

The next DISC-DIRC Prototype

Working Principle

Focusing Light Guides

Radiator Mounting

500mm x 500mm x 20mm
Fused Silica

Ma-PMTs

A total 22 of these Sensors were used

16 stripes

They were

- 1) Directly coupled to the radiator
- 2) Attached to a FLG out of acrylic glass
- 3) Attached to a FLG out of fused silica

Ma-PMTs

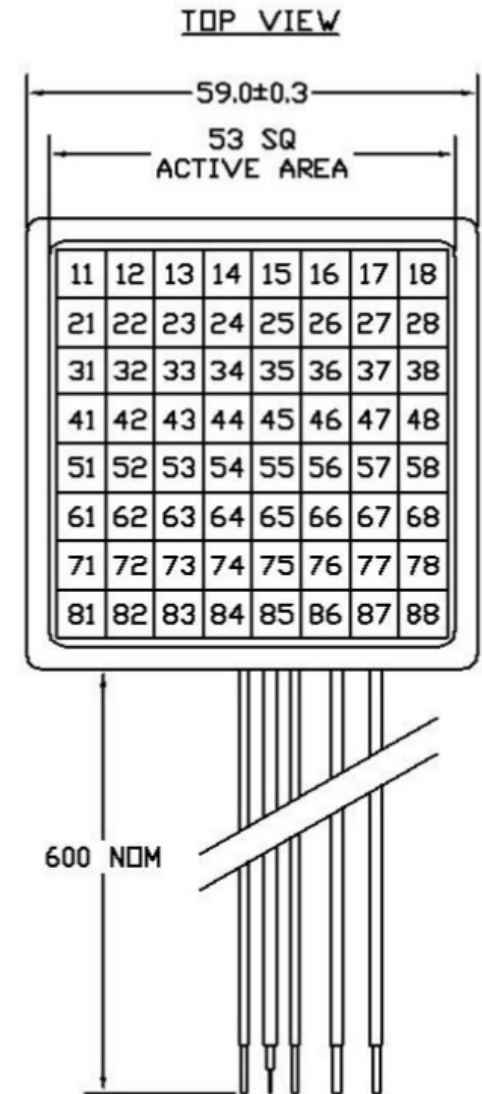

Direct coupling to the radiator

8x8 Planacon MPC-PMT

- 8 x 8 array, 5.9 / 6.5 mm (size / pitch)
- Active area 53 x 53 mm
- Directly coupled to the radiator
- Attached to a FLG out of acrylic glass
- Attached to a FLG out of fused silica

8x8 Planacon MPC-PMT

Readout

Overview

Scaled Sketch

Testbeam Setup 04.11.2013 view upstream

- N Plexiglas FLG mit PMT
 - P PMT direkt
 - D MCP direkt
 - Q Quartz FLG mit PMT
 - A Plexiglas FLG mit MCP
 - B Quartz FLG mit MCP
 - X Passiv (Mechanik)
- 14 Steckplätze pro Seite
30 vorhandene PaDiWas
- 1 PaDiWa pro PMT
2 PaDiWas pro MCP

Pictures from the Beam Site

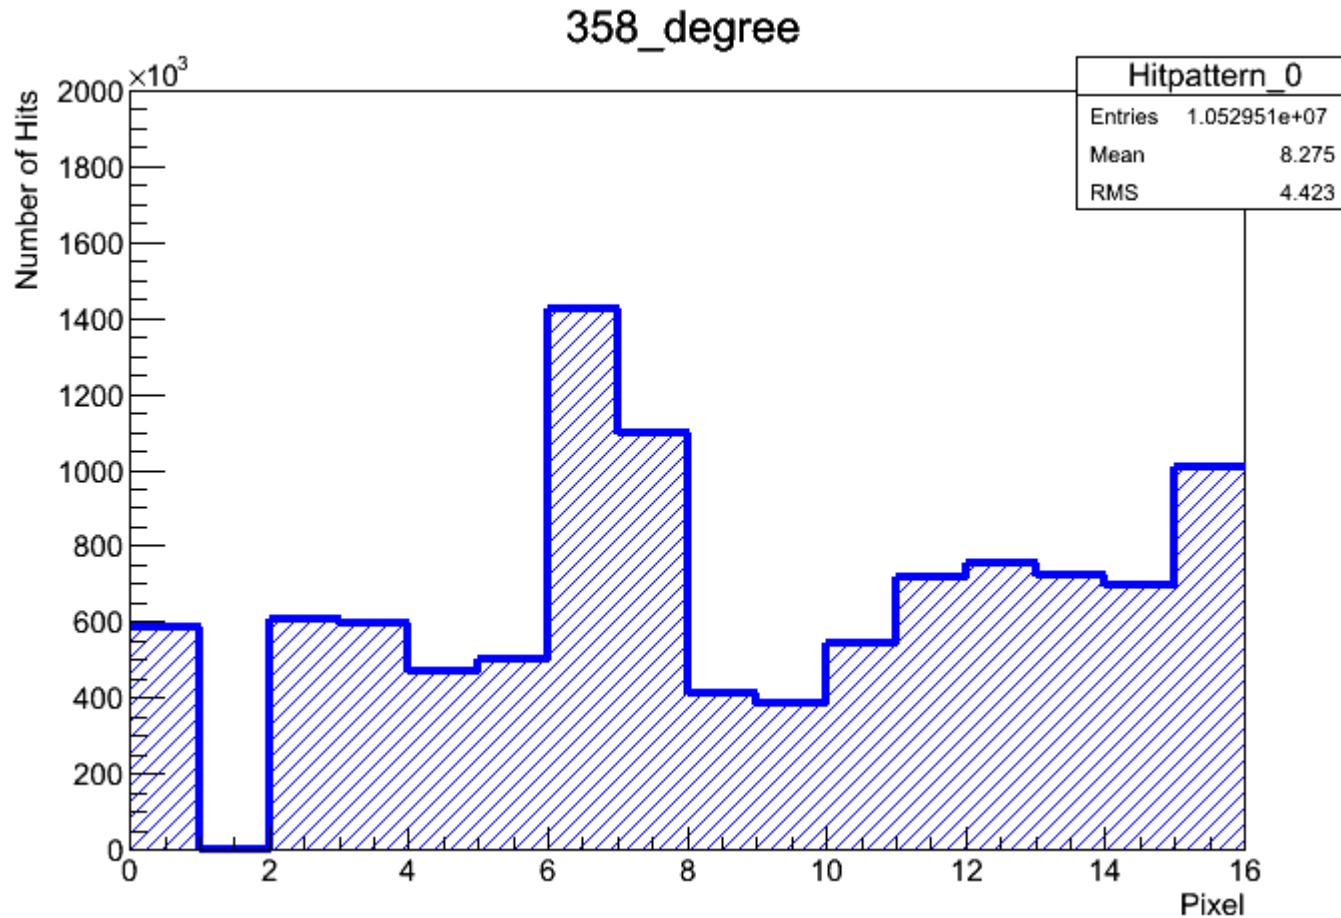

Pictures from the Beam Site

Results

- Hit distribution of the thin Quartz FLG with a MaPMT
 - Spectra are still unnormalized
 - Timing information unused so far

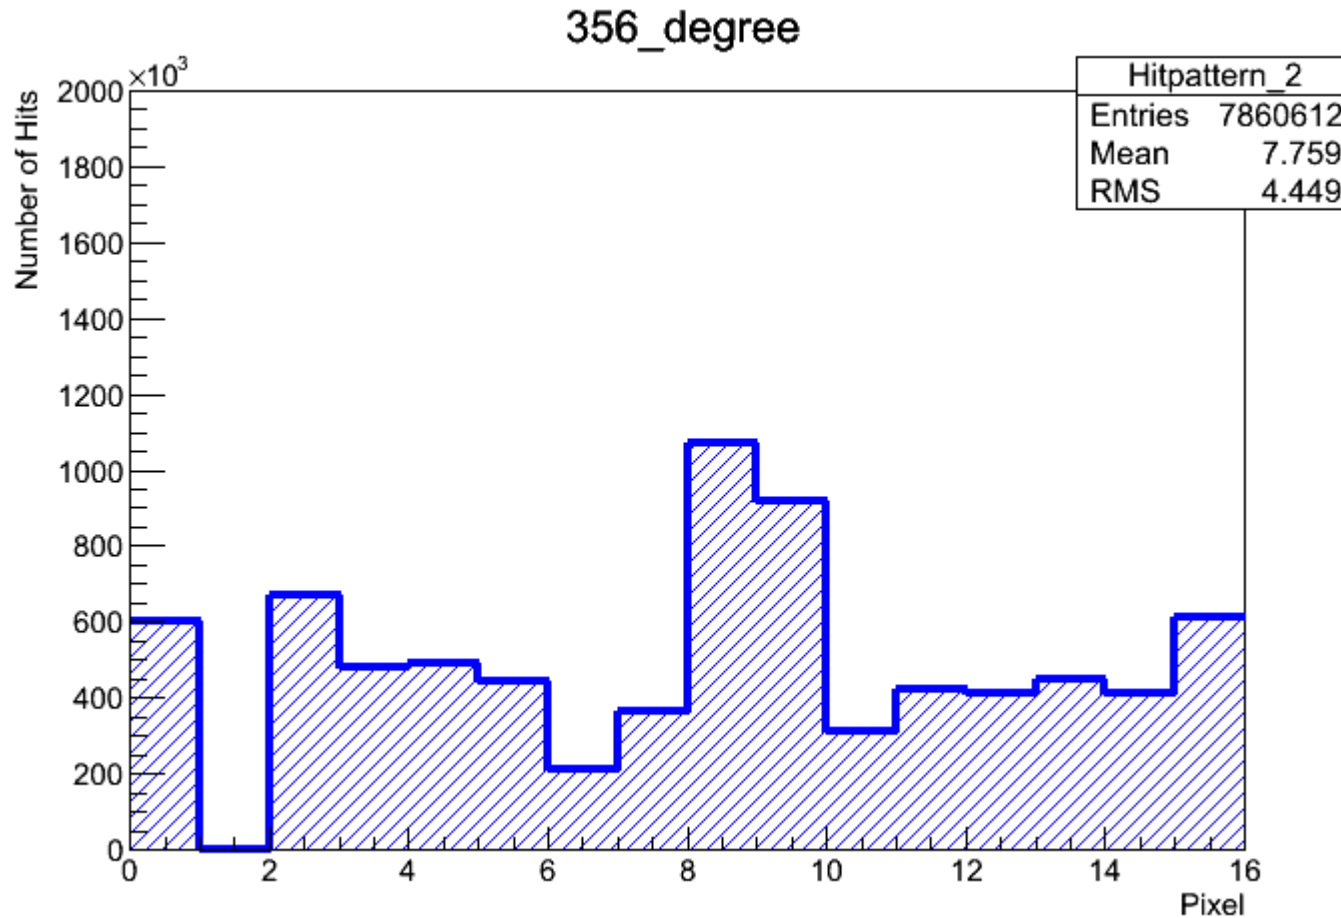

Results

- Hit distribution of the thin Quartz FLG with a MaPMT
 - Spectra are still unnormalized
 - Timing information unused so far

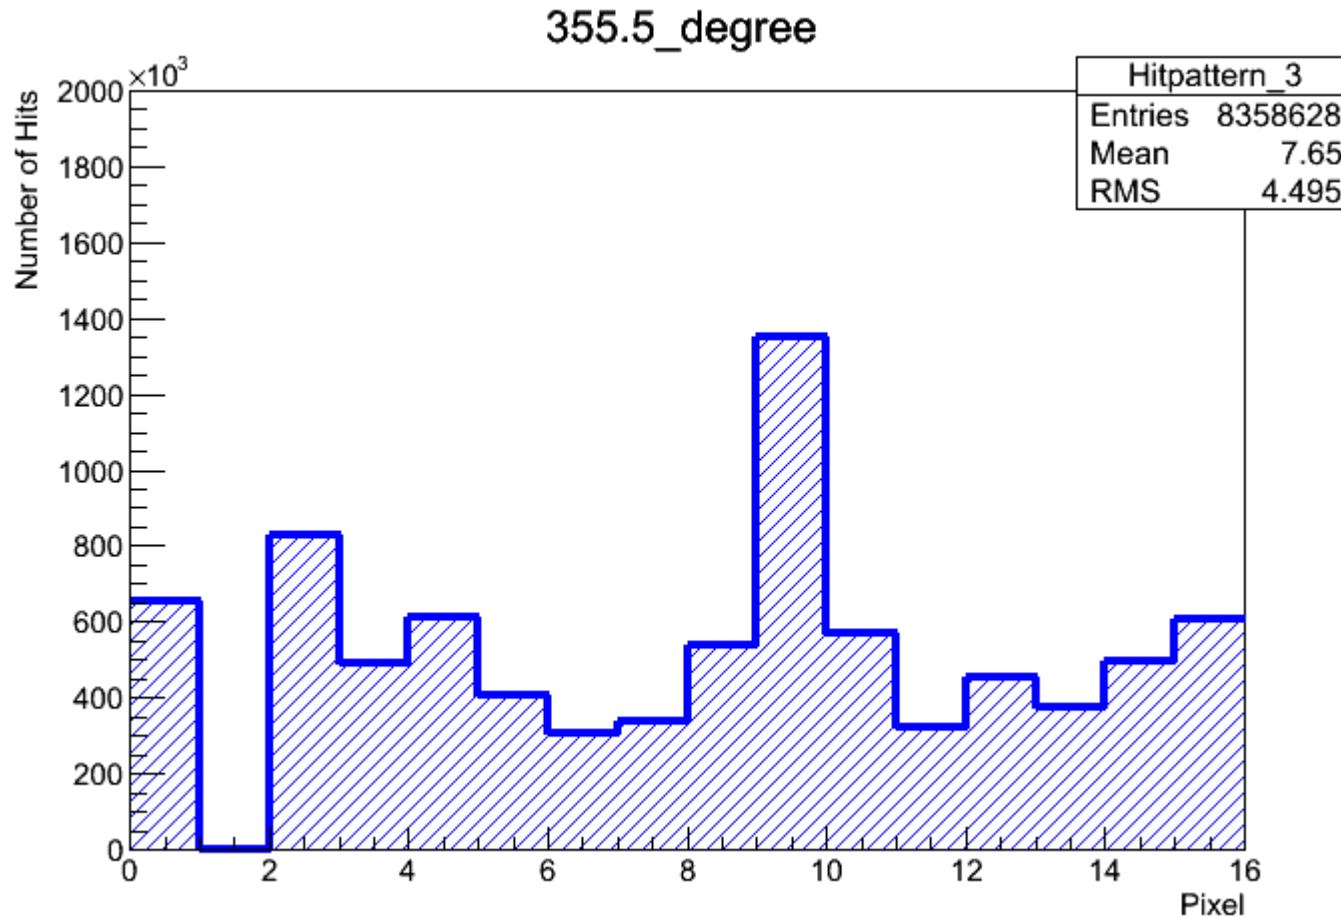

Results

- Hit distribution of the thin Quartz FLG with a MaPMT
 - Spectra are still unnormalized
 - Timing information unused so far

Outlook

- Timestamps in raw-data are puzzling
- Noise cuts have to be applied
- The data has do be analysed and compared to Monte Carlo

Thank you!
