What have we learned from the RHIC beam energy scan about the QCD critical point

Mittwoch, 17. September 2025 09:00 (40 Minuten)

I will discuss the present state with regards to the search for a QCD critical point, especially in view of the new high statistics data from the RHIC beam energy scan II. I will also discuss possible next steps needed to either confirm or rule out the existence of a CP in the region accessible by experiment.
