

A detailed 3D cutaway diagram of the redesigned PANDA beam pipe. The diagram shows a complex, multi-layered cylindrical structure with various internal components, including what appears to be a central beam pipe, surrounding support structures, and various layers of shielding or cooling. The components are color-coded in shades of blue, red, yellow, and purple. The entire structure is mounted on a complex metal frame with various supports and alignment mechanisms.

CAD by Jost

ROOT Geometry by me

# Some details

# Solenoid section

# Dipole section

# Fieldguides

# The beam pipe acceptance

- 1.5 GeV/c beam momentum at 1T solenoid field strength
- 2-10 mrad antiprotons at  $z = -35.3$  cm  $\rightarrow r \sim 2.8$  mm at  $z = 0$
- vacuum in cave

angular acceptance at  $z = 1050$  cm

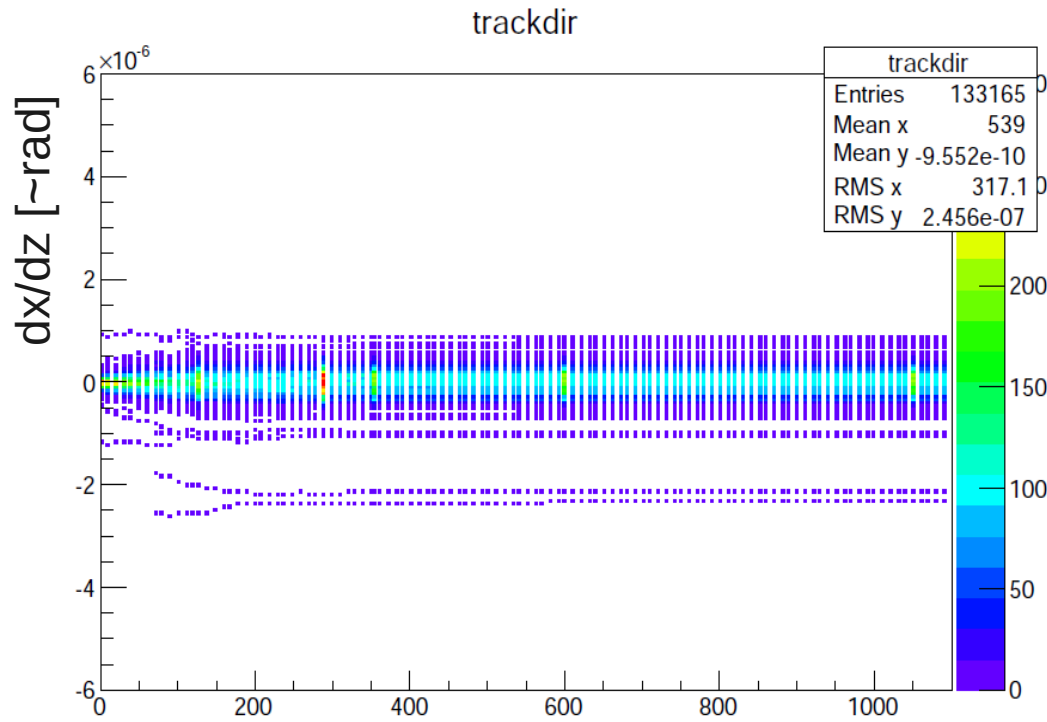

Acceptance loss again in the region  
of the dipole between 5m and 6 m  
behind the Interaction point  
 $\rightarrow$  design seems to be ok

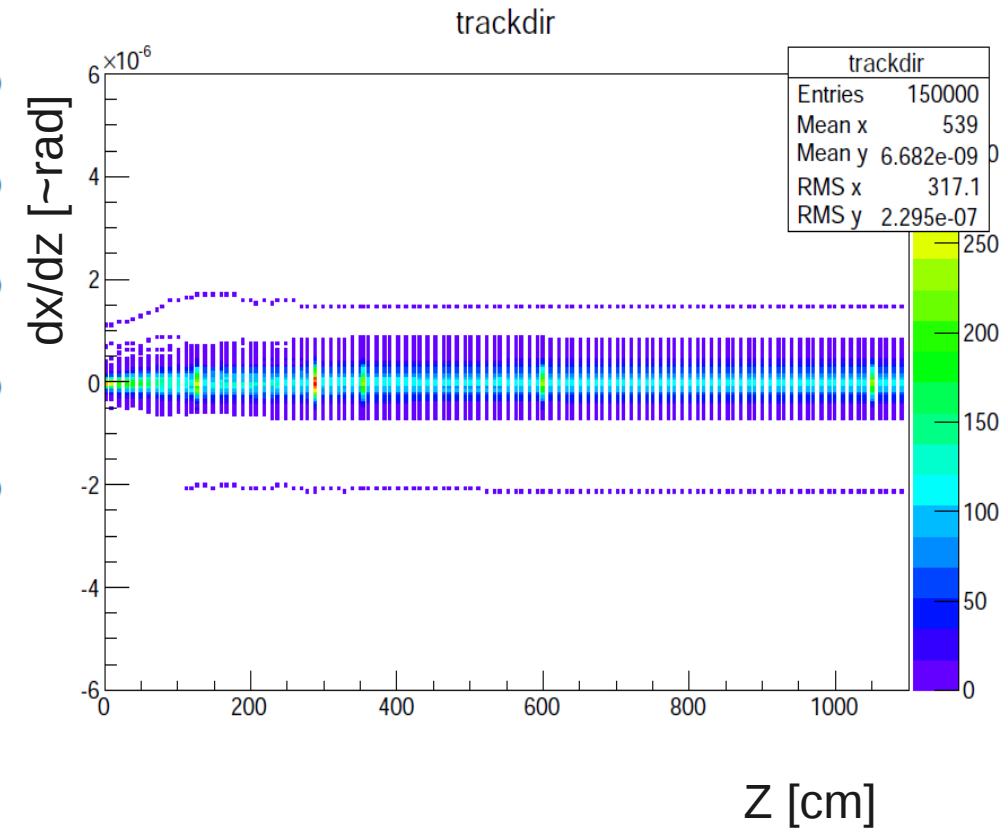

I committed the file  
beampipe\_201407.root  
in pandaroot already

# Beam tightness checks

## Track direction with air cave

## Track direction with vacuum cave

# To do

Check the influence of field guides
