

SiPM coupled advanced scintillation detectors

Matthias Kube

HISKP
Universität Bonn

Overview

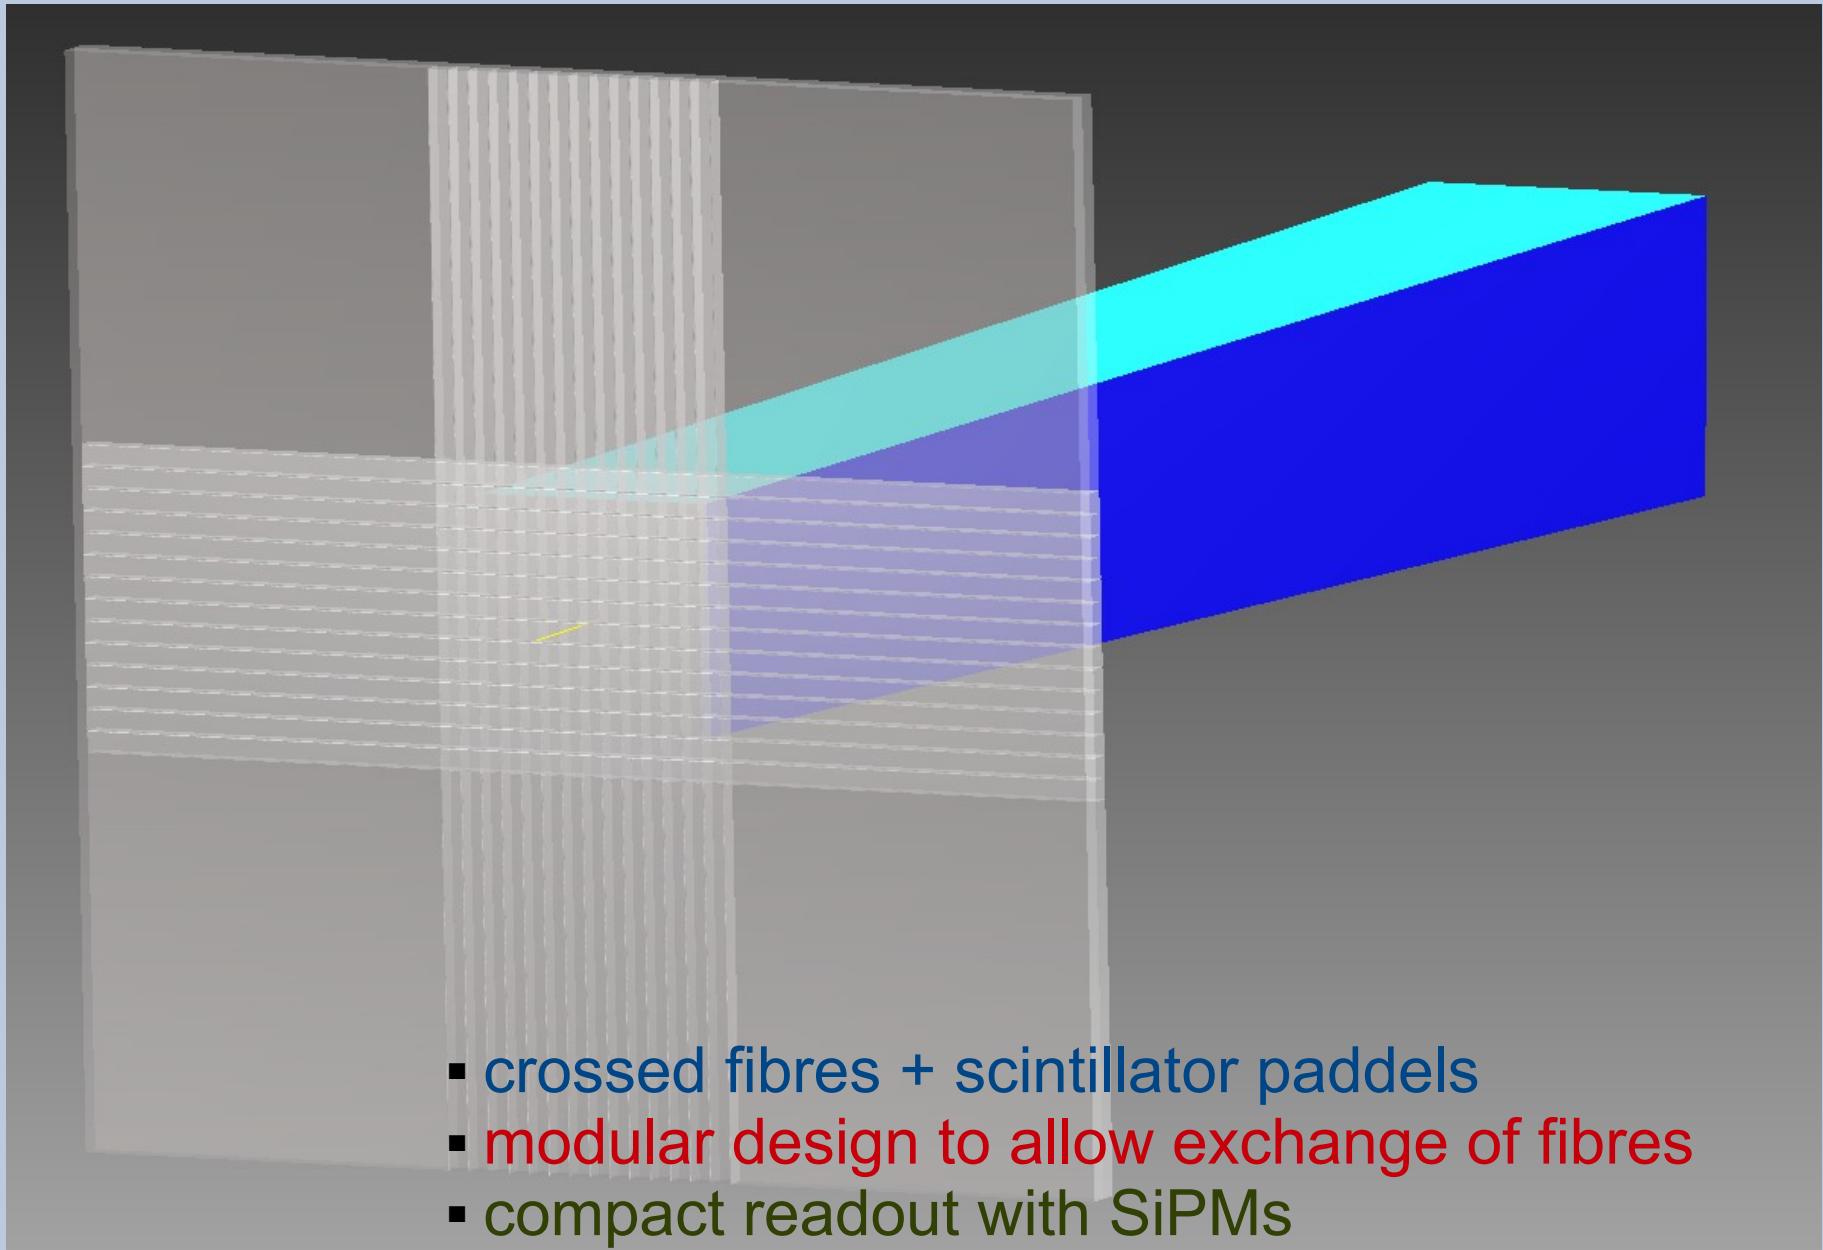

„Proof of Concept“ detector: Beam Monitor
Crossed Fibre Layers

First Configuration : Square Organic Fibres
electron beam dimensions / electron veto in photon beam

Second Configuration : Round Inorganic Fibres
photon beam dimensions

Segmented trigger detector for cosmic particles:
dimensions of front surface of one PANDA crystal

Scintillating fibre detector

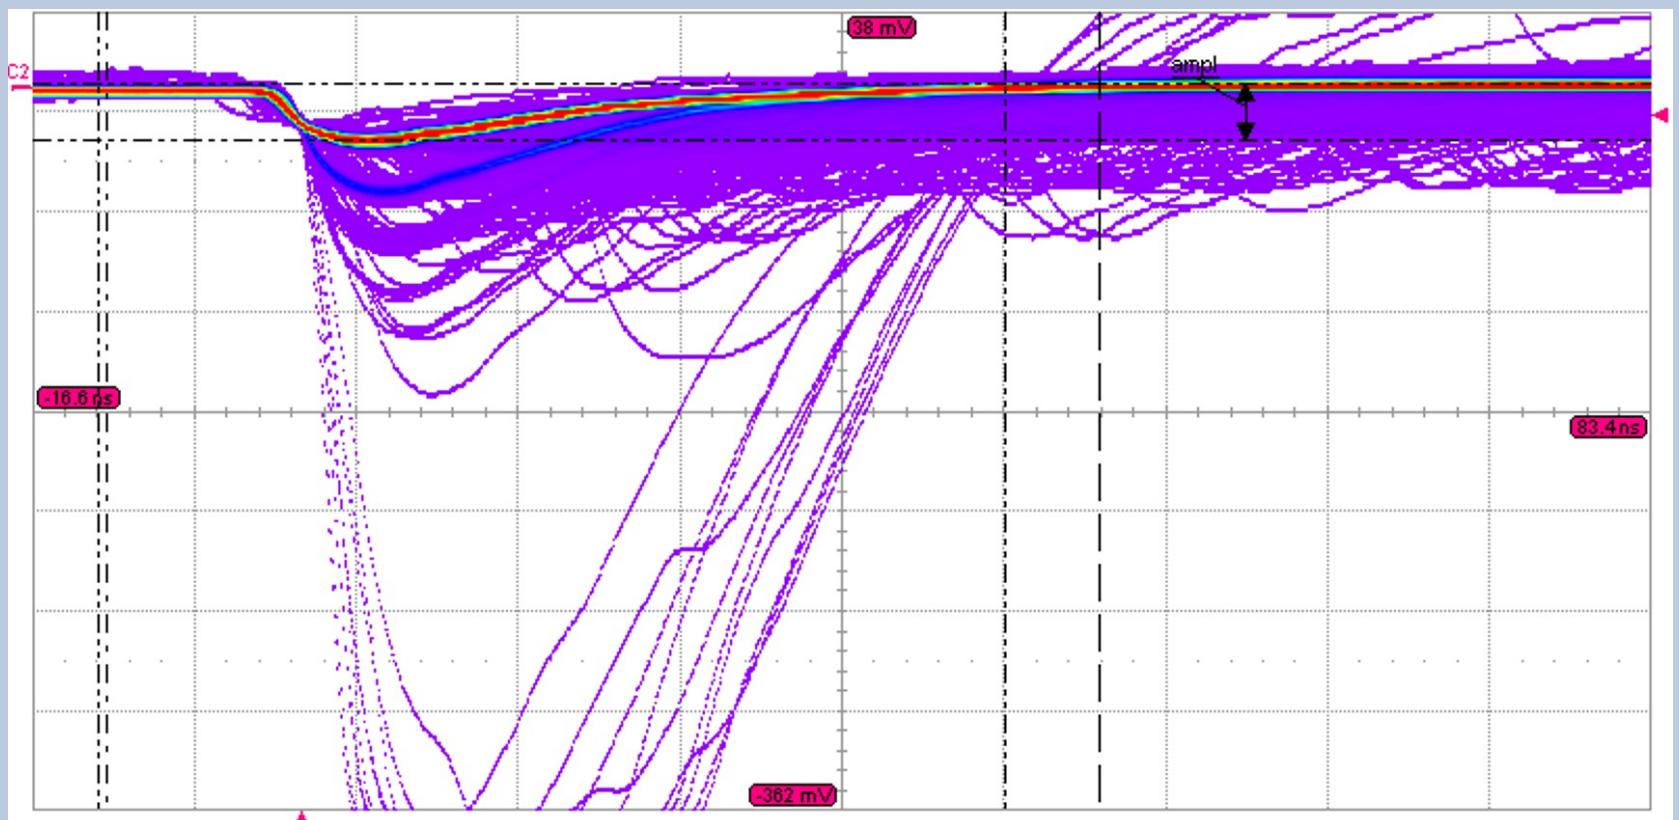

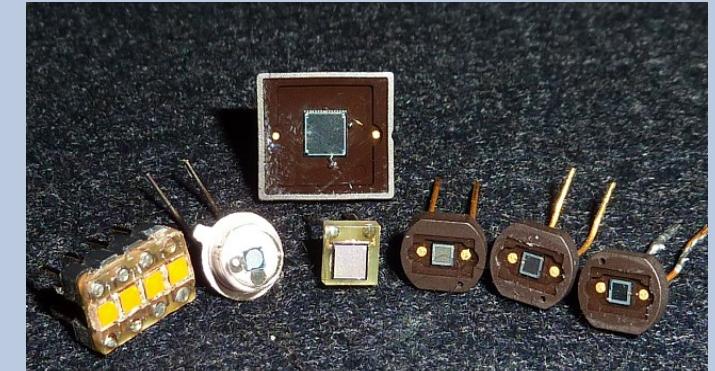

Scintillating fibre detector

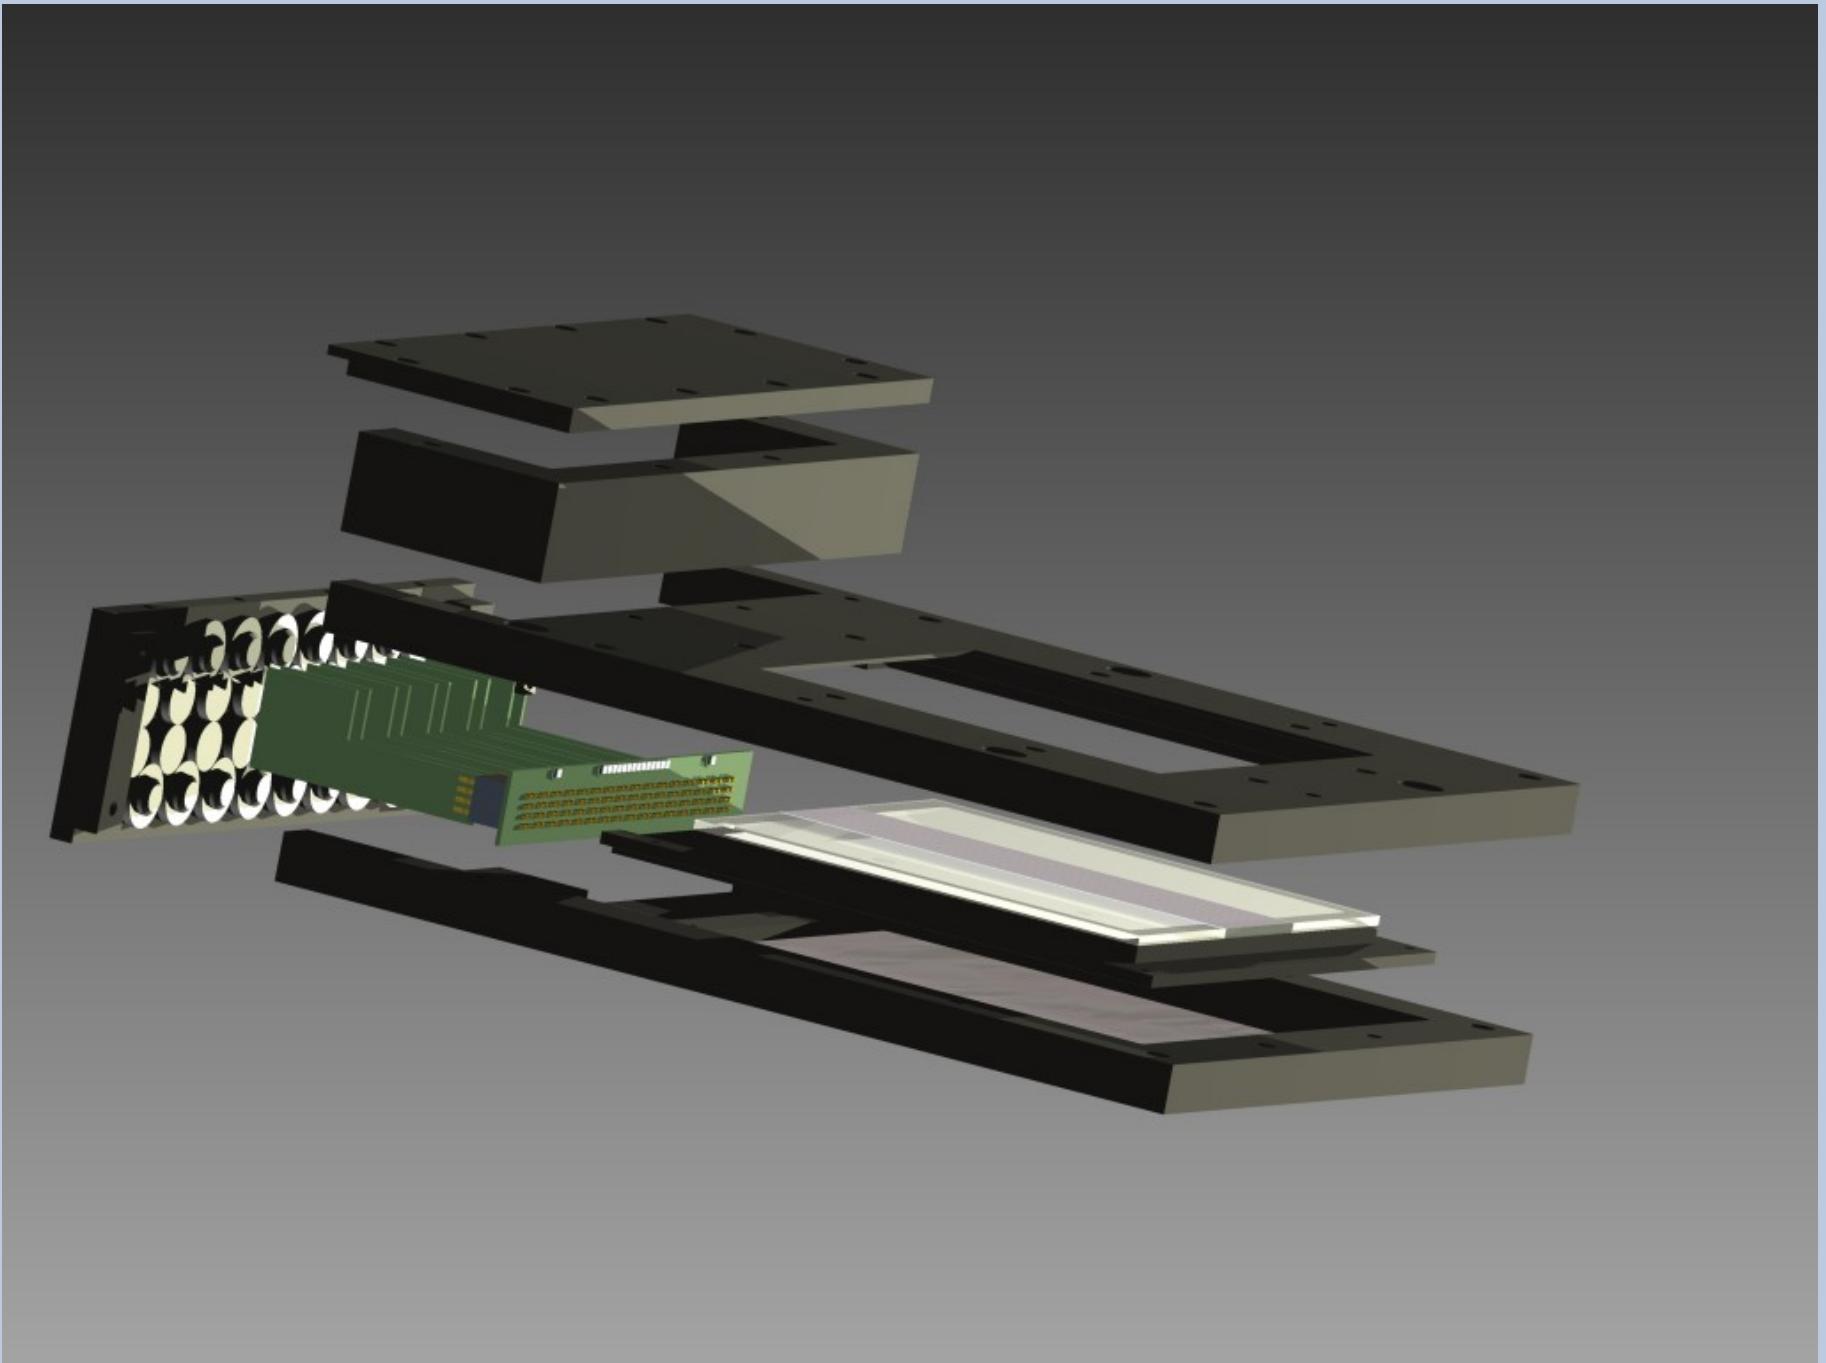

Hamamatsu MPPC C50 (400 Pixel) @ Bicron BCF10

performance at lab temperature:

- Signal > 10 Pixel (~22 / MIP)
- Noise <10 Hz at 6,5 Pixel
- Gain <10% up to 1 MHz

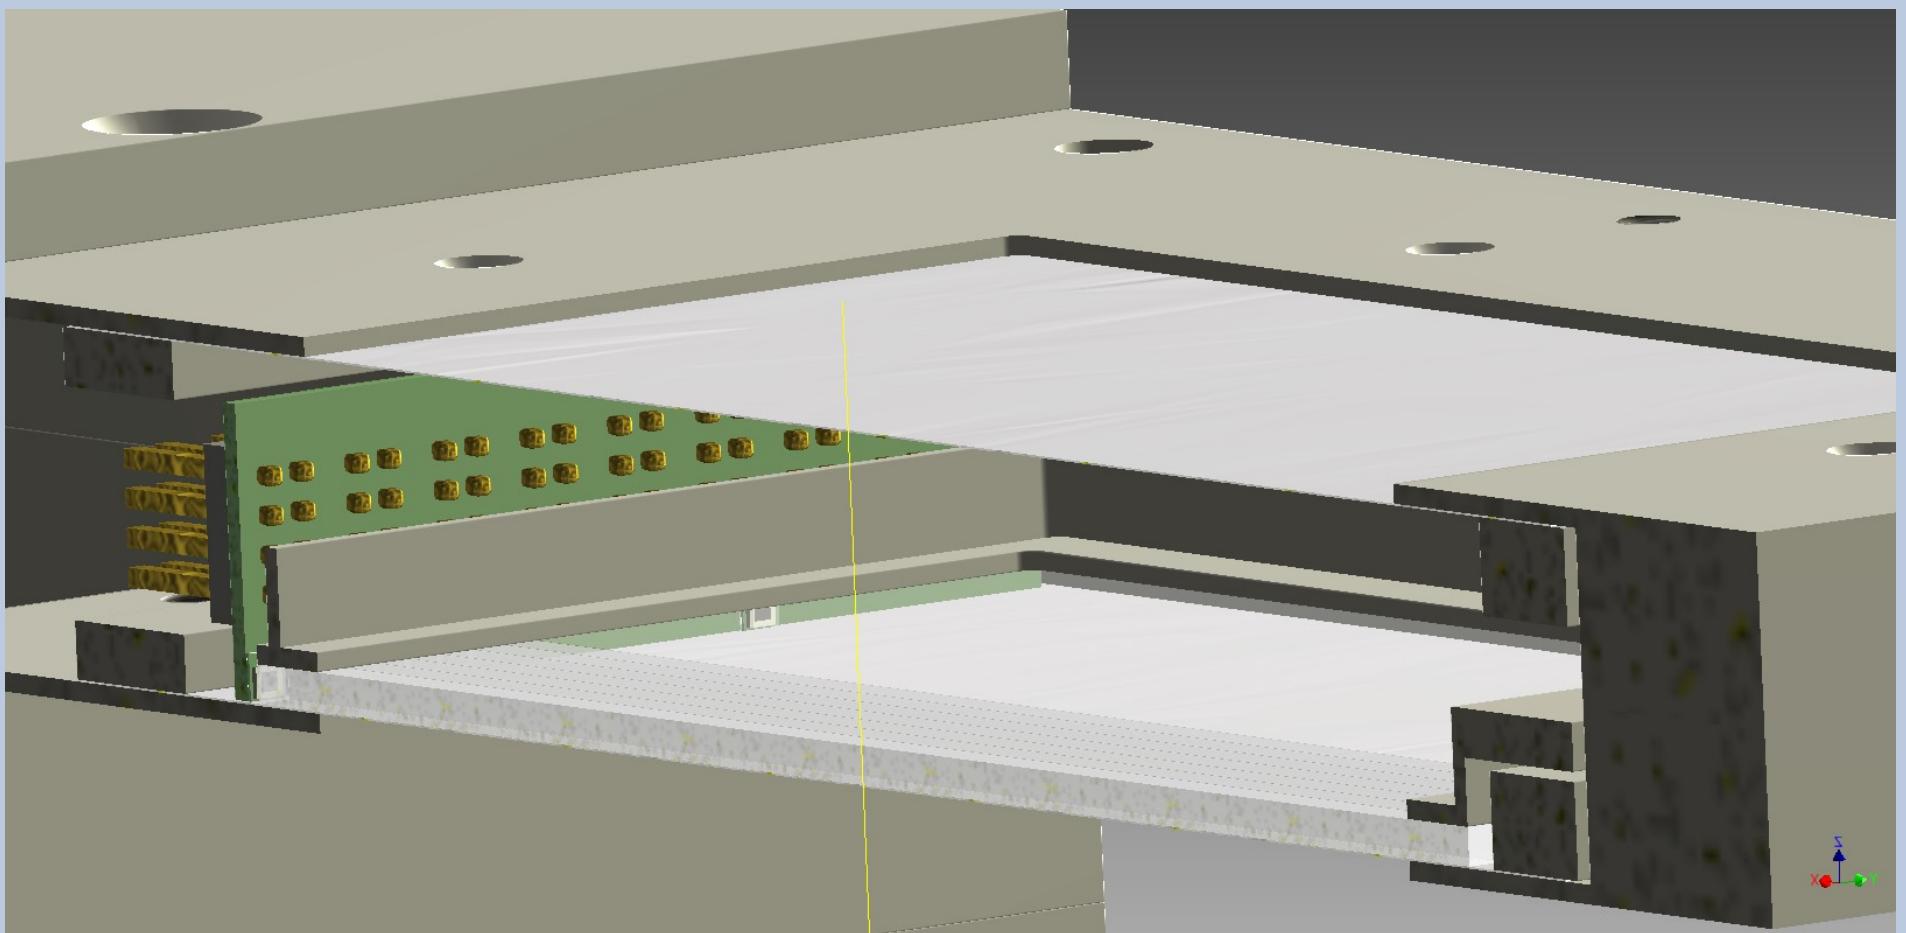

Detector Design

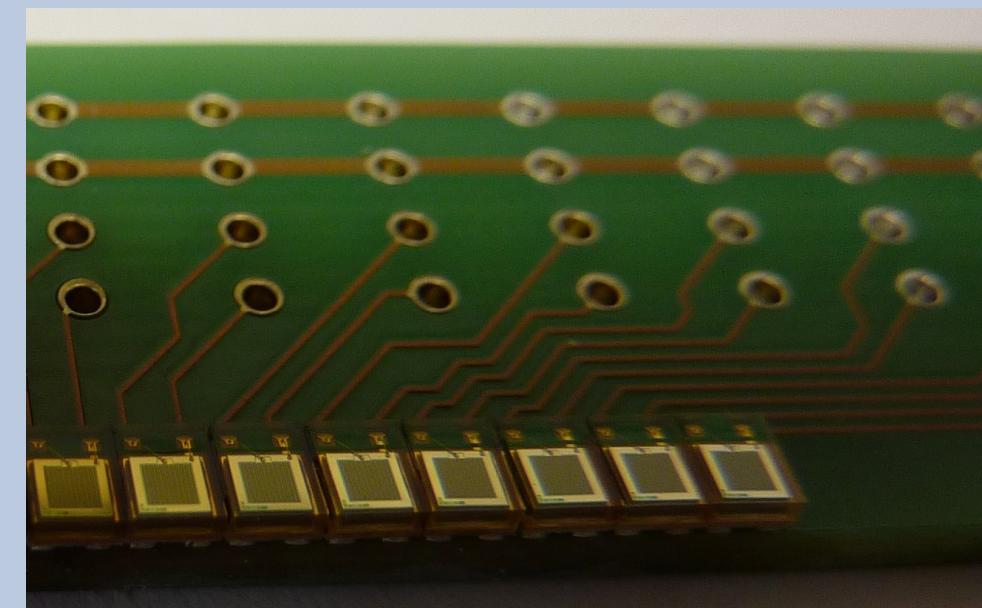

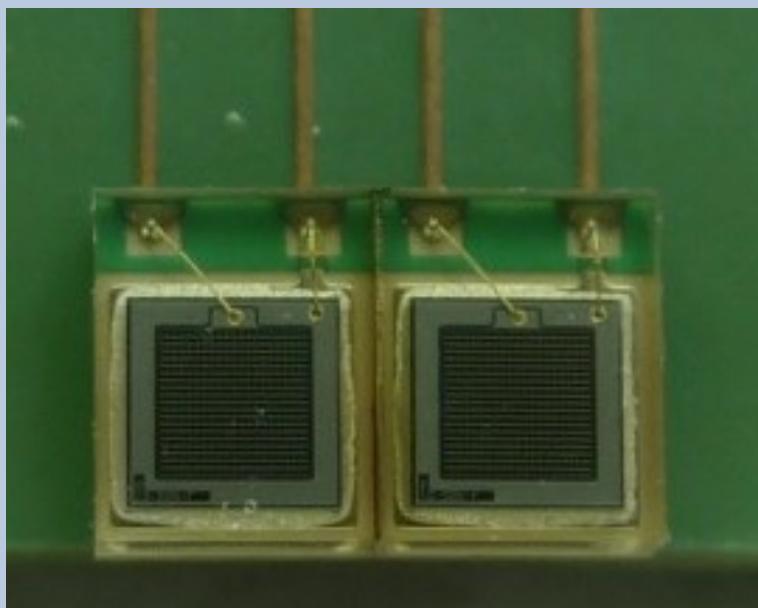

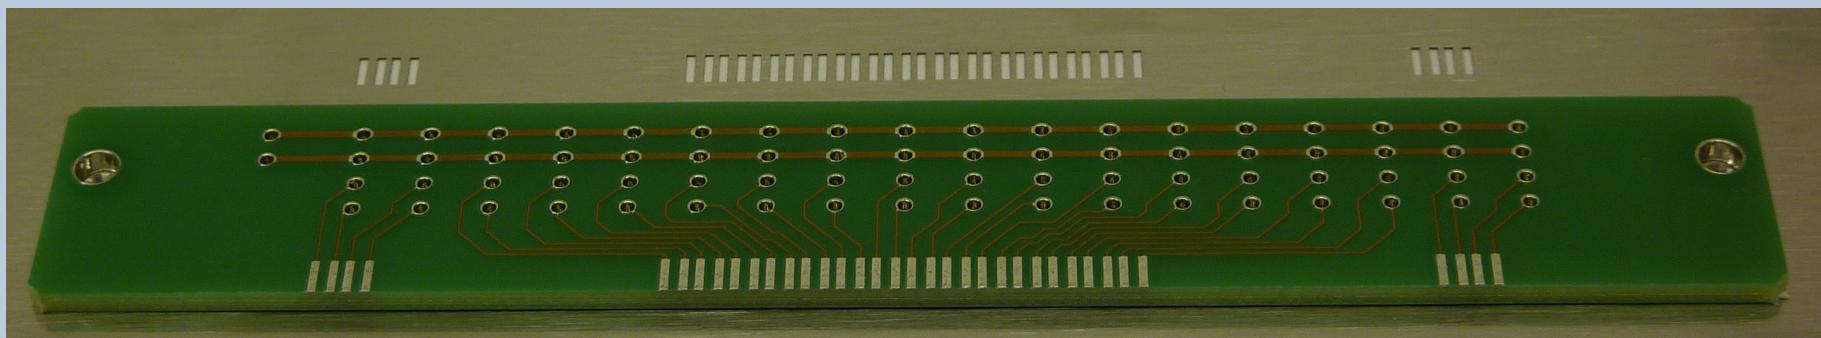

Detector Design

- compact & robust
- light- and EM-shielded
- 2 mm distance between two modules

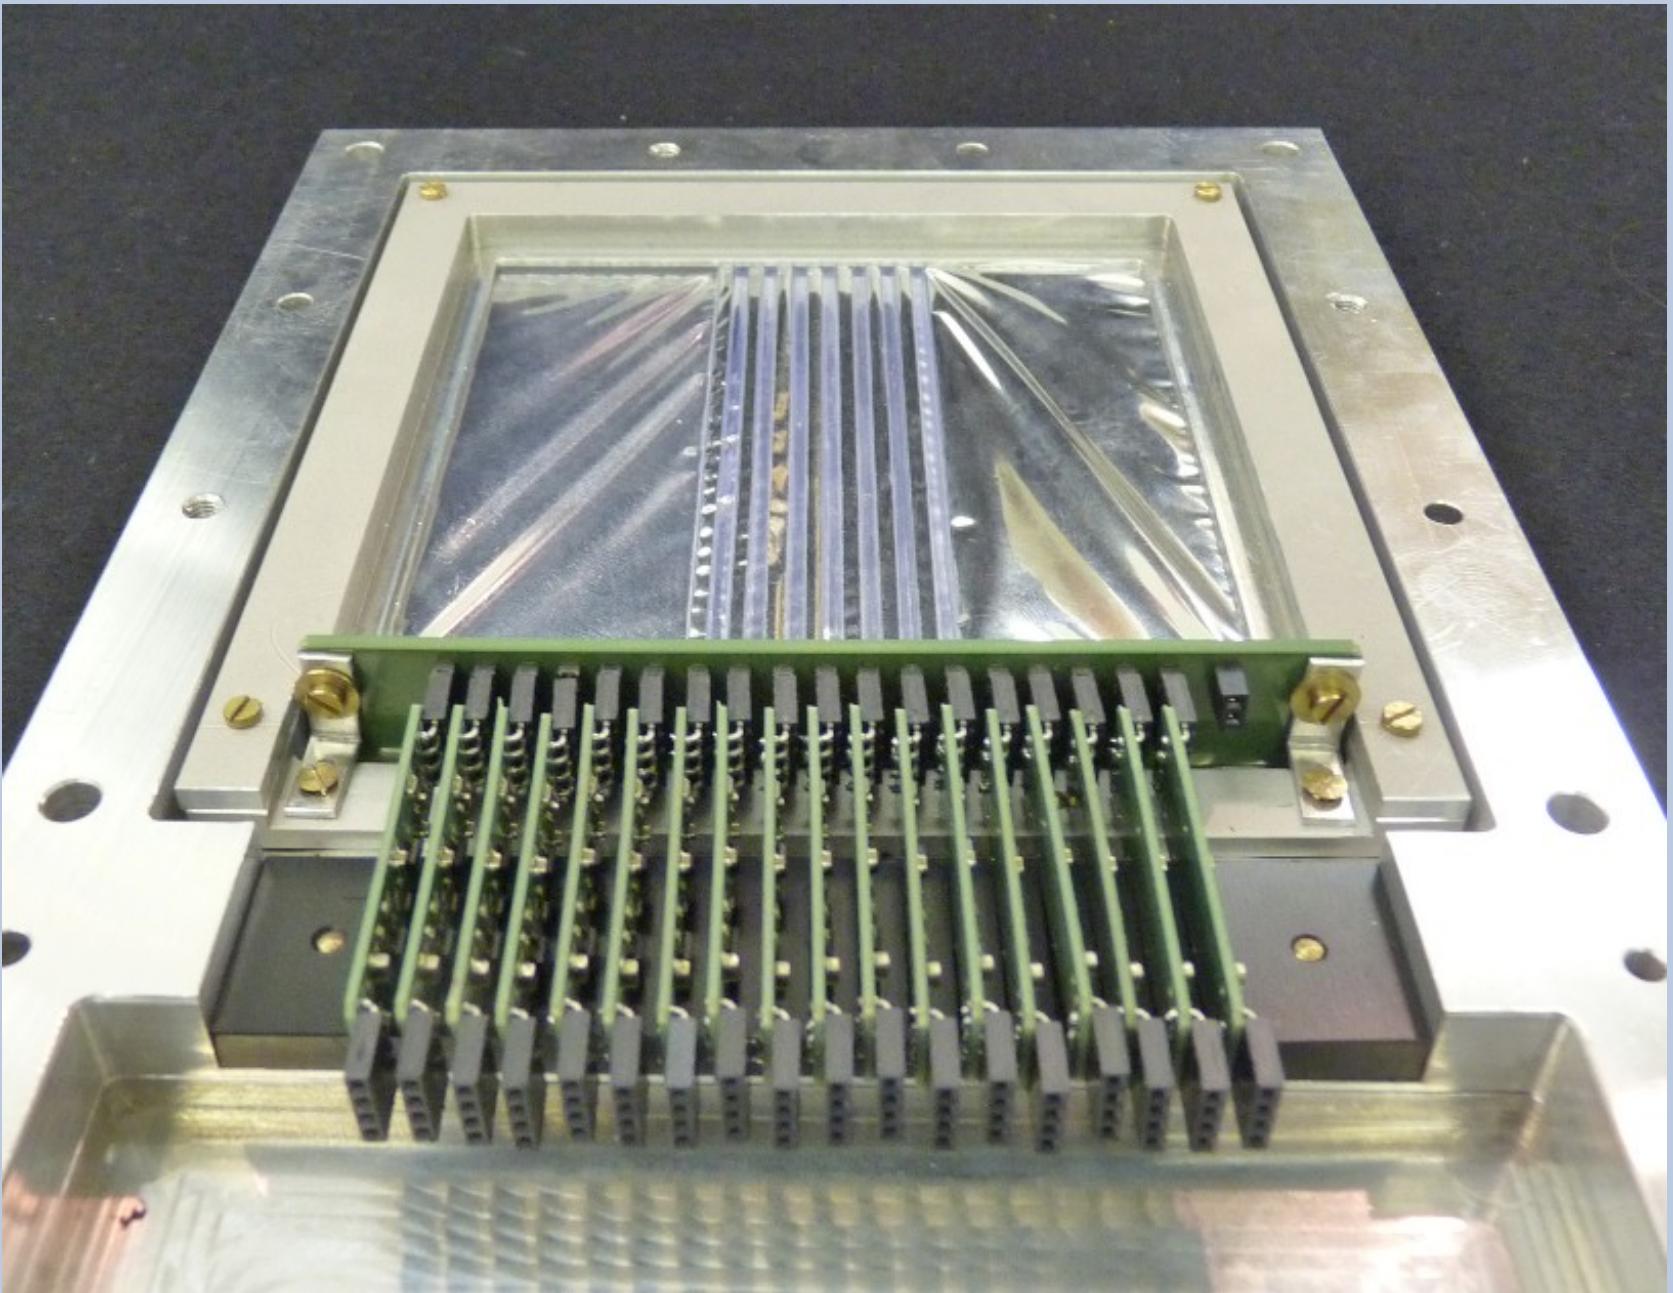

SiPM Board

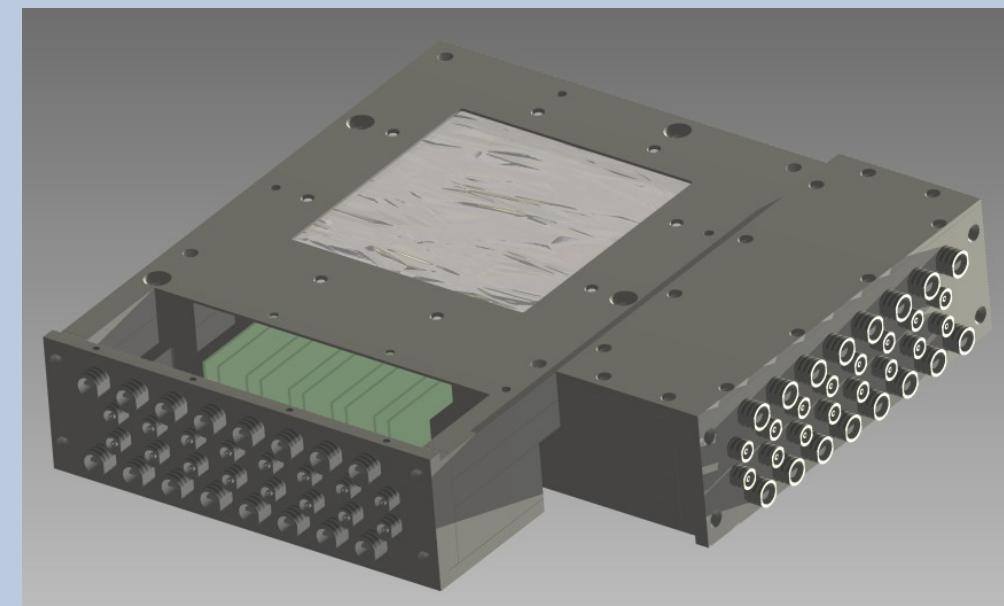

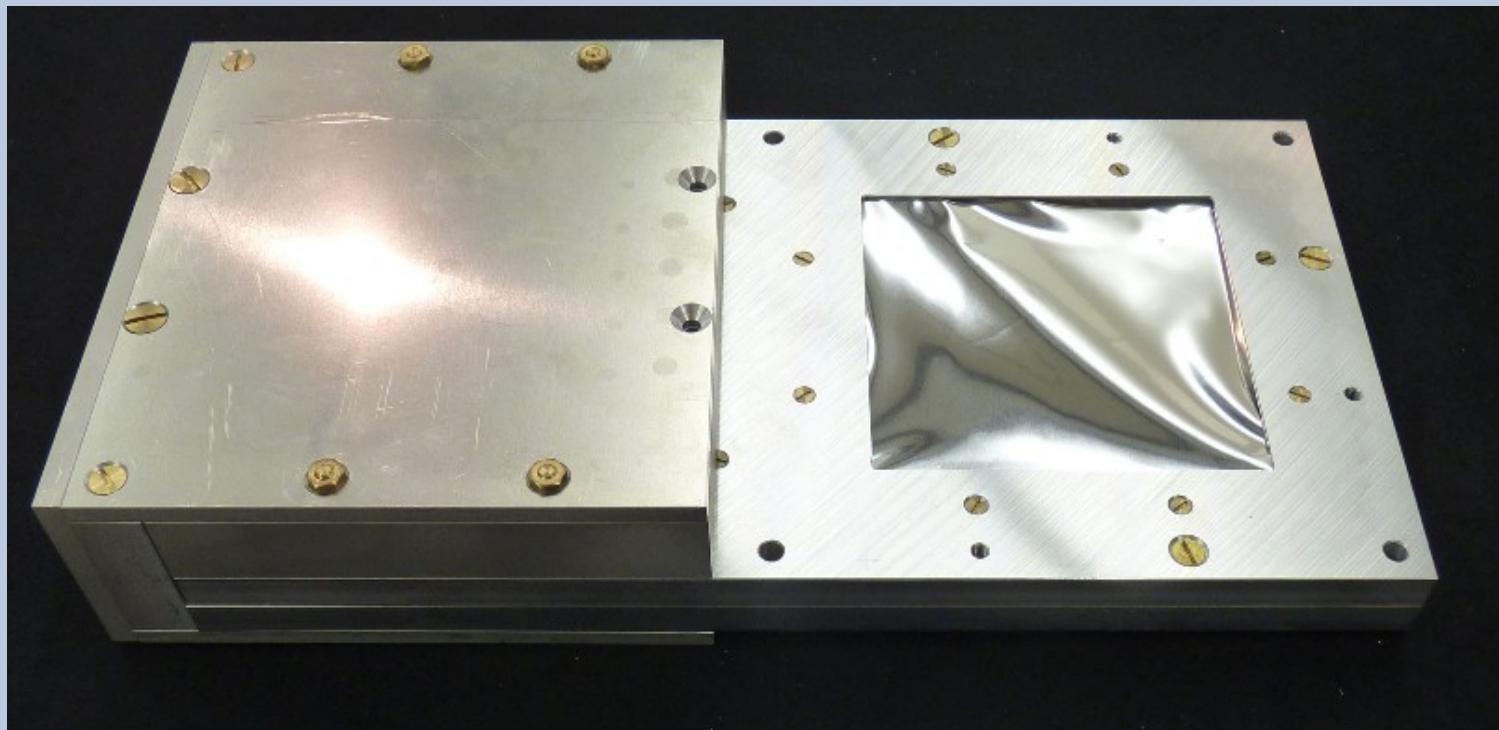

- common ground connection close to all sensors
- distribution of PreAMP LV
- reflow soldered SiPMs with 2 mm pitch

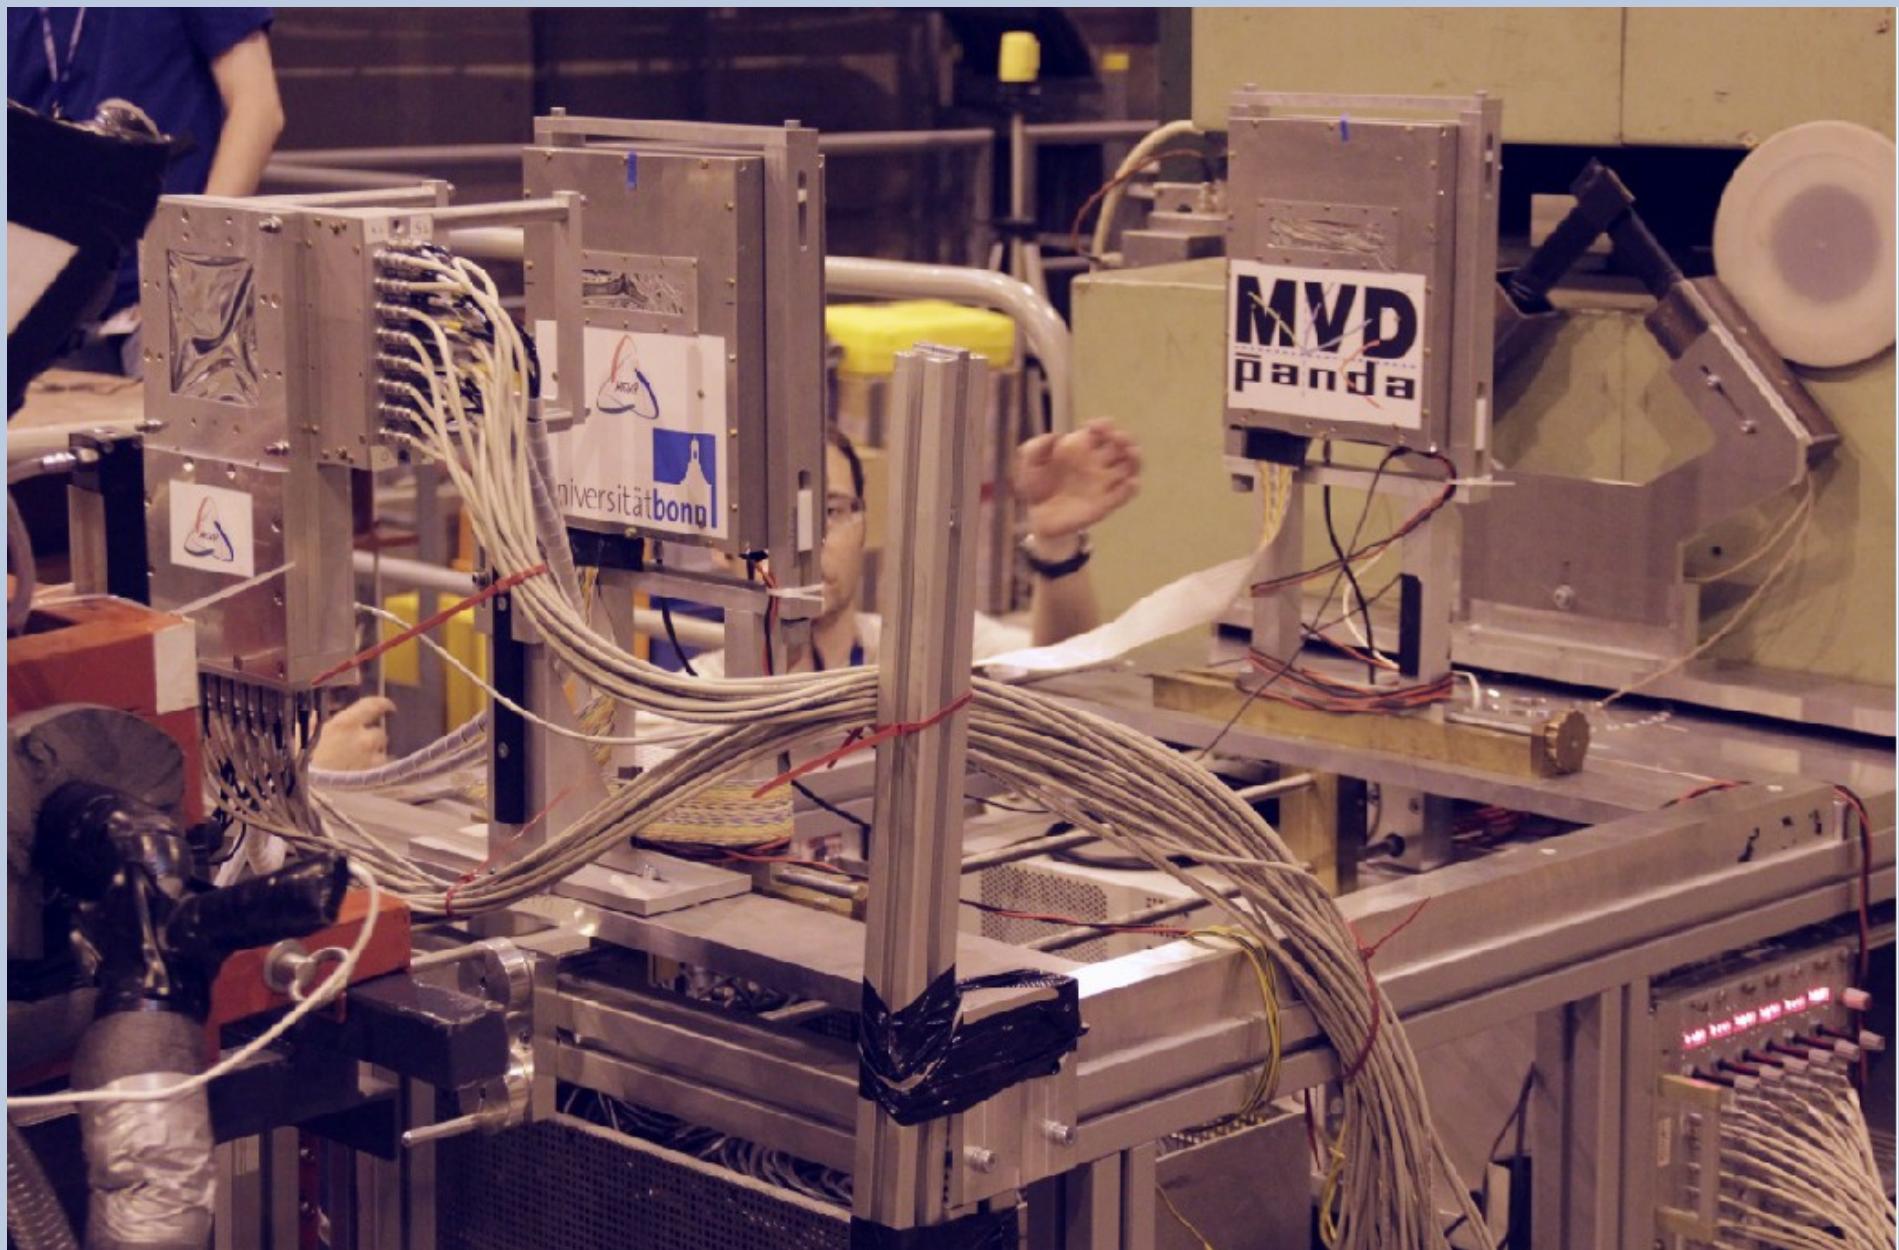

Sensors / PreAMPs

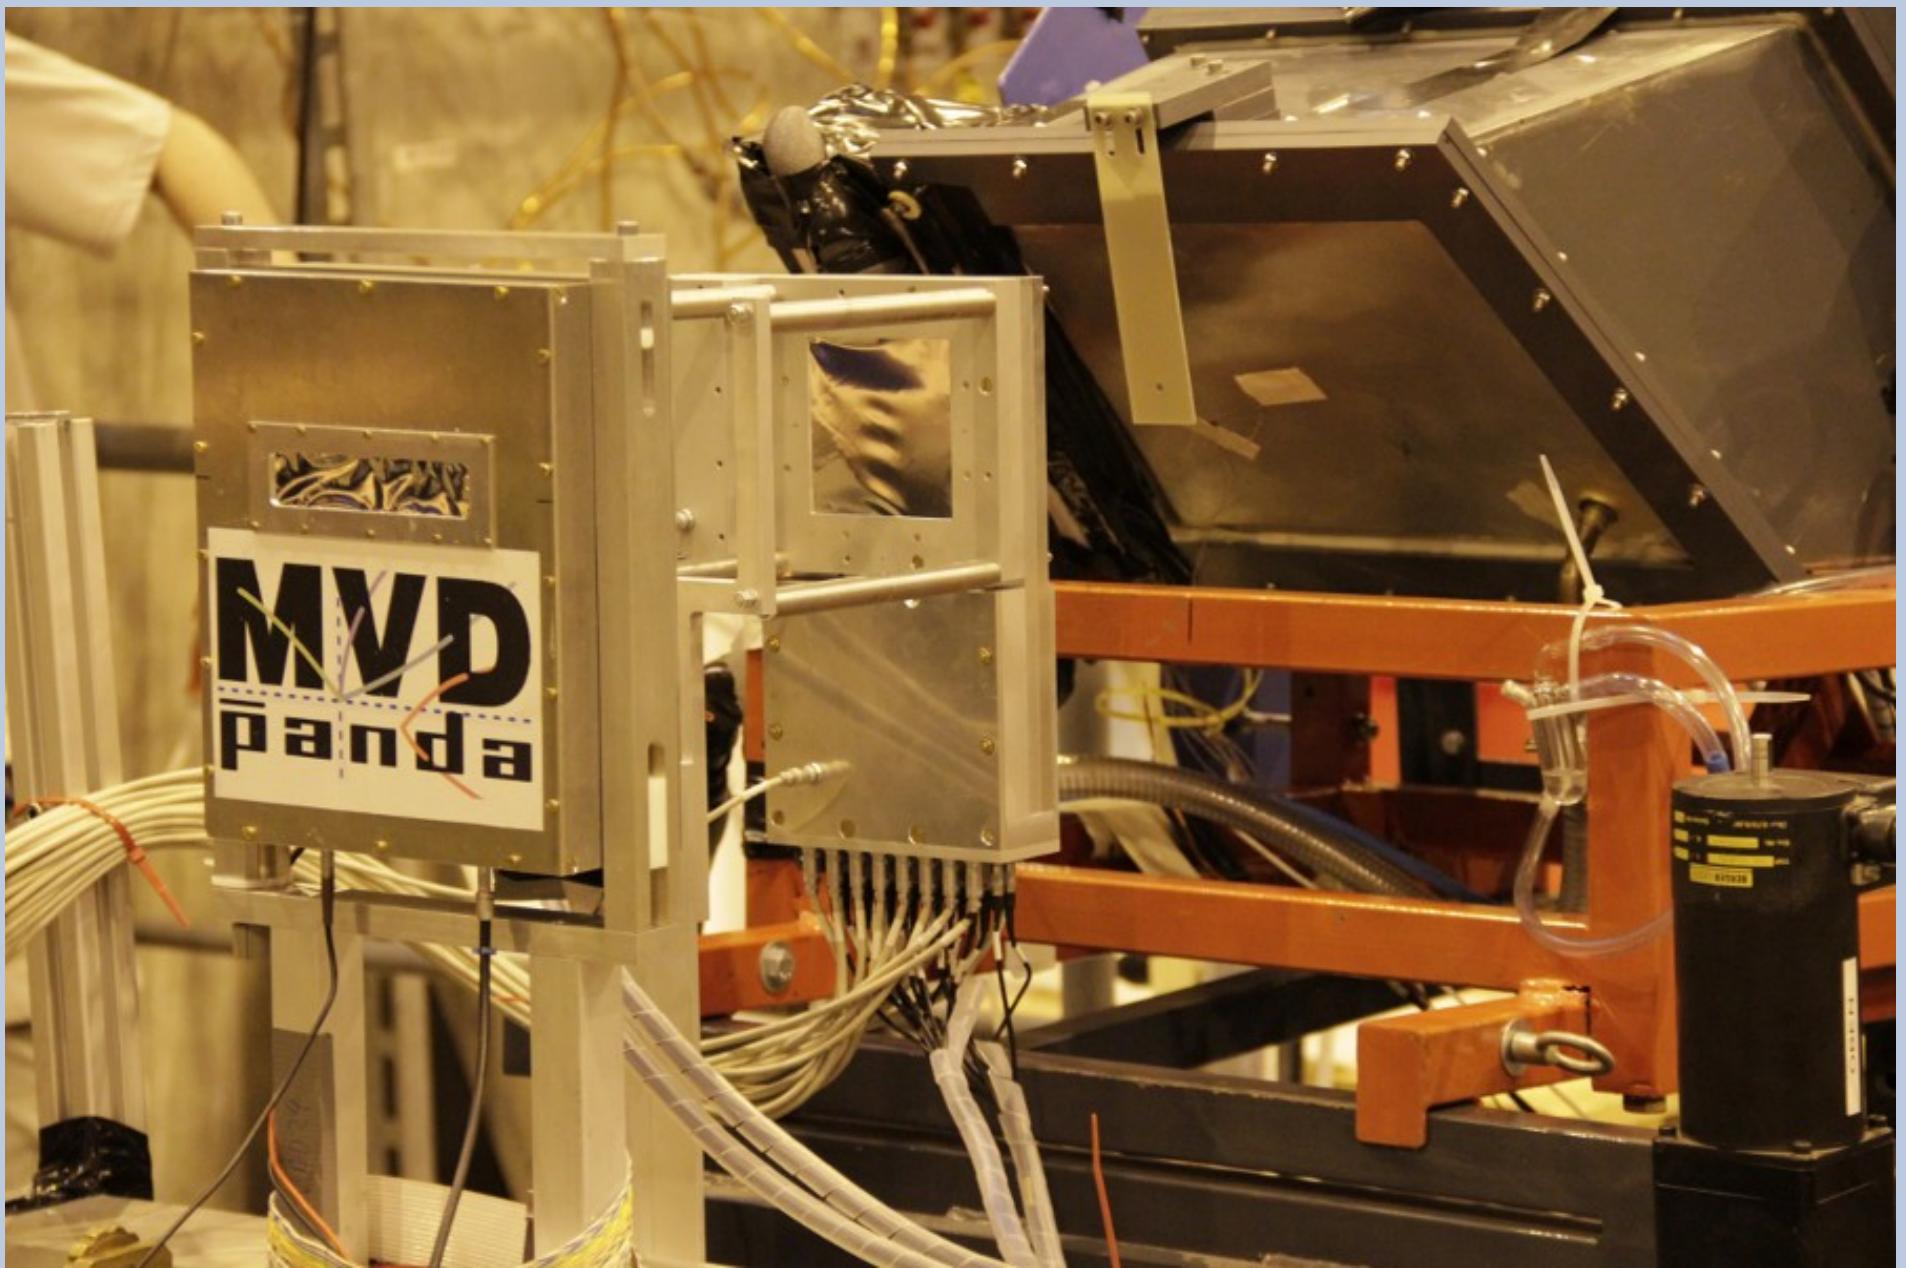

First Detector Module

Performance at CERN 2011/2012

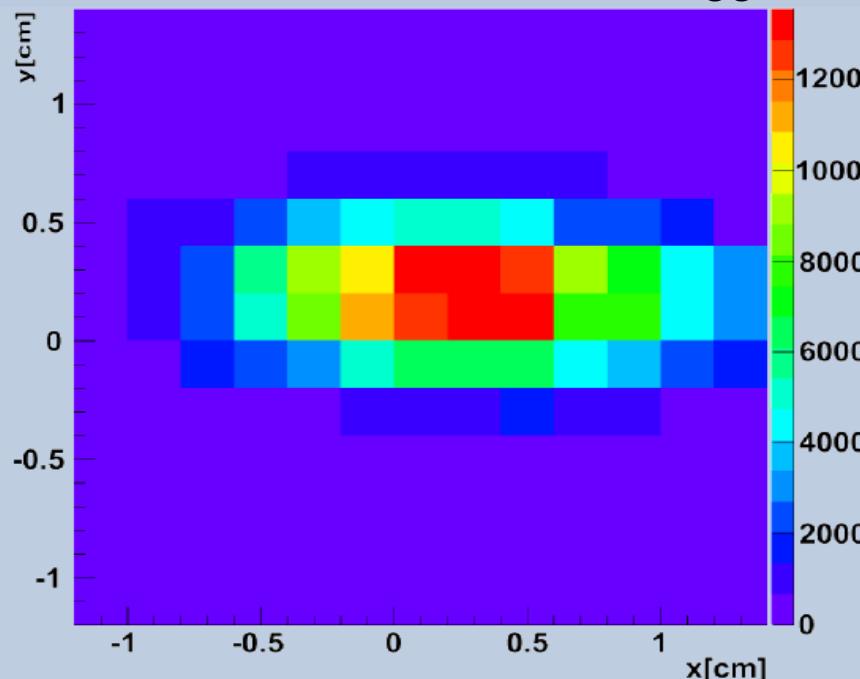

Performance at CERN

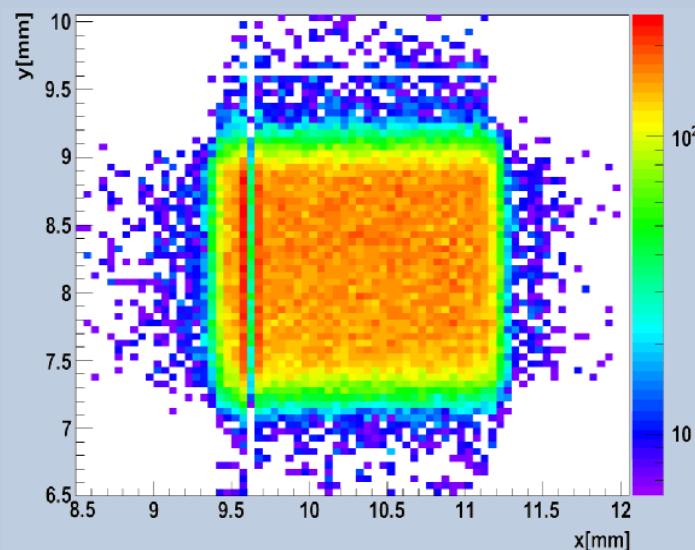

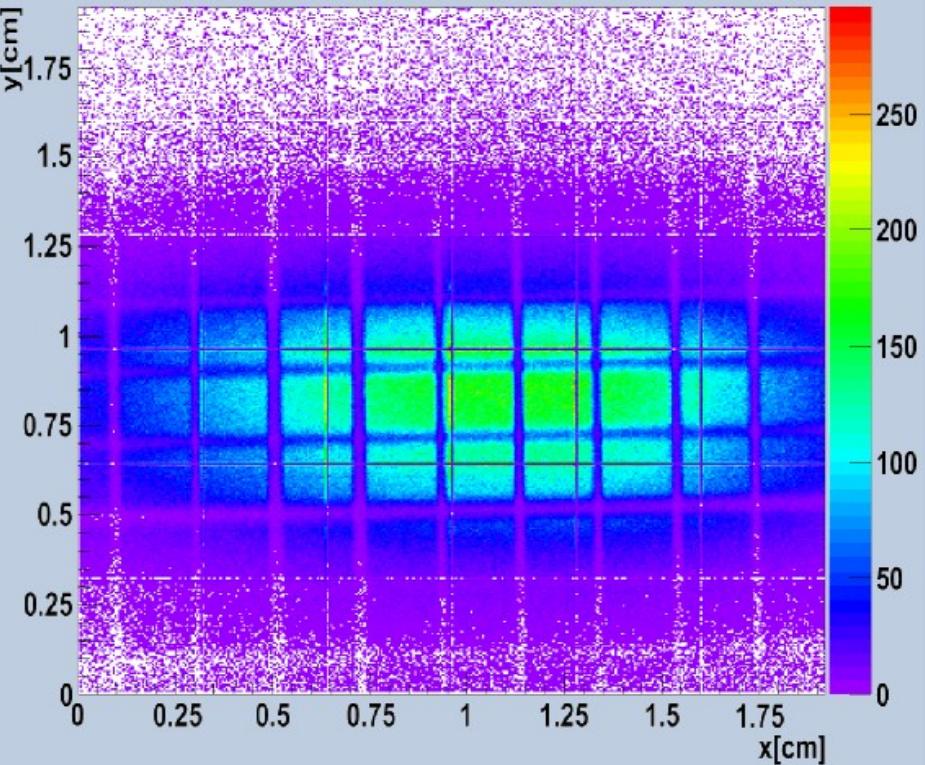

Performance at CERN 2011/2012

15GeV electron-beam, fibre trigger

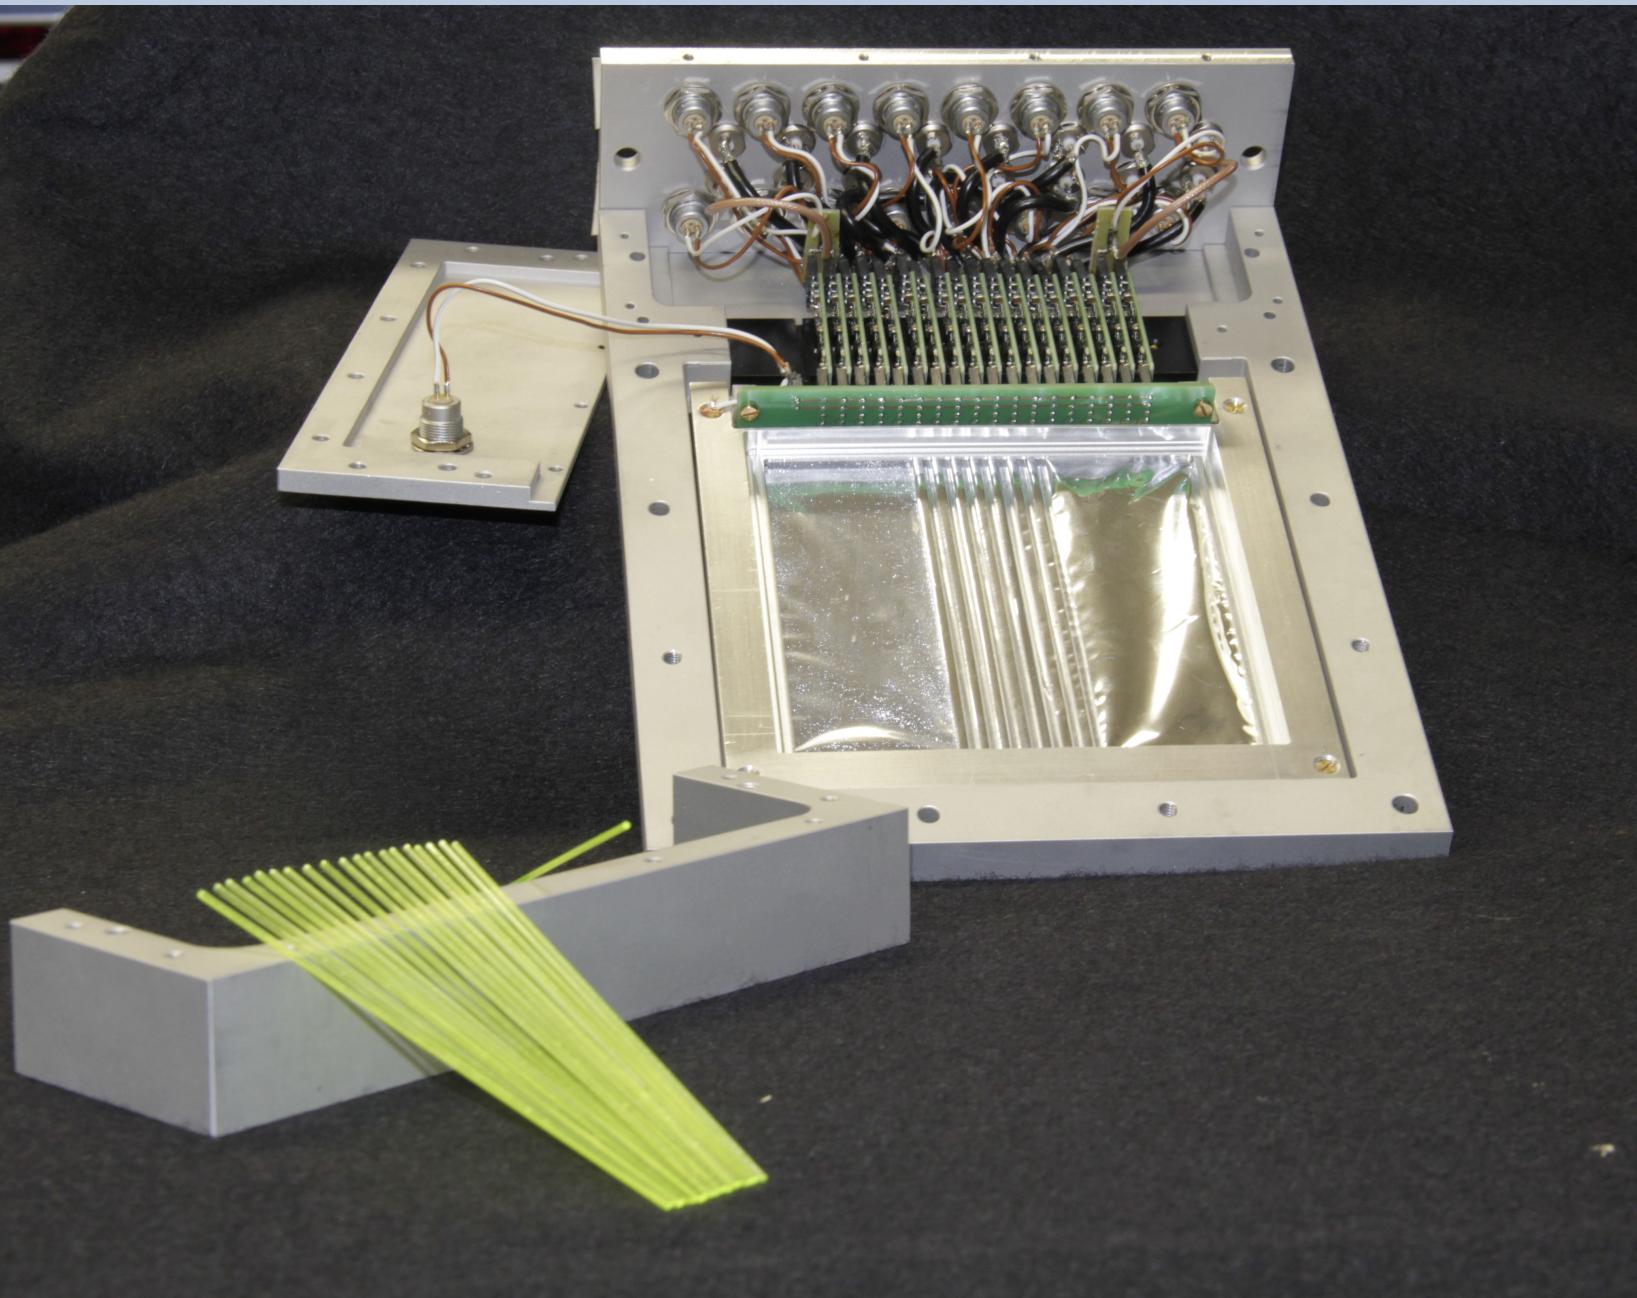

15GeV electron-beam, MVD Hits

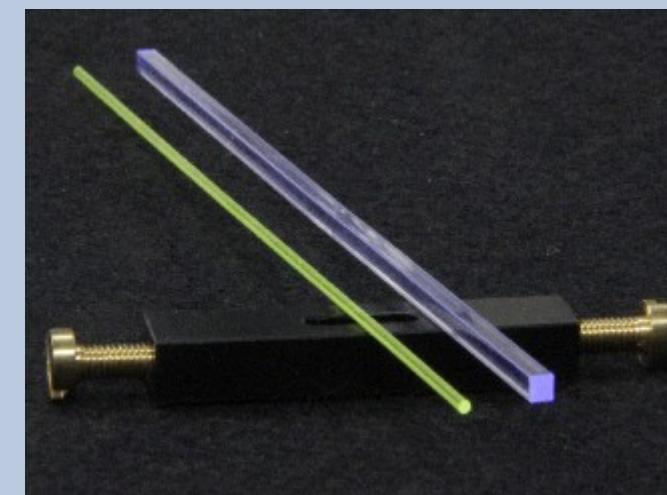

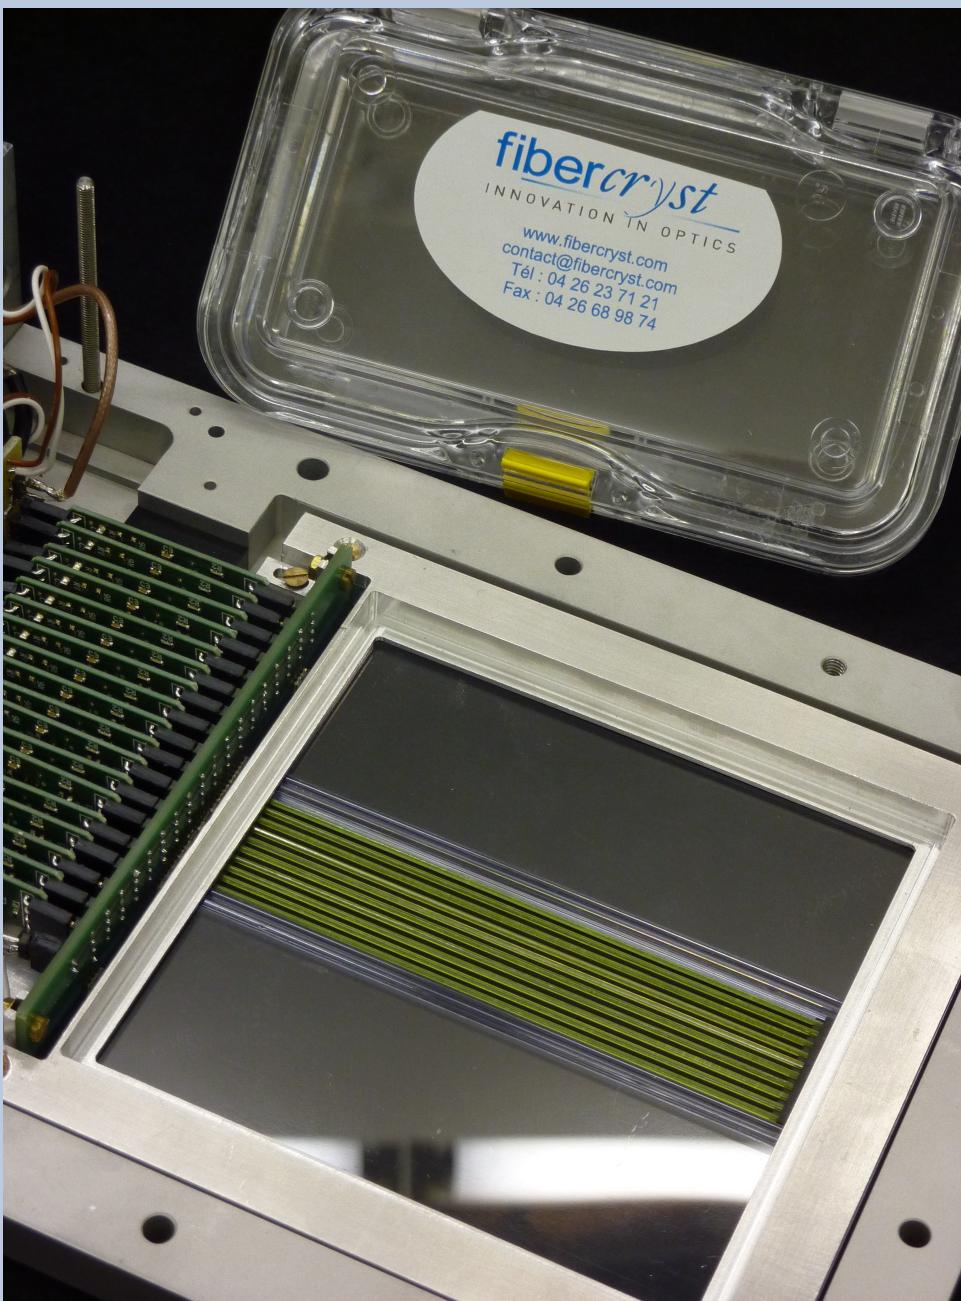

Hits on MVD silicon strip detector cut on two crossing central trigger fibres

- good performance
- simple and easy to use, robust detector
- used 10 days without any failure

1 mm Round LuAG Fibres, 10 cm Long

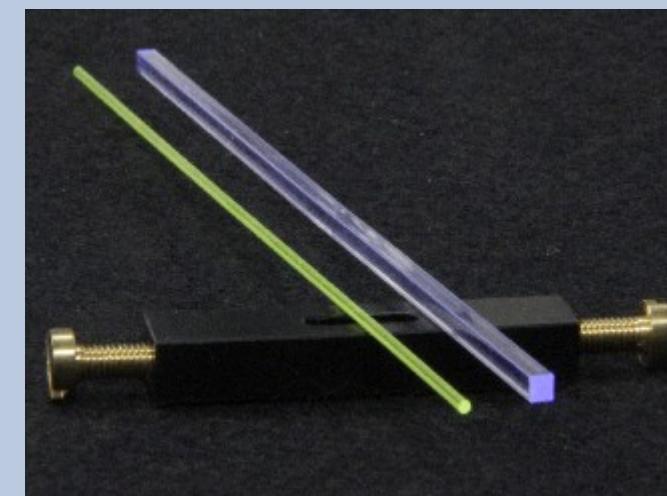

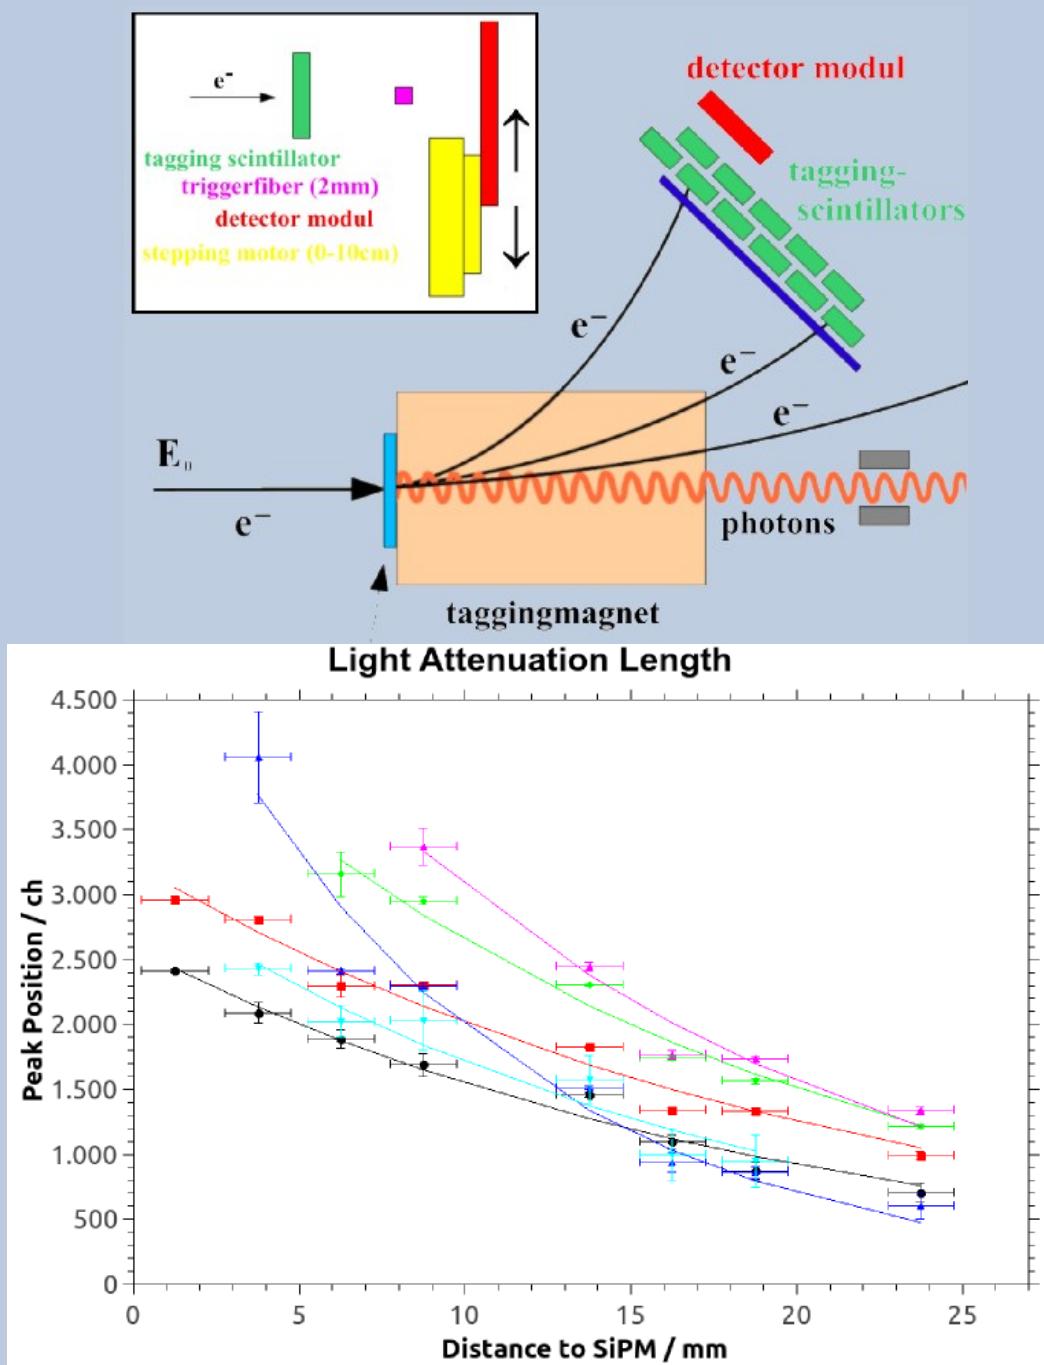

Fibres

- 20 LuAG:Ce tested
- 1mm diameter
- 10 cm length
- great interest in investigation of their characteristics

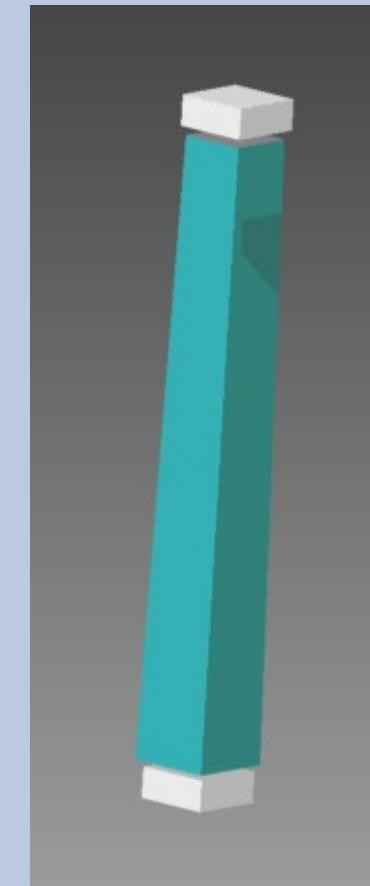

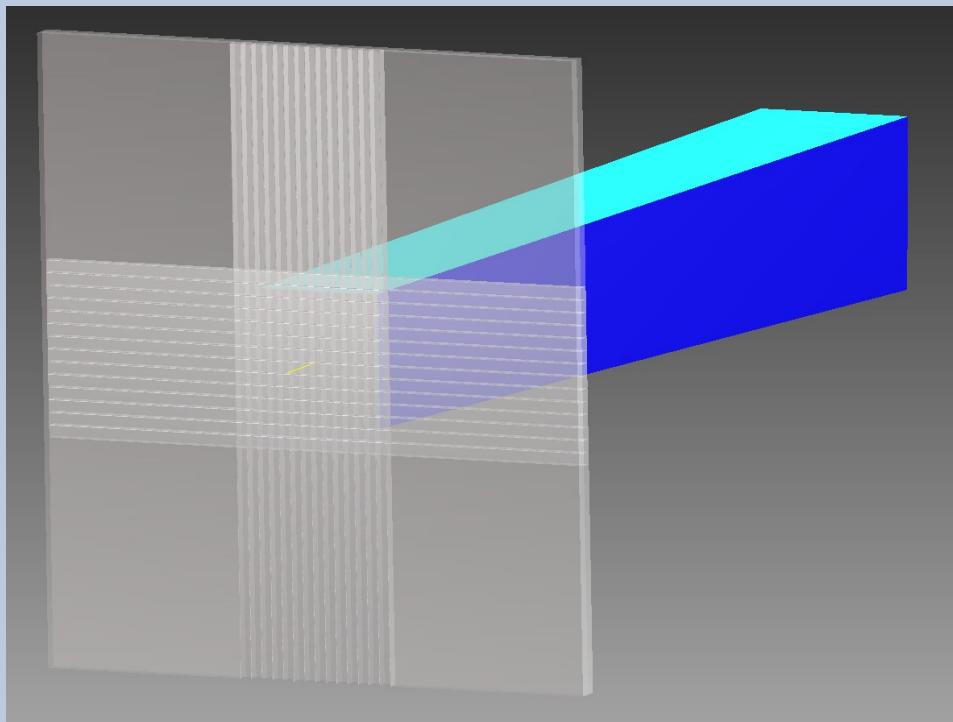

- attenuation length tested in Bonn @ELSA Accelerator

Fibres

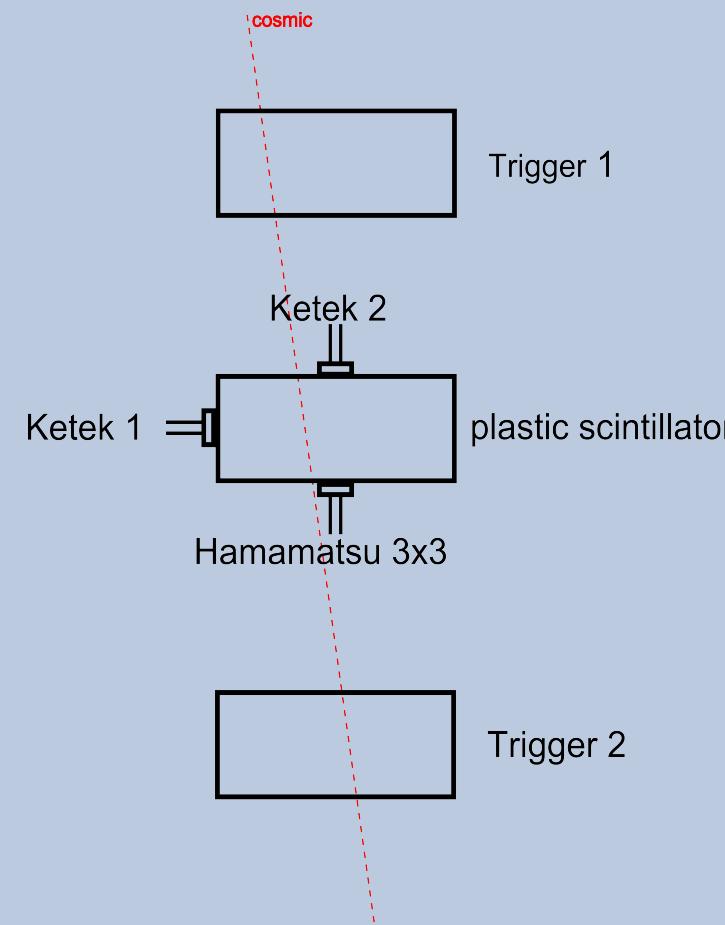

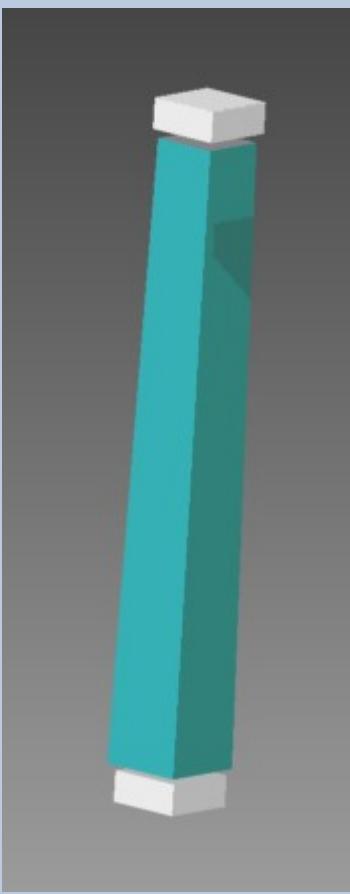

- fibres exposed to high-energy electrons
- fibres can be moved with vertically stepping motor into the electron beam
- distance to SiPM 0-10cm
- average light attenuation length ($15,9 \pm 0,6$)mm

Segmented trigger detector

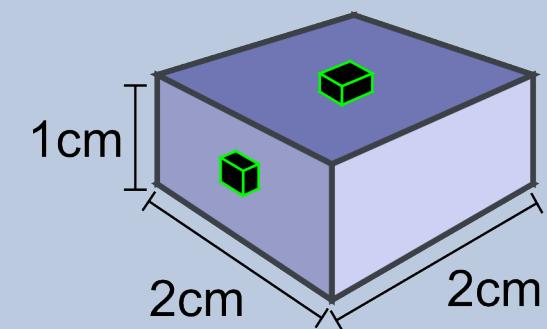

- Trigger detector for cosmic calibration of the Forwardendcap Calorimeter of PANDA-EMC
- **segmented design to trigger each crystal**
- compact readout, whole setup will be in climate chamber

Test setup

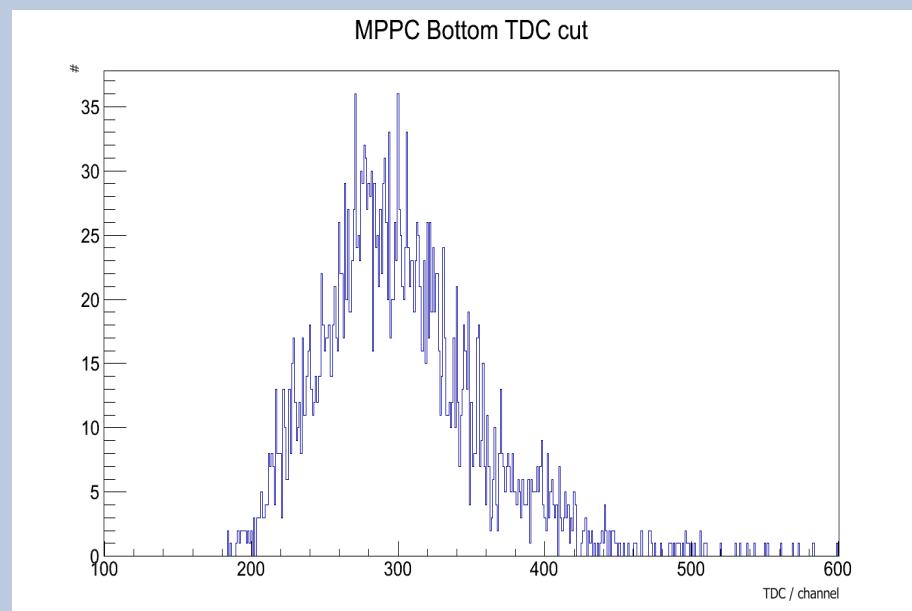

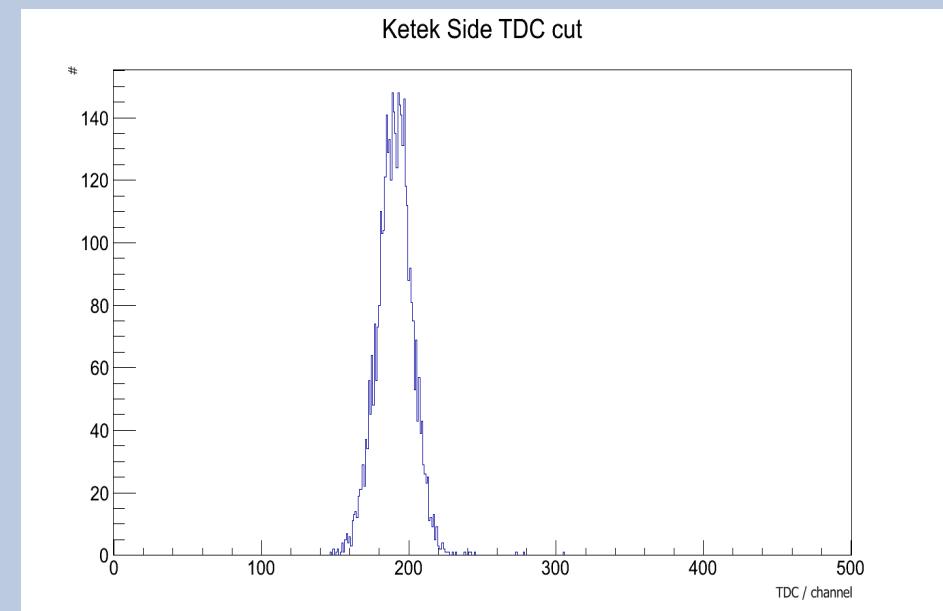

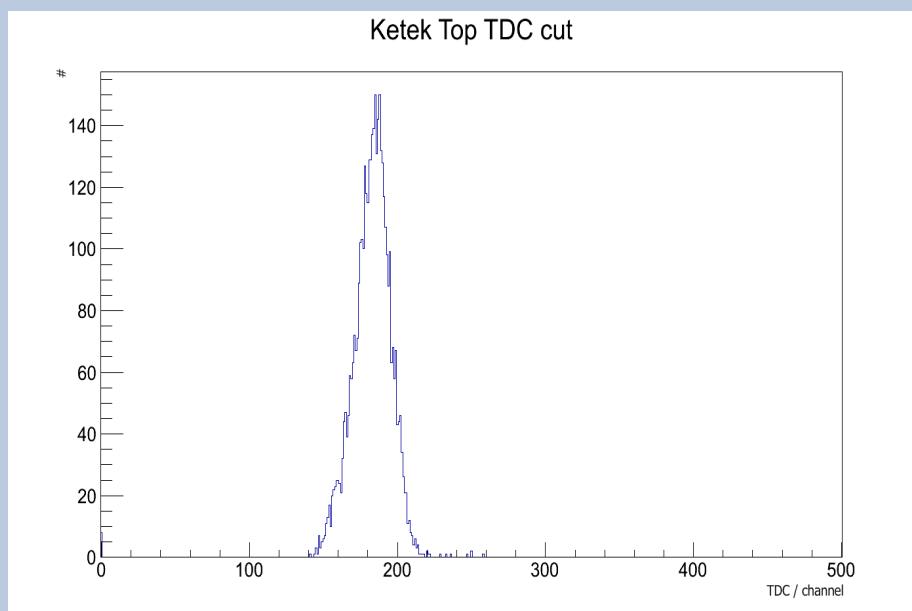

plastic scintillator:
EJ-200

- Trigger by 2 scintillators with PM readout
- Test different:
 - SiPMs
 - SiPM positions
 - coating

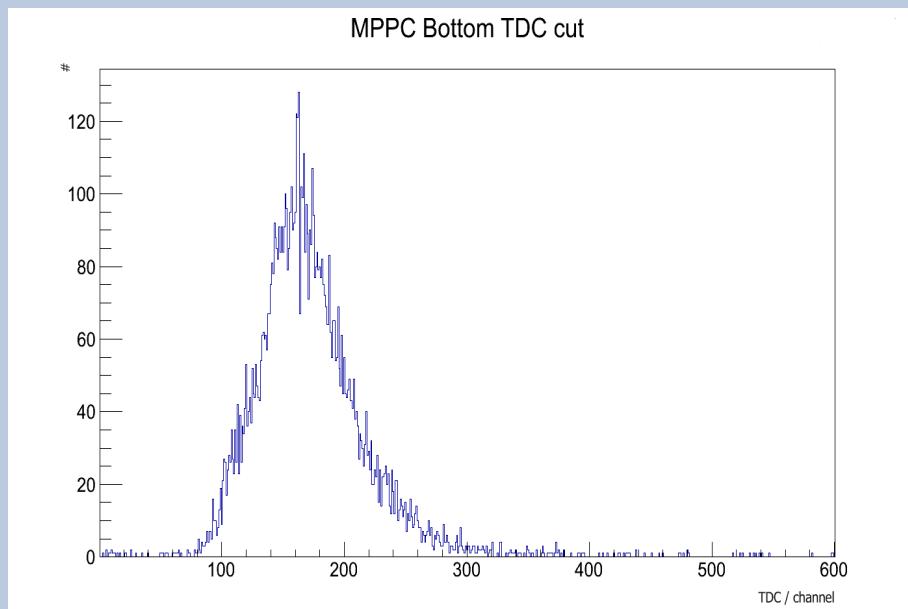

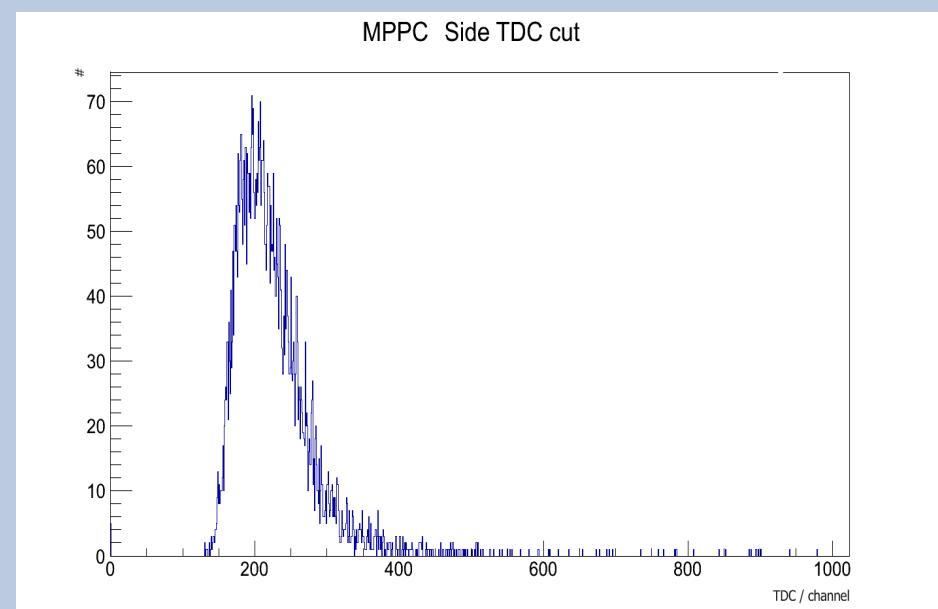

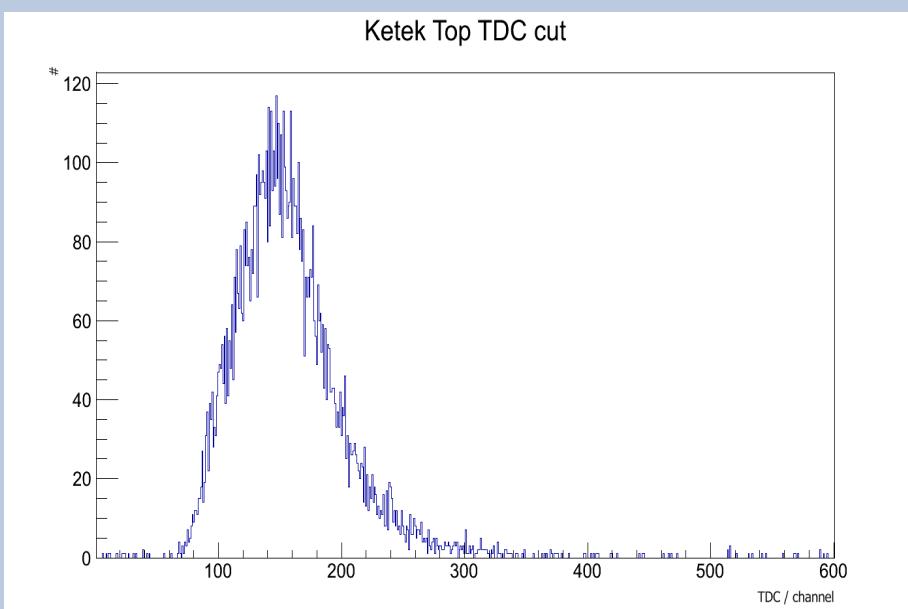

some results

Test with Mylar coating

SiPM	efficiency	timeresolution
Ketek Top	98,1%	568ps
Ketek Side	98,2%	584ps
MPPC 3x3 Bot	75%	2210ps

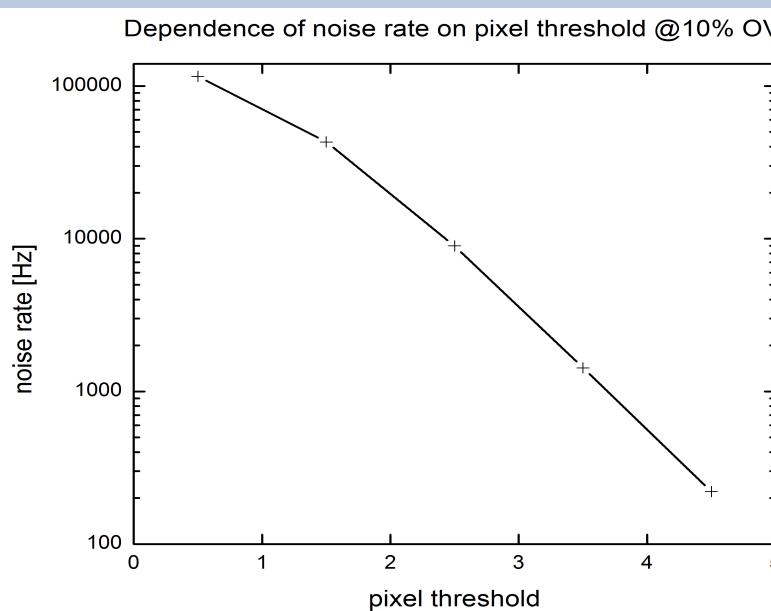

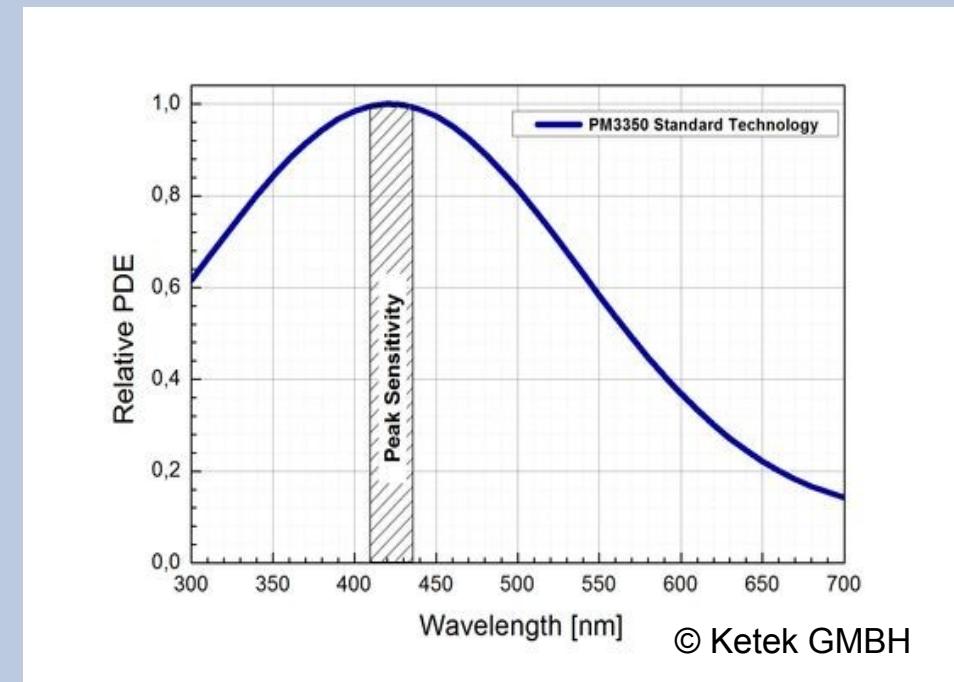

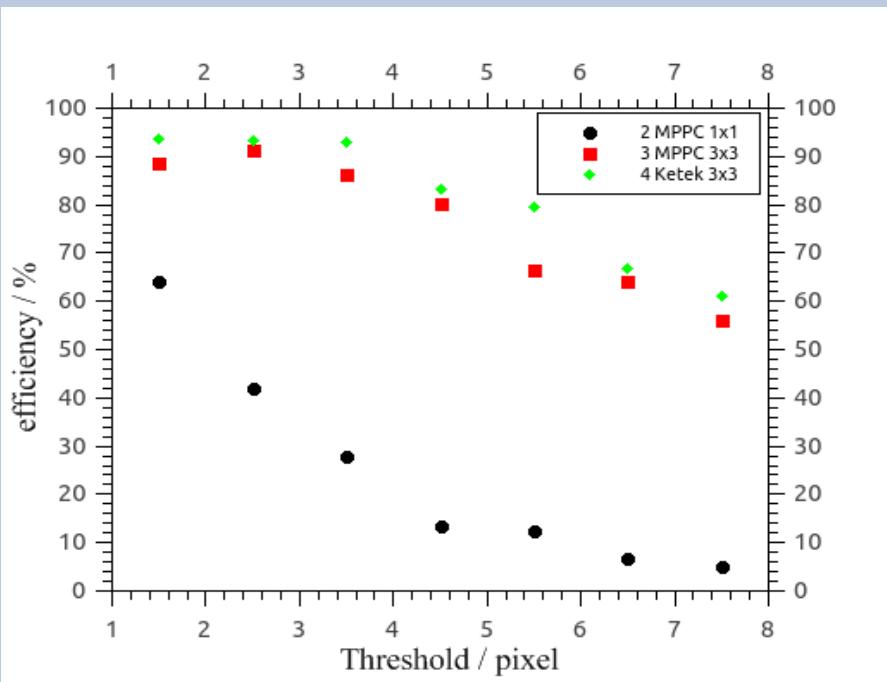

some results

Test without coating

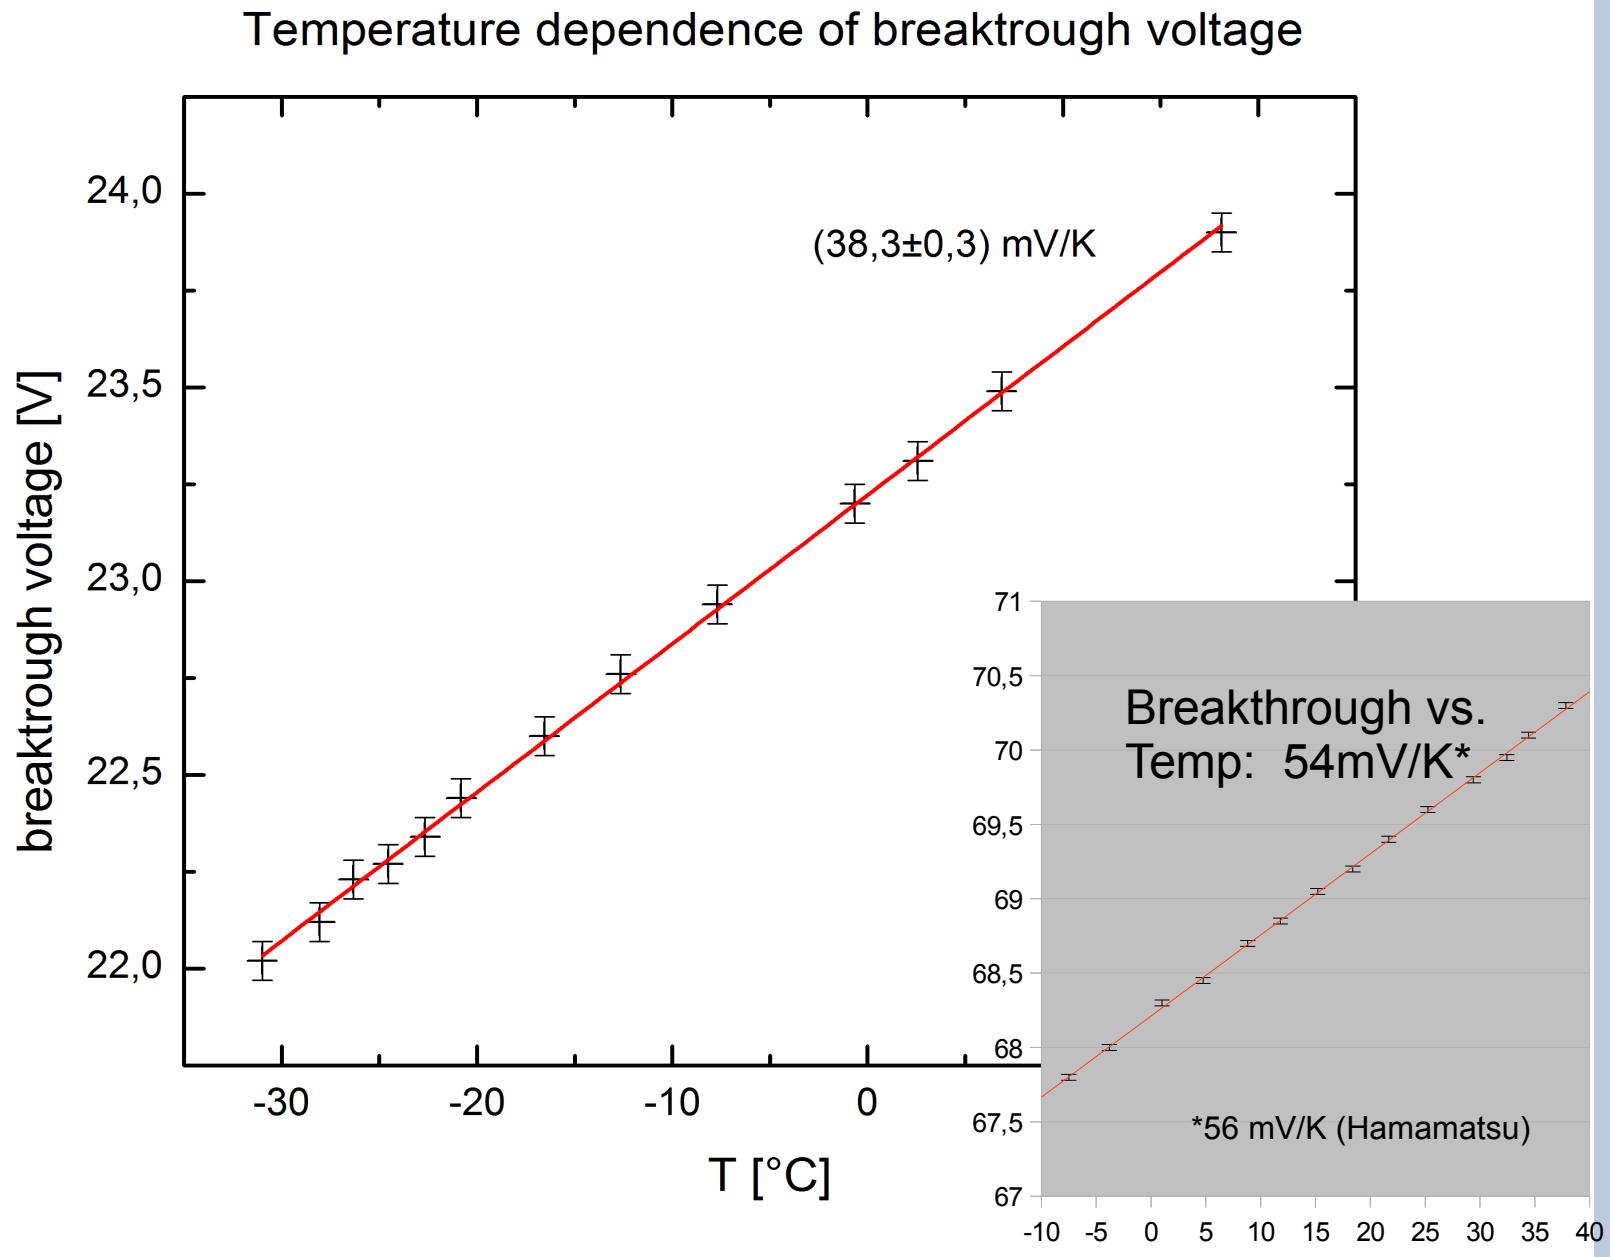

SiPM	efficiency	timeresolution
Ketek Top	94,0%	1,7ns
MPPC 1x1 S	62,3%	1,6ns
MPPC 3x3 Bot	88,2%	1,6ns

some results

- Ketek SiPM provides:
 - good PDE for blue light
 - good timeresolution
 - best signal to noise ratio

breaktrough voltage Ketek

Roadmap

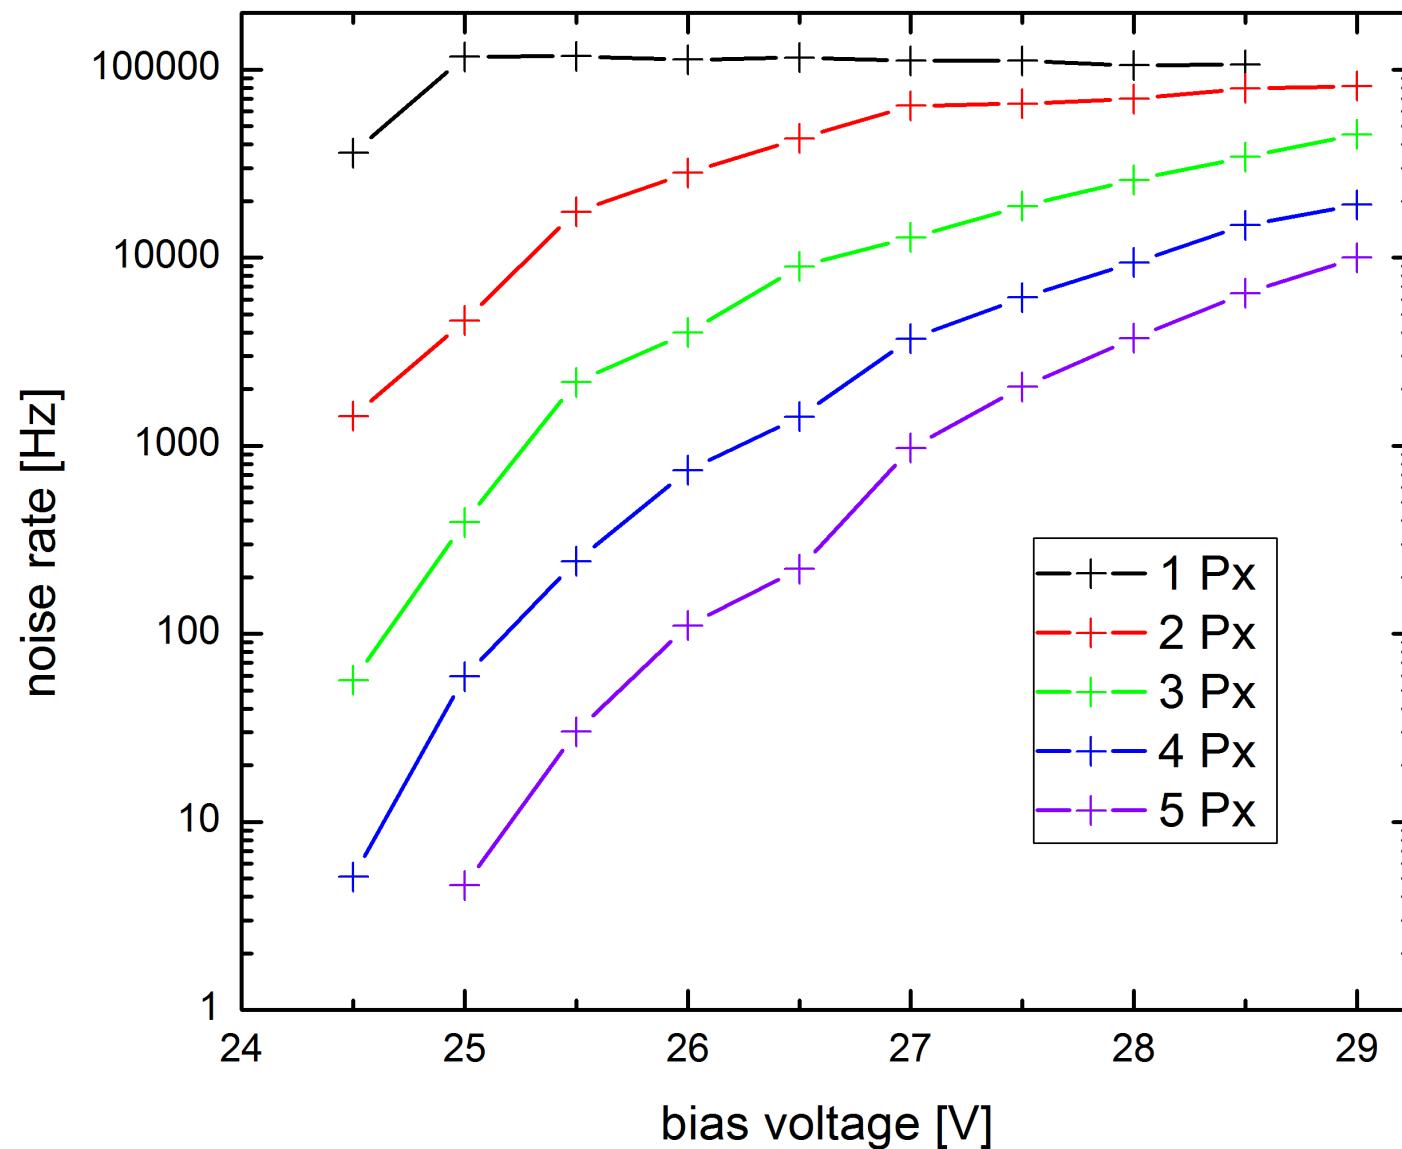

Detector tests:
more tests with different coating

Detector development:
mechanical design, shielding, differential
outputs, ...

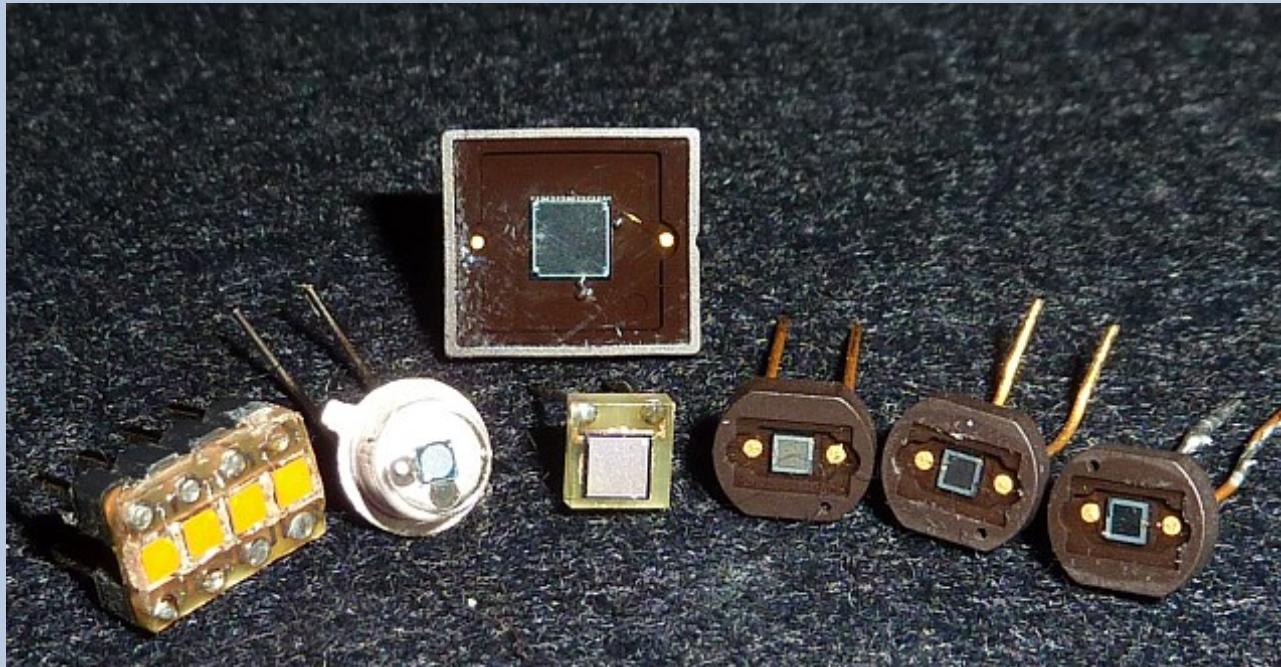

END

some more results

Bias dependence of noise events for different thresholds @18,5°C

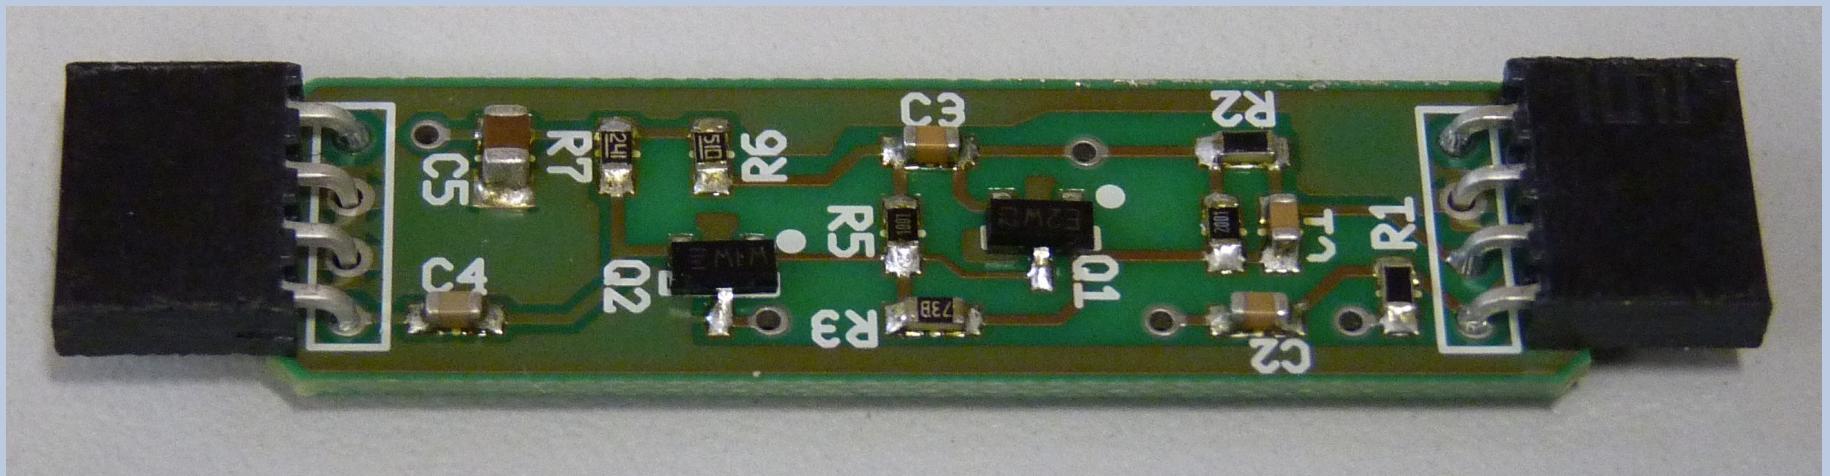

Selection of SiPM

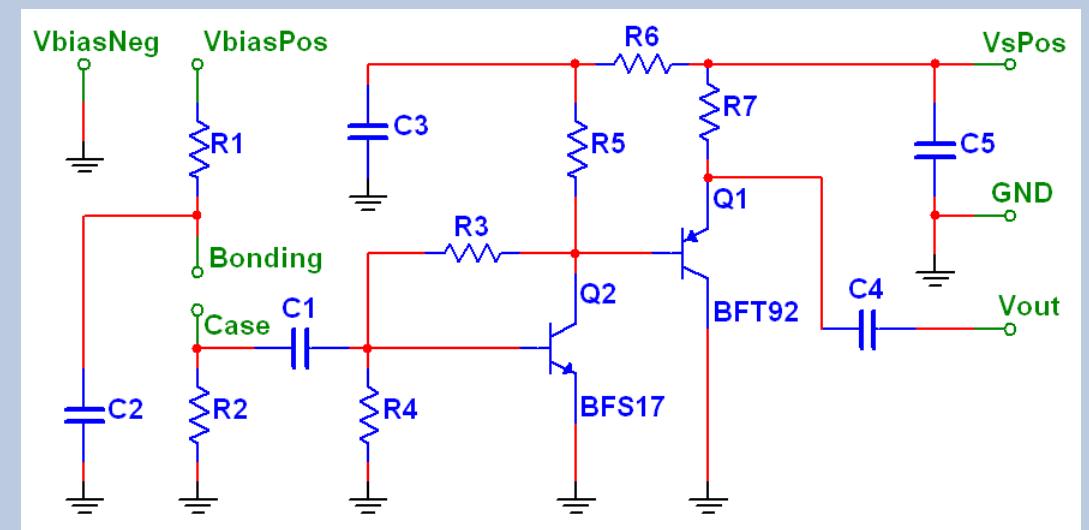

SiPM	Photonique			Hamamatsu S10362-11-			SensL
	0701BG	0611B4MM	Array	25C	50C	100C	Micro3035
Operating Voltage	31 V	36 V	20 V	70 V	70 V	70 V	28 V
active Area	1 mm ²	4,4 mm ²	1 mm ²	1 mm ²	1 mm ²	1 mm ²	8,1 mm ²
Pixels	556	1700	556	1600	400	100	3640
Fill Faktor	≥ 70 %	≥ 70 %	≥ 70 %	30,8 %	61,5 %	78,5 %	-
Gain	$4 \cdot 10^5$	$0,6 \cdot 10^5$	$4 \cdot 10^5$	$2,75 \cdot 10^5$	$7,5 \cdot 10^5$	$2,4 \cdot 10^6$	$1 \cdot 10^6$
PDE	40 %	25 %	≥ 10 %	25 %	50 %	65 %	20 %
λ bei max. PDE	560 nm	440 nm	560 nm	440 nm	440 nm	440 nm	490 nm
Darkrate	1,6 MHz	2,9 MHz	1,5 MHz	600 kHz	800 kHz	1000 kHz	10 MHz
Rise Time	≤ 0,7 ns	≤ 0,7 ns	≤ 5 ns	≤ 0,3 ns	≤ 0,3 ns	≤ 0,3 ns	≤ 5 ns

plus some more, i.e.
 Photonique - 2.2 x 2.2 red enhanced,
 - some older MEPhI/Pulsar Prototypes

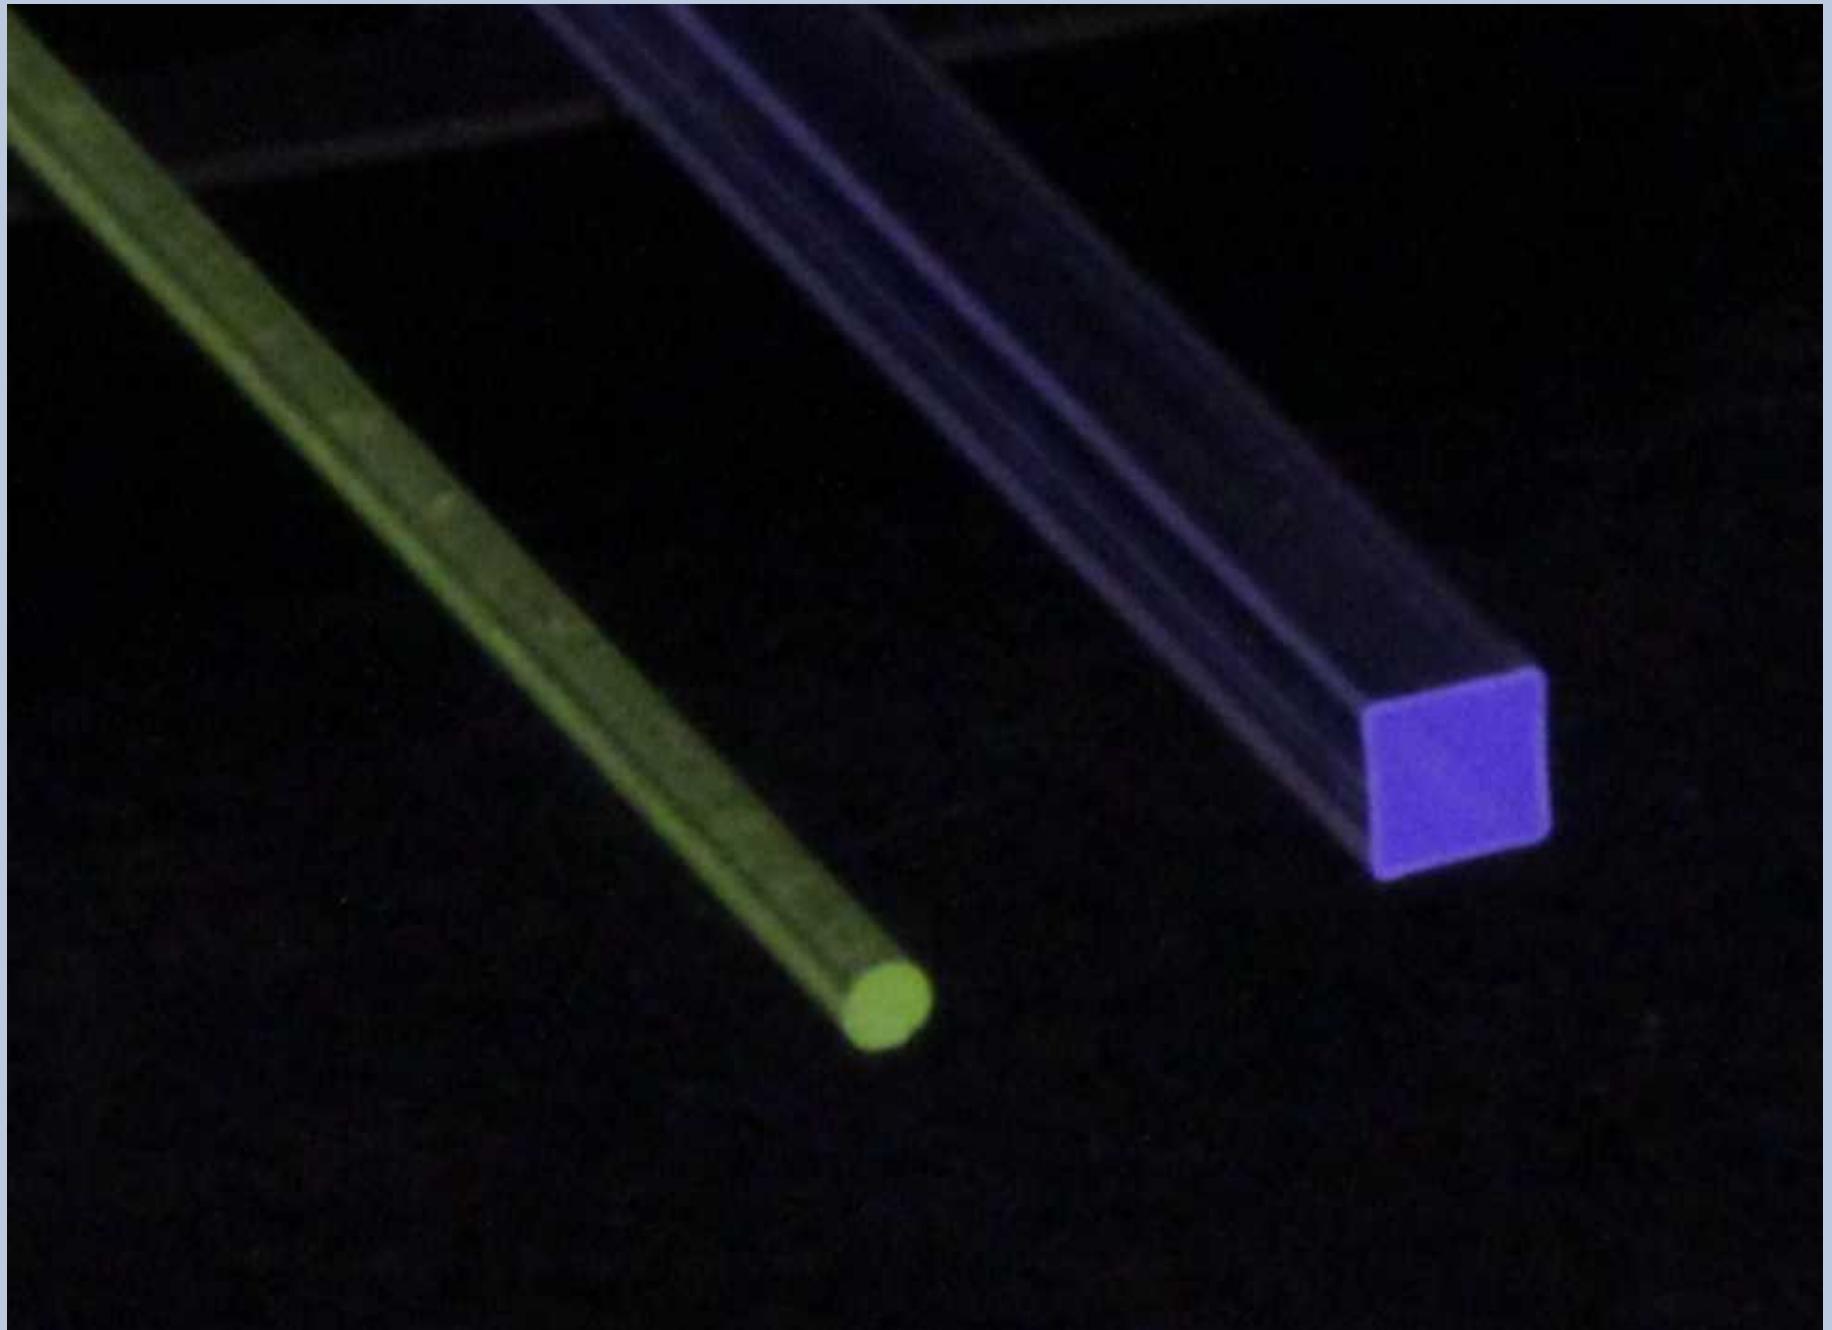

PreAMP

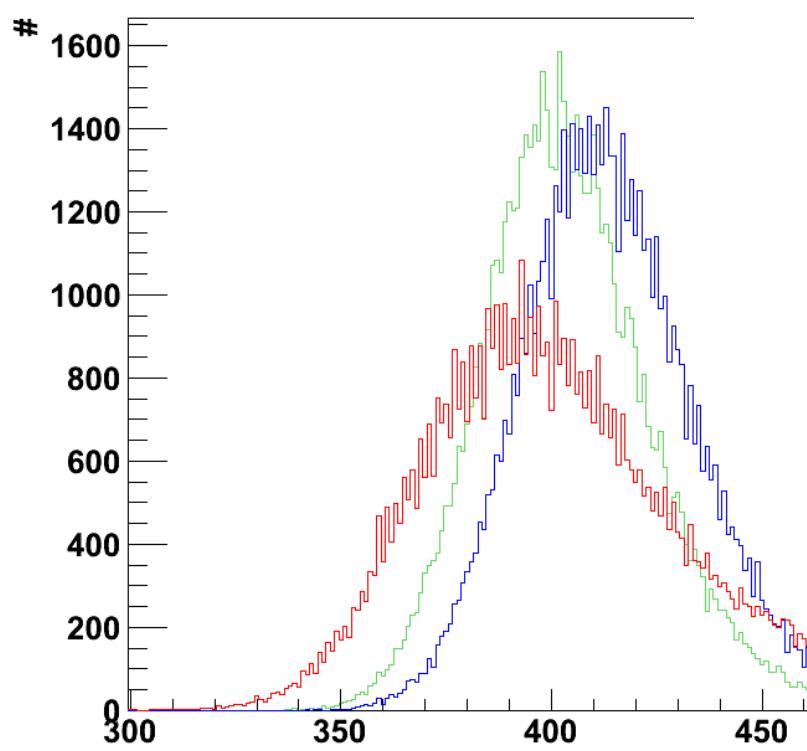

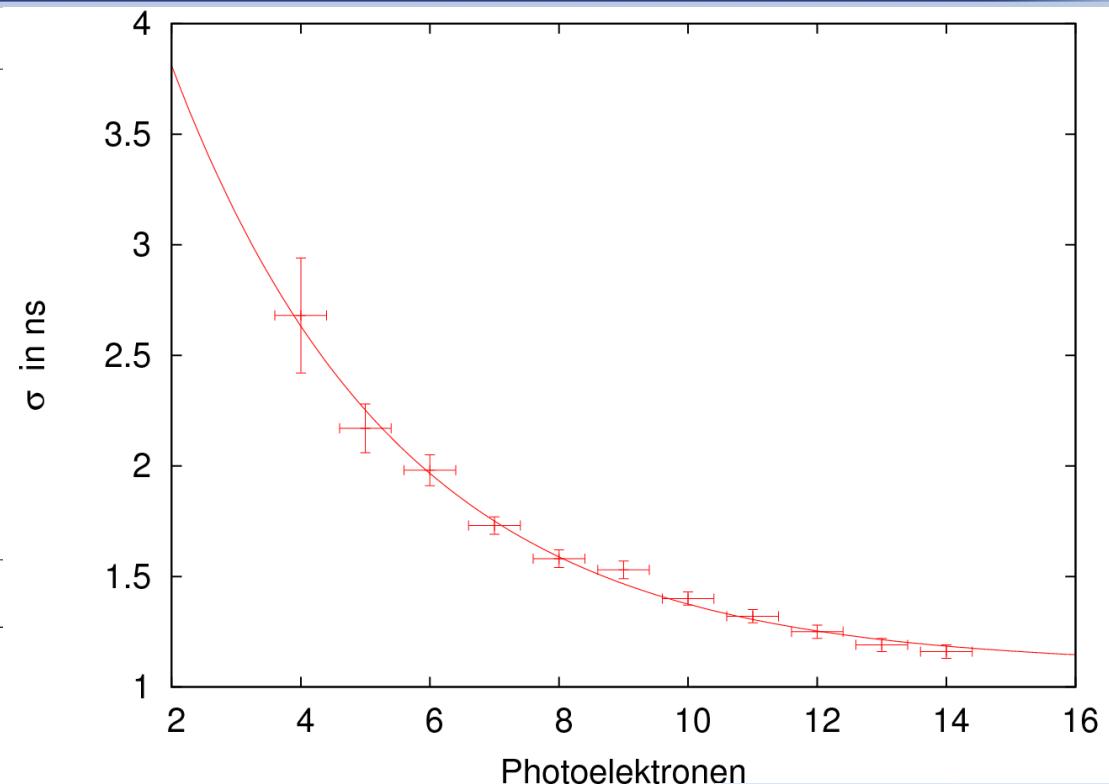

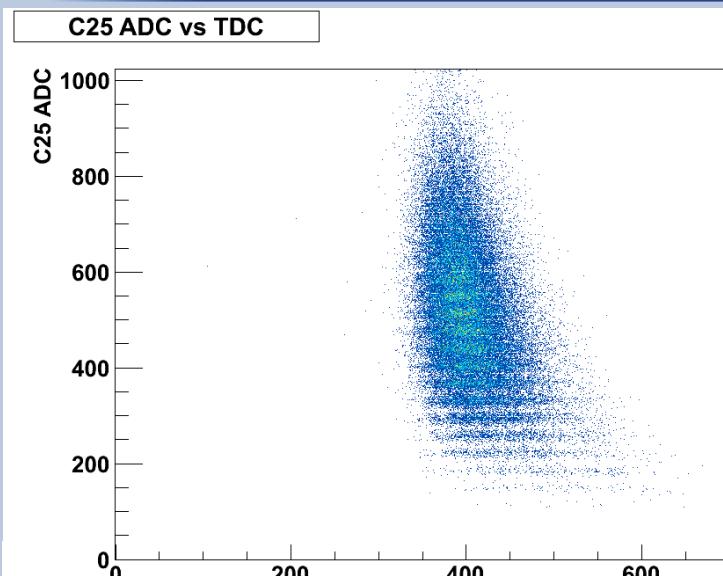

- individual, interchangeable PreAMPs
- 10V supply via SiPM board
- individual bias supply
- $\sim 50\times$ gain output

Fibre Closeup

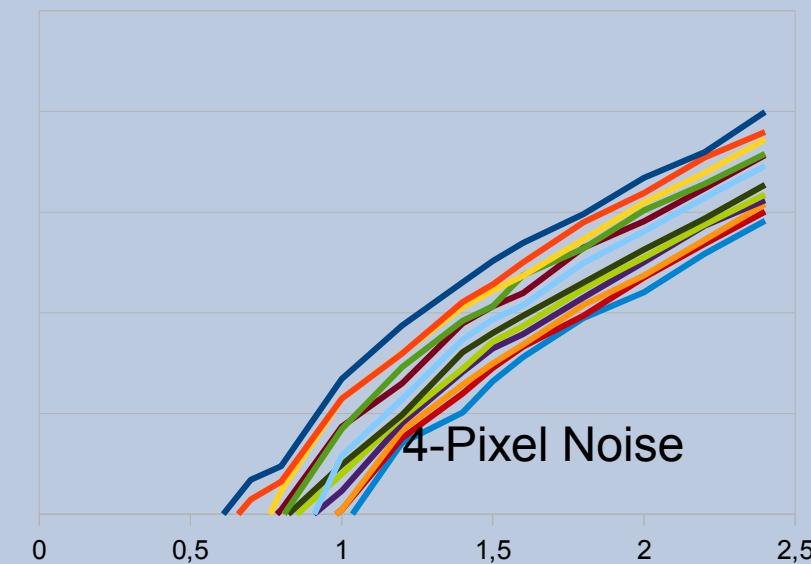

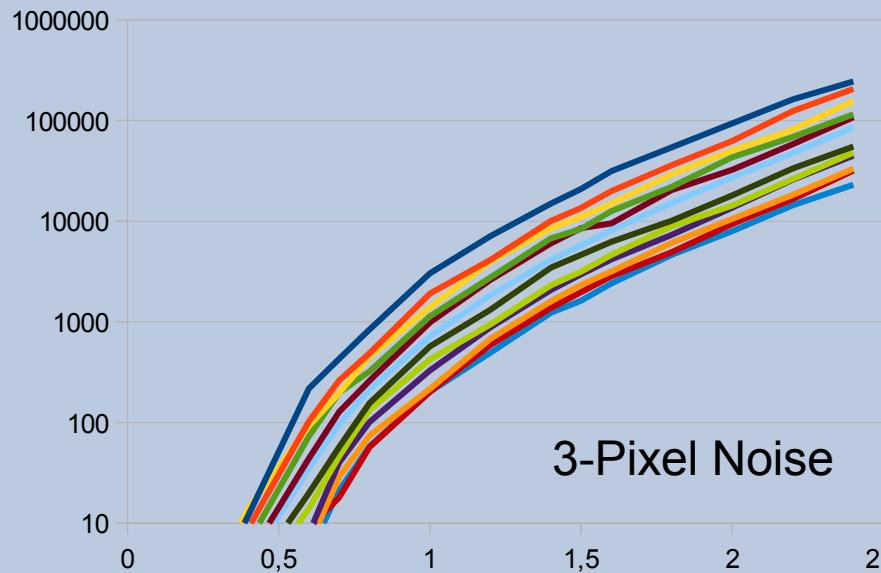

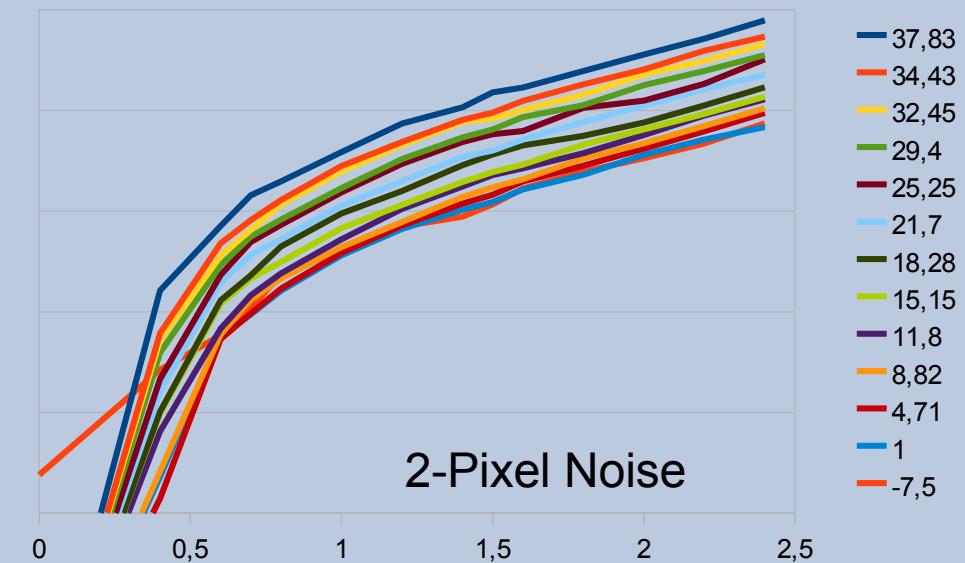

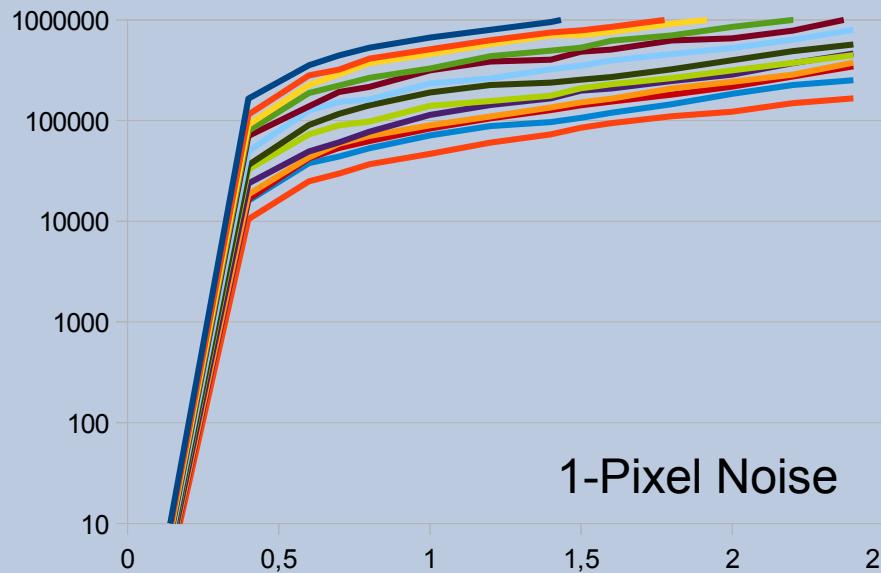

Time Resolution

Model	Sigma
100 C	0,90 ns
50 C	0,94 ns
25 C	1,28 ns

SiPM- Noise vs. OV

~ 1 Order of Magn. / 40 K (dep. on OV)

Gain vs. OV : $\sim 18,5 \text{ mV} / (\text{V} \cdot \text{Pixel})$
