Lattice Investigation of Heavy Meson Interactions

Saturday, 27 September 2014 18:00 (30 minutes)

We report on an investigation of tetraquark candidates with two very heavy quarks. These two quarks are treated in the static limit, while the other two are dynamical u, d, s or c twisted mass quarks. Different isospin, spin and parity quantum numbers are considered. The relation to systems of four dynamical quarks is discussed.
