

Overview of Rare Isotope Beam Facilities in Asia

Wednesday, 10 June 2015 09:30 (30 minutes)

A brief overview of the rare isotope beam (RIB) facilities in Asia (excluding Japan) will be given. Key instrumentations and possible future plans for each facility will be covered. The main focus will be on the status of three RIB facilities under construction in Asia: Rare Isotope Science Project (RISP) in Korea, low energy part of High Intensity heavy ions Accelerator Facility (HIAF) in China, and Advanced National facility for Unstable and Rare Isotope Beams (ANURIB) in India.

Primary author: Dr JEONG, Sunchan (Rare Isotope Science Project, Institute for Basic Science)

Presenter: Dr JEONG, Sunchan (Rare Isotope Science Project, Institute for Basic Science)

Session Classification: Future RIB facilities 3

Track Classification: Future RIB facilities
