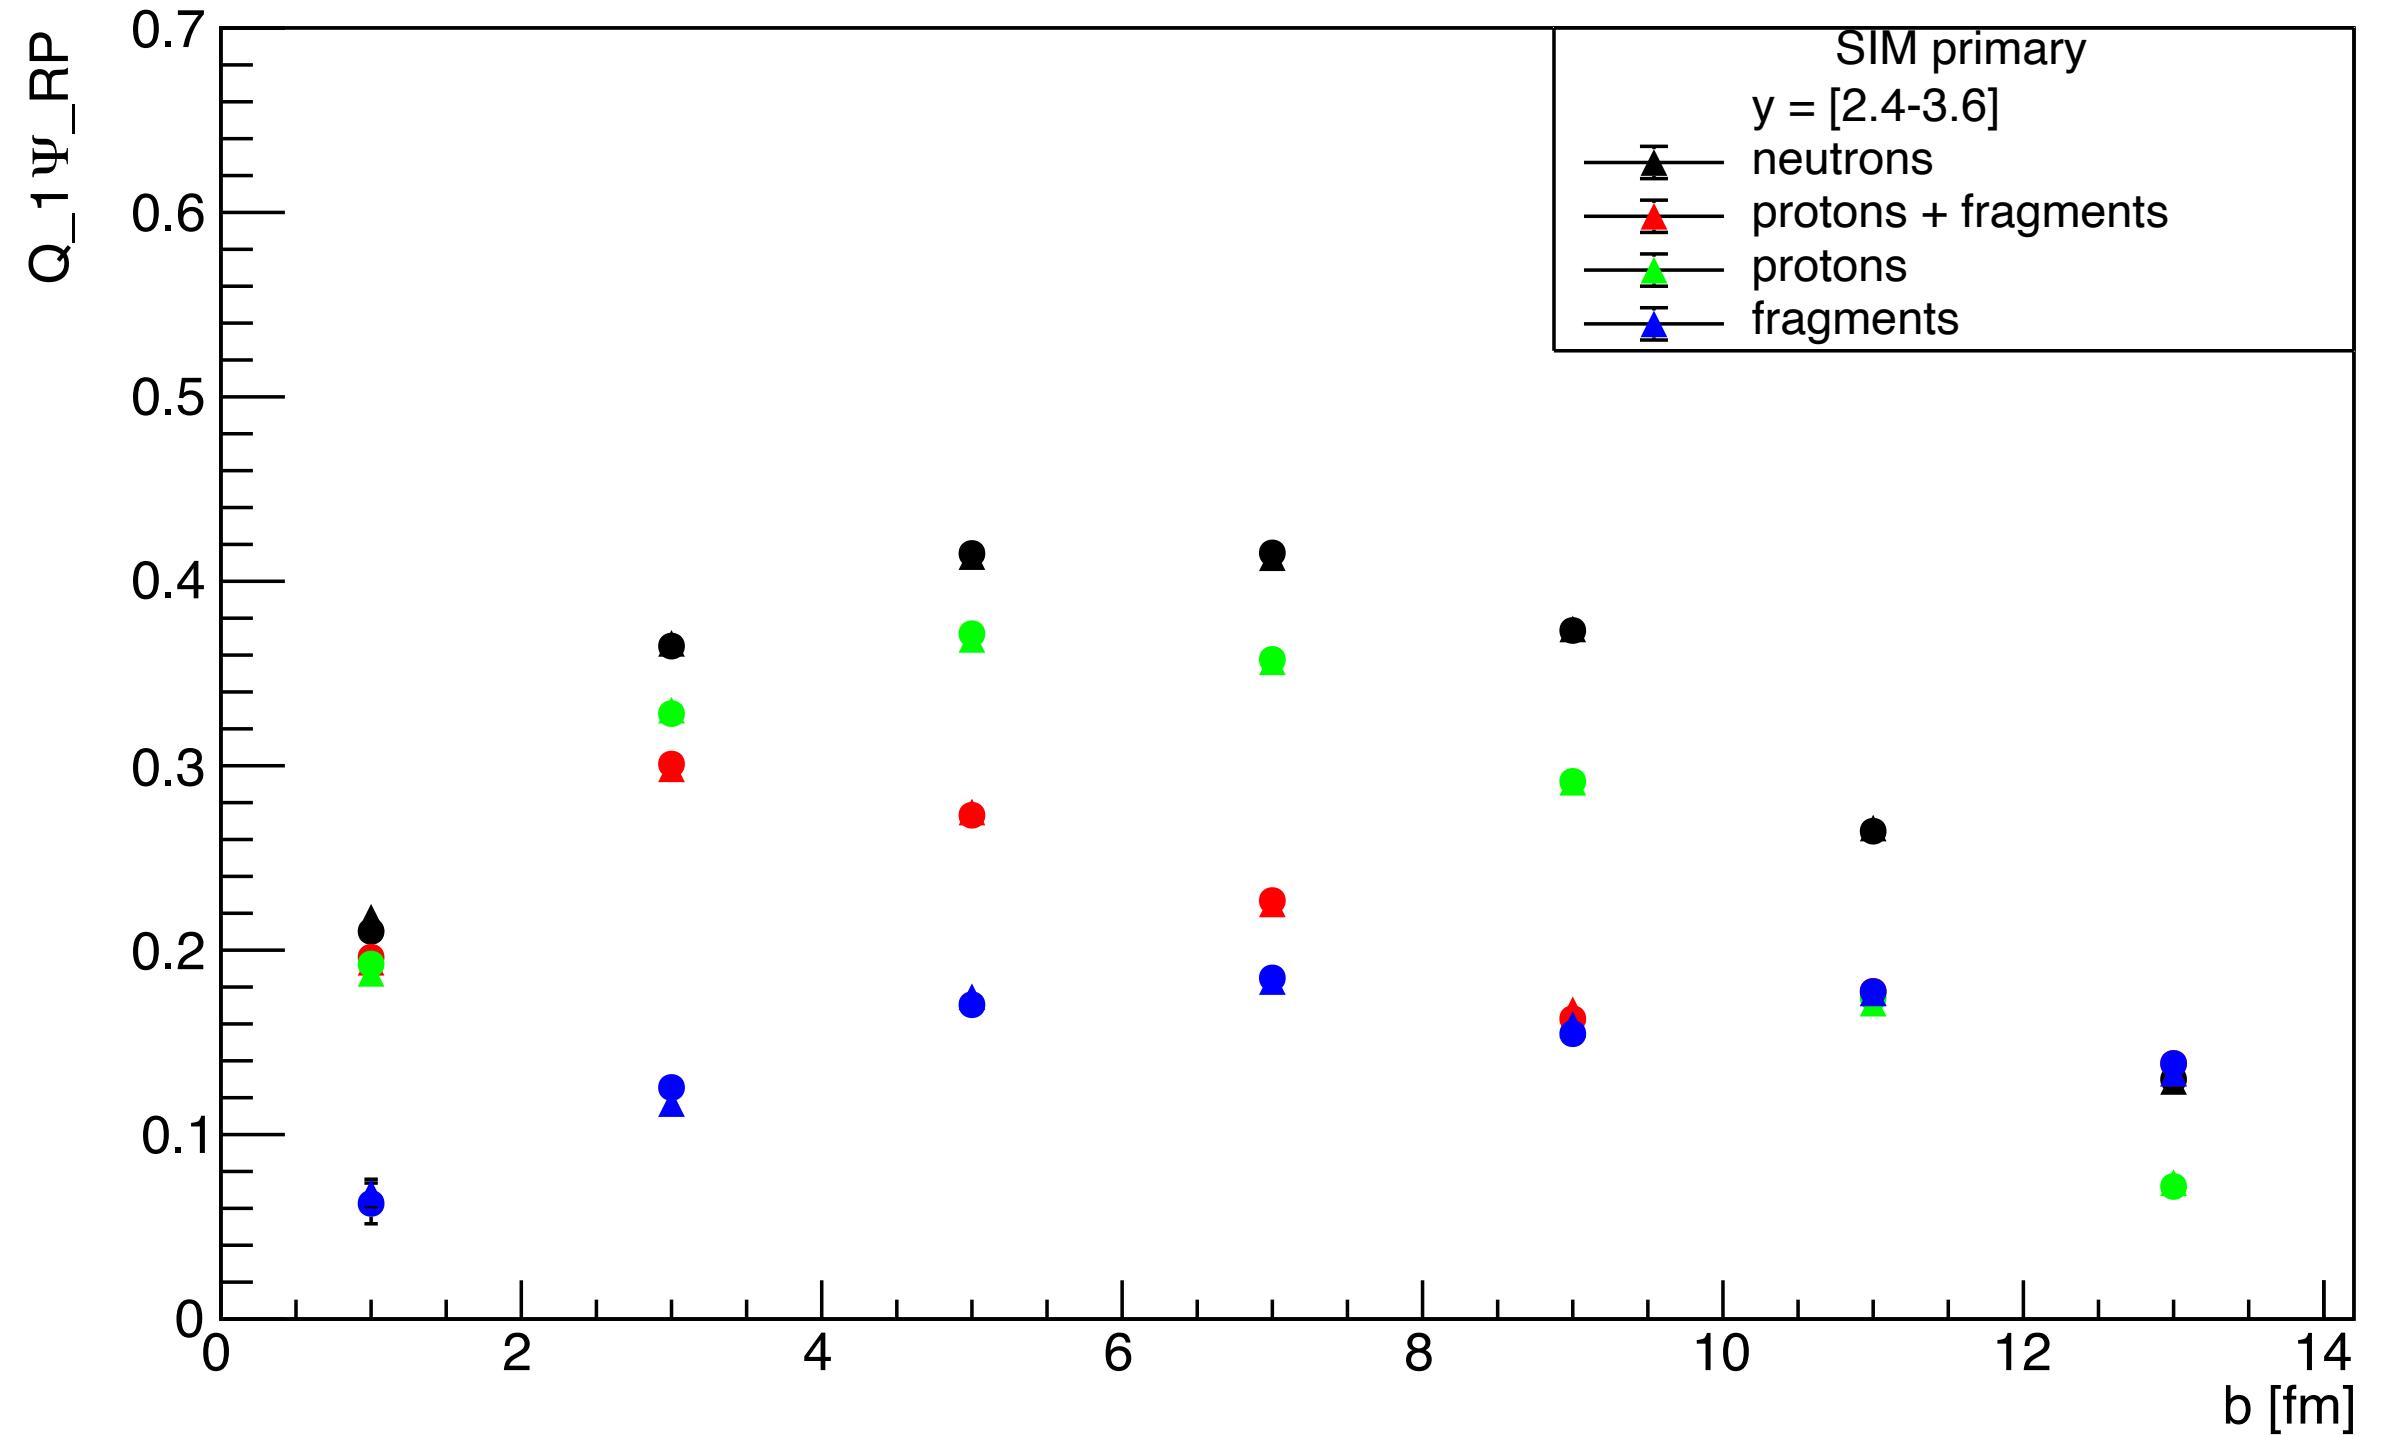

# Sim particles - dE/dx

- Mainly protons,  $p_z < 1 \text{ GeV}$

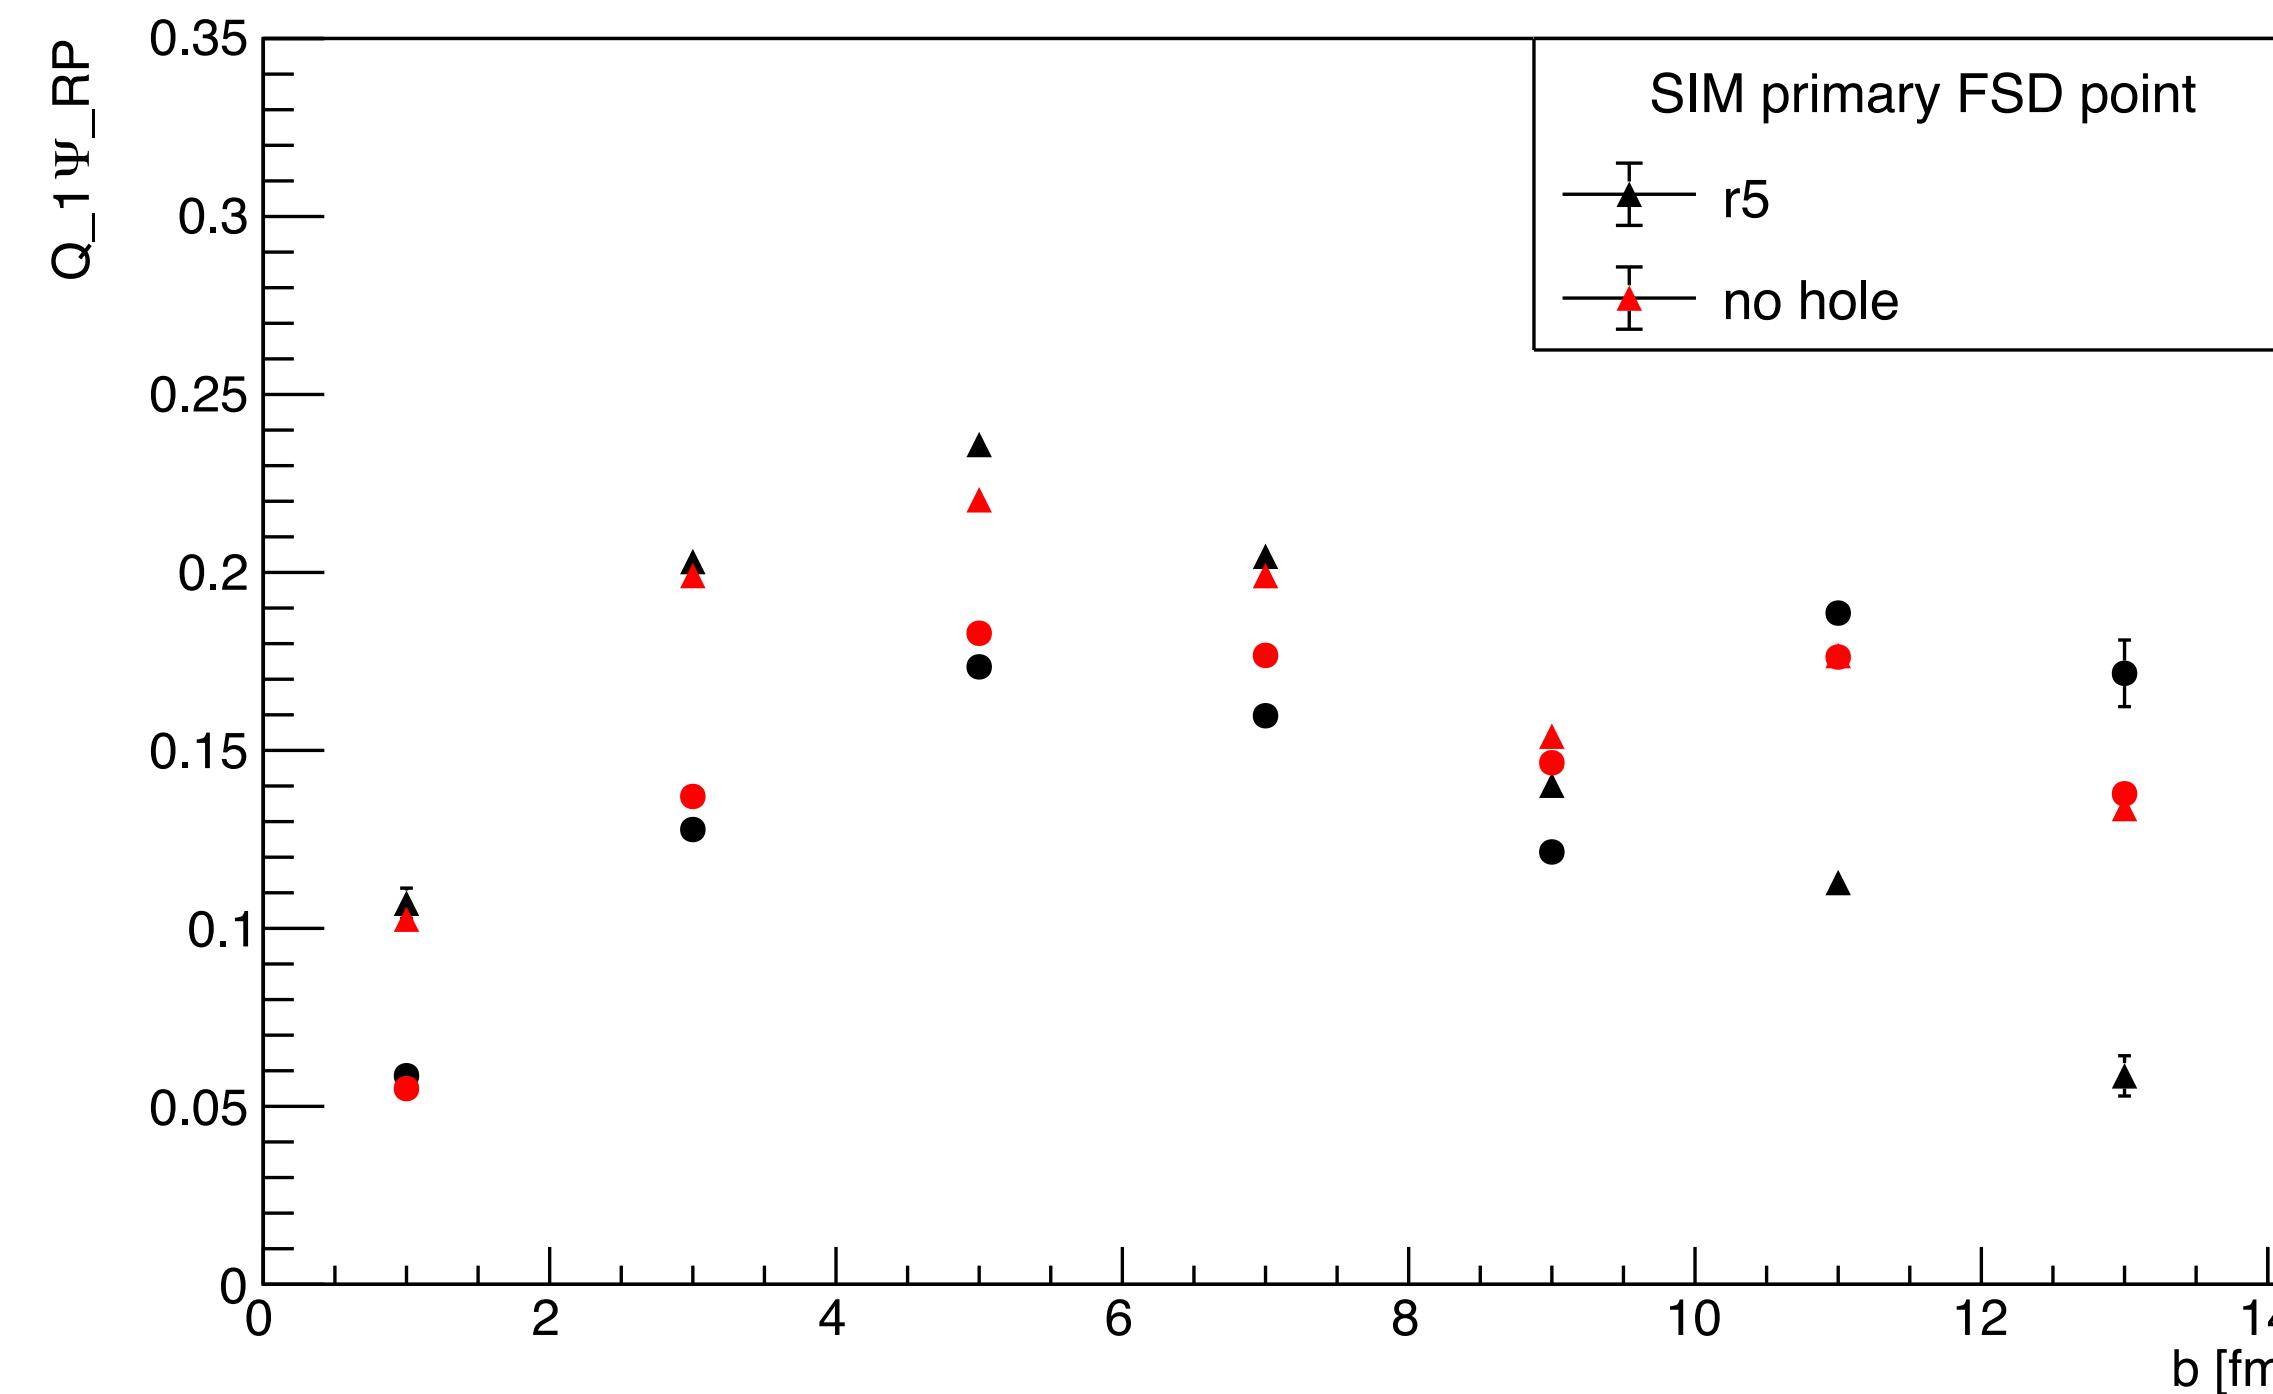

# Primary protons+fragments

- Neutrons and protons has same impact

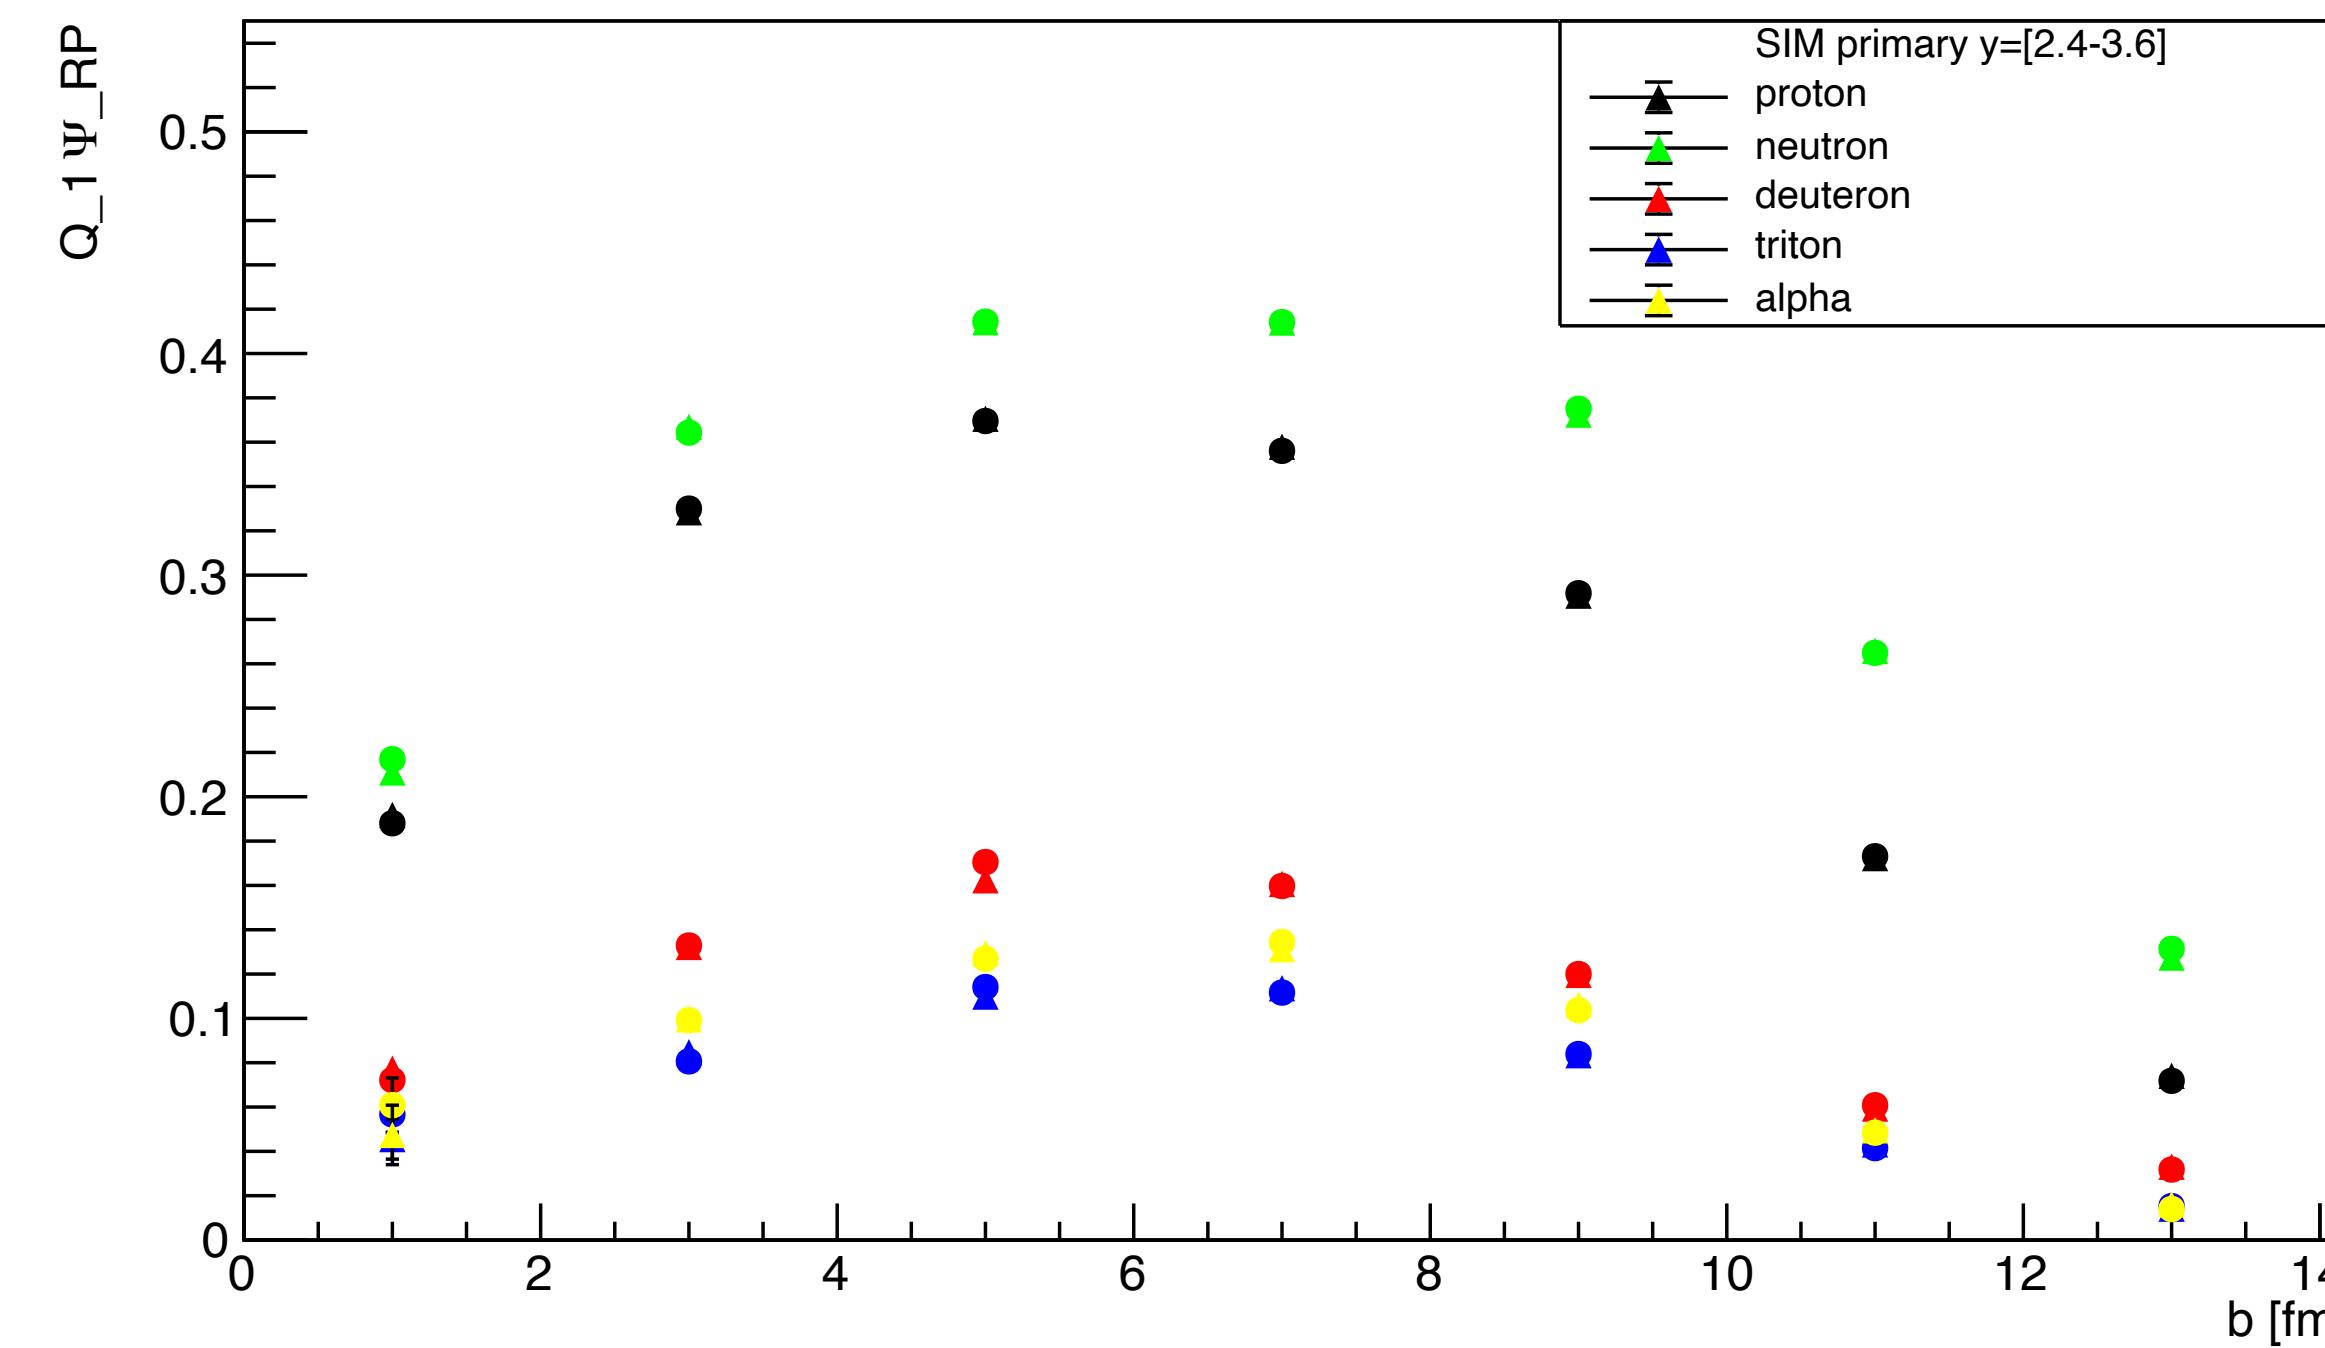

# Simulated particles with point in FSD

- Resolution is lost somewhere in the detector

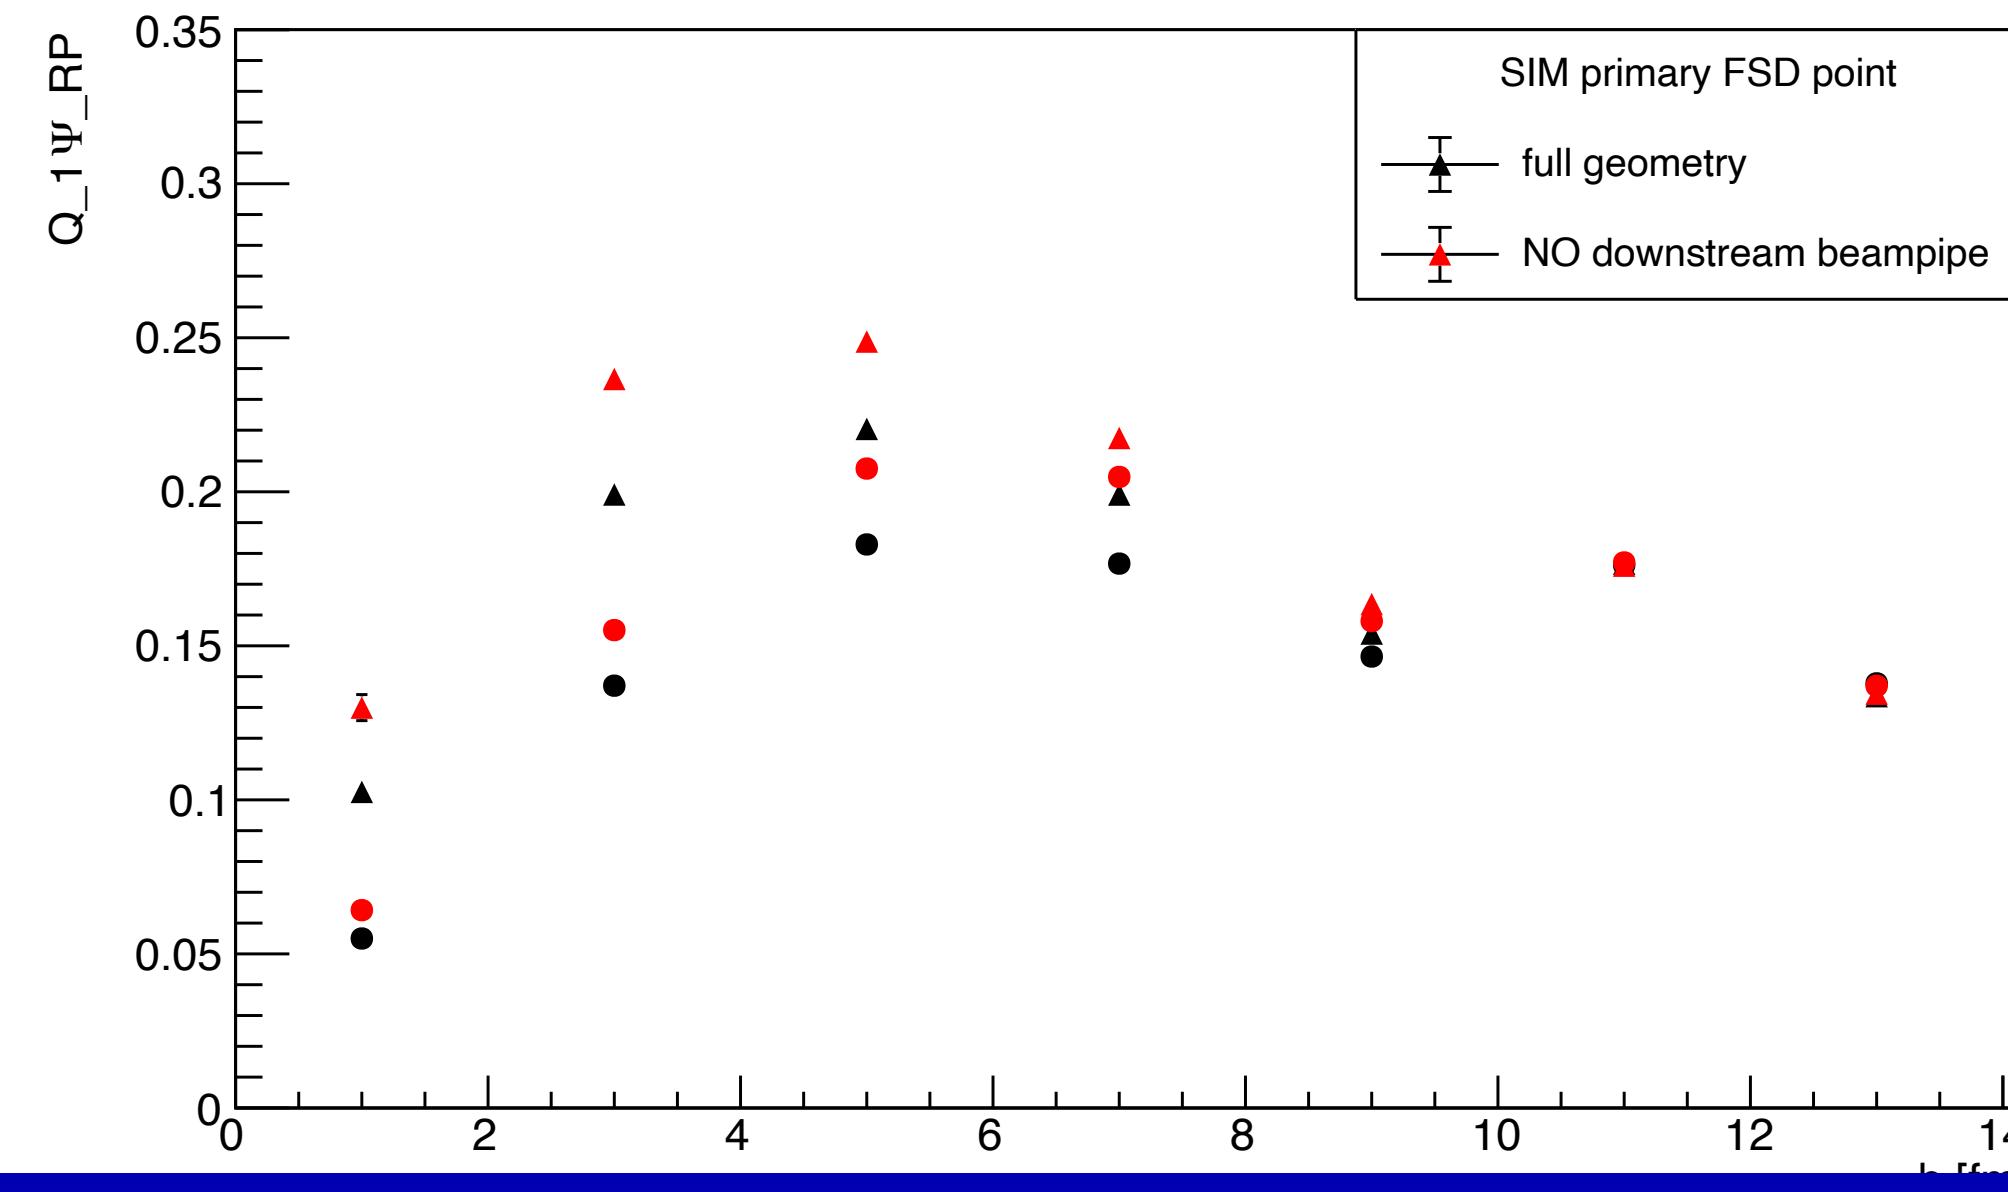

# Resolution of different particles

# Remove of downstream beampipe

- AT level was complaining about removing STS, RICH, TOF
- Only downstream pipe was removed (including bellow)
- No hole in FSD

```
