# First results for the energy resolution of the PROTO120/PROTO7 with a tagged photon beam @Mainz

**Christoph Rosenbaum**, D. Bremer, S. Diehl, P. Drexler, V. Dormenev, T. Eissner, C. Le Galliard, M. Imre, M. Kavatsyuk, T. Kuske, D. Marchand, R. W. Novotny, P. Rosier, A. Ryantzev, P. Wieczorek, A. Wilms, H.-G. Zaunick

PANDA L. collaboration meeting

September 9th, 2014

PROTO120 beamtime in Mainz

## PROTO120

## PROTO60 vs. PROTO120

#### PROTO60

- single LAAPD readout with 1 cm<sup>2</sup> effective area (quadratic)
- low-noise low-power charge preamplifier (LNP)
- trick: different gains in inner and outer ring
- required resolution parameters achieved

#### PROTO120

- 120 PWO crystals of type 1, 2 and 3
- 2 LAAPDs per crystal
- APFEL readout 1.4 with final dynamic range

イロト 不得下 イヨト イヨト

- close to final mechanics
- new x-y-z table

C. Rosenbaum (JLU Gießen)

## Readout of PROTO120

- 2 LAAPDs are read out simultaneously by one APFEL ASIC 1.4
- two channels with different gains
- dynamic range of 10000
- programmable amplification between 16-32

C. Rosenbaum (JLU Gießen)

## Beamtime in Mainz

• assembly at MAMI

C. Rosenbaum (JLU Gießen)

PROTO120 beamtime in Mainz

## Setup

- read out 7 crystals (28 channels) of type I with SADCs (SIS3302)
- 830 MeV tagged photon beam
  - calibration run in each crystal
  - one long run in the central crystal
- currently only high gain with relative gain 32 analysed

### Feature extraction

• pulse height (pulse maximum - baseline) is extracted as energy information

## ASIC Gain variation

## Relative calibration

• Fitting Novosibirks function:

$$f(x) = Ae^{-\frac{1}{2} \left(\frac{\ln^2(1+\Lambda\tau(x-\mu_{max}))}{\tau^2} + \tau^2\right)} \quad \text{with} \quad \Lambda = \frac{\sinh(\tau\sqrt{\ln 4})}{\sqrt{\ln 4}\tilde{\sigma}}$$

and asymmetry  $\tau,$  width  $\tilde{\sigma}\equiv\frac{FWHM}{2\sqrt{\ln4}}$  and mode  $\mu_{\max}$ 

ELE DOO

## Relative calibration

• Relative calibration with the central crystal as reference crystal:

Rel. Calib.

## Peak sum vs. peak central as a function of energy

Central vs. Sum

< 17 →

## Noise I

#### Definition of noise: RMS of the baseline

#### Noise

 $\Rightarrow pprox$  0.7 MeV

C. Rosenbaum (JLU Gießen)

## Noise II

Definition of noise: Maximum value of baseline - baseline

#### Noise

 $\Rightarrow \approx$  1.5 MeV  $\rightarrow$  consistent with 4 MeV threshold

C. Rosenbaum (JLU Gießen)

ъ

#### Energy Resolution (preliminary)

- $\bullet~10.02\%$  at 100 MeV and 5.69% at 300 MeV for 4 MeV threshold and two APDs
- no difference between one or two APDs at energies above 200 MeV
  - negligible influence of photon statistics
  - effect of different APD Gain?
- achieved threshold acceptable?
- different Feature Extraction?
  - use integral as energy information
  - different spike rejection
  - add traces before feature extraction (similar to CMS)
  - fit a function to the traces
- saturation starting at 300 MeV
  - $\rightarrow$  using low gain when high gain saturates

• • • • • • • • • • • •

• still some hardware issues:

- $\bullet\,$  reducing pick-up in a different way  $\rightarrow$  grounding concept?
- optimal use of the space  $\rightarrow$  especially warm area
- ASIC not accessable after mounting of crystal matrix to backplate
- Back PCBs: holes and size do not fit backplate layout
- thermal insulation / cooling concept: replacement formakeshift styrofoeam as insulation and bend protection for inner plastic tubes
- improving flex cables (rigidity and length)
- HV distribution box and HV cables strong source of pick-up noise
- one HV for four detectors instead of one HV for each detector
- current test just with commercial SADCs

< ロ > < 同 > < 三 > < 三

#### Issues

• buffer boards / signal cables: polarity has to be clearly defined

30 / 33

## Outlook

- Next beamtime (January?):
  - all 120 crystals
  - $\bullet~3\times3$  matrix with roughed crystals
  - $\bullet~3\times3$  matrix with asics with common ground

I= nac

イロト イヨト イヨト イ

## Outlook

- Next beamtime (January 2015?):
  - all 120 crystals
  - $\bullet~3\times3$  matrix with roughed crystals
  - $\bullet~3\times3$  matrix with asics with common ground

#### Thank you for your attention!
