

# Overview of the STT prototype results in December '14 beam-time for the ASIC/TRB readout

Alexandros Apostolou | 9 June 2015

## Beam and setup overview

Proton beam with different momenta: 0.8, 1.0, 1.3, 2.0 GeV/c

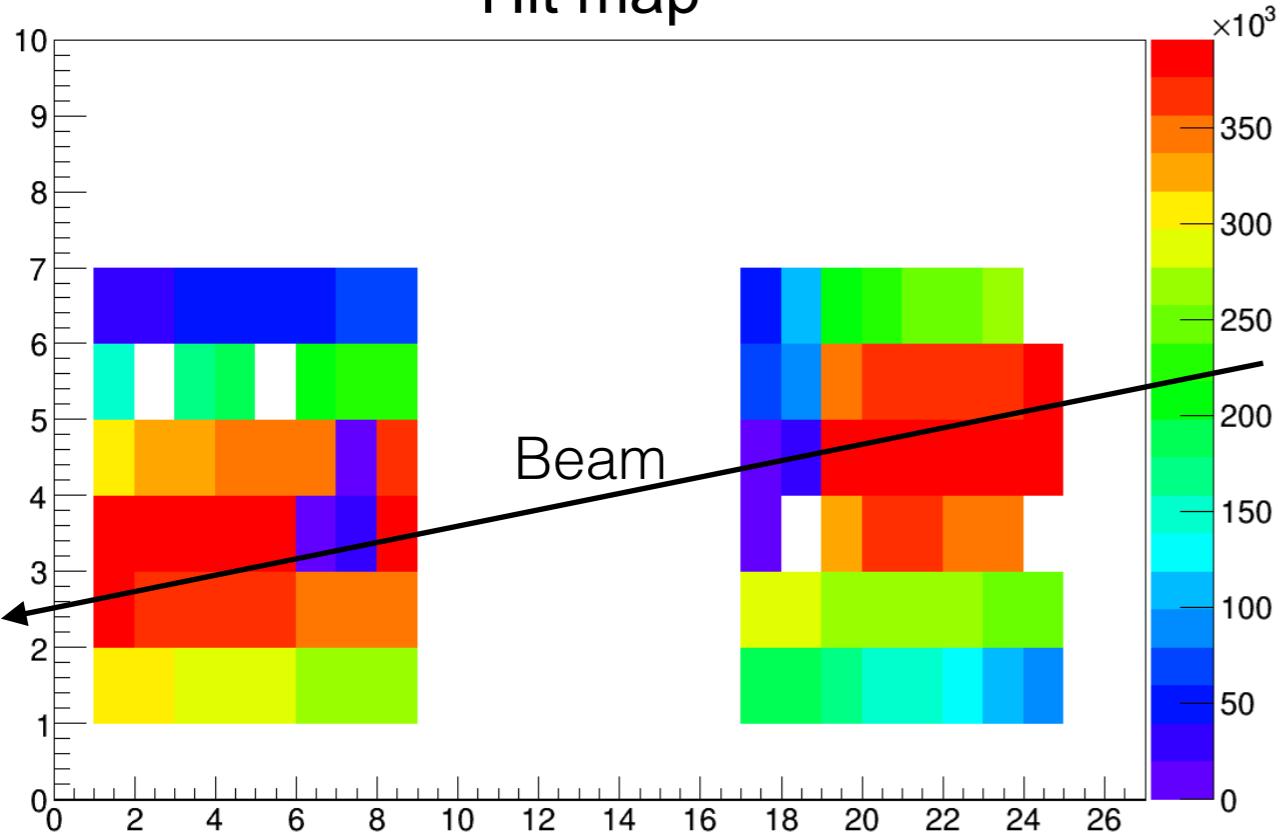

Beam intensity ranging from 80 kHz to 200kHz

96 channels/tubes

Voltages: 1700, 1750, 1800, 1850, 1900 V

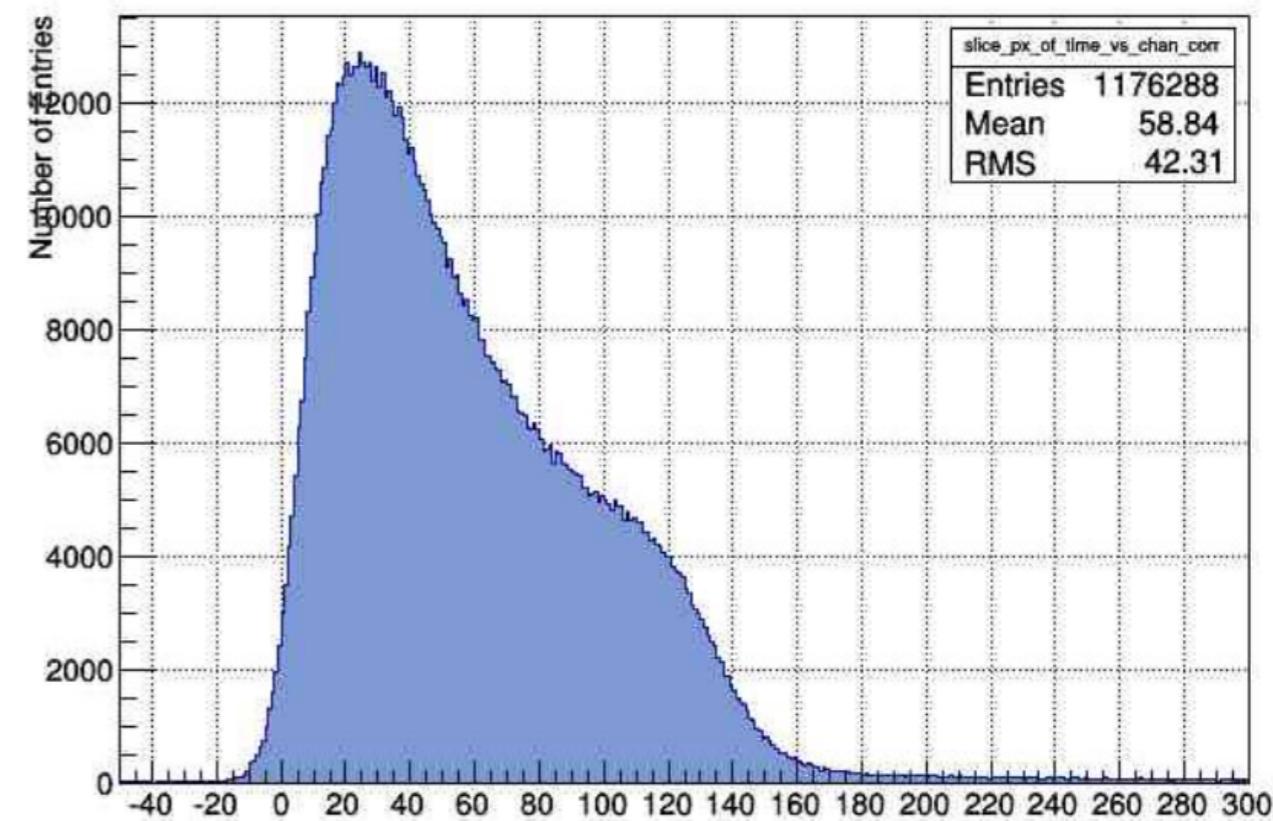

# General plots

Hit map

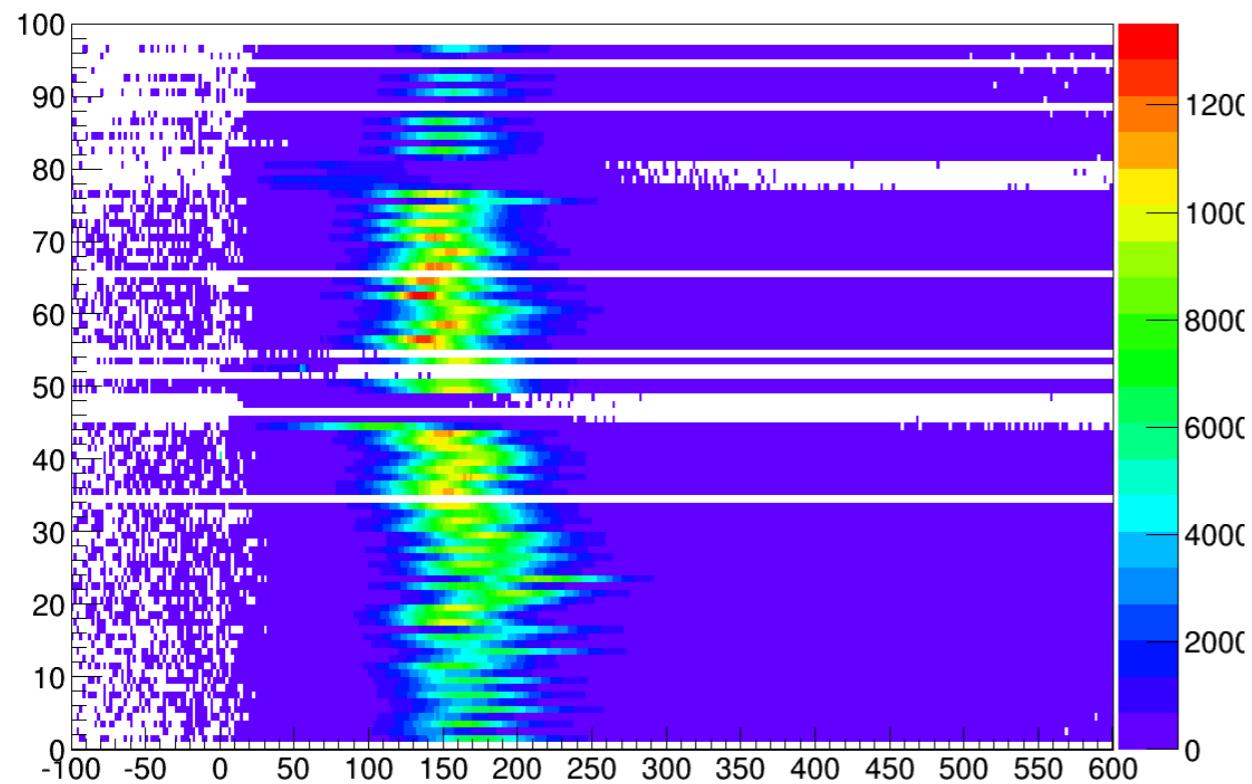

~ 12 hits per event

Drift times

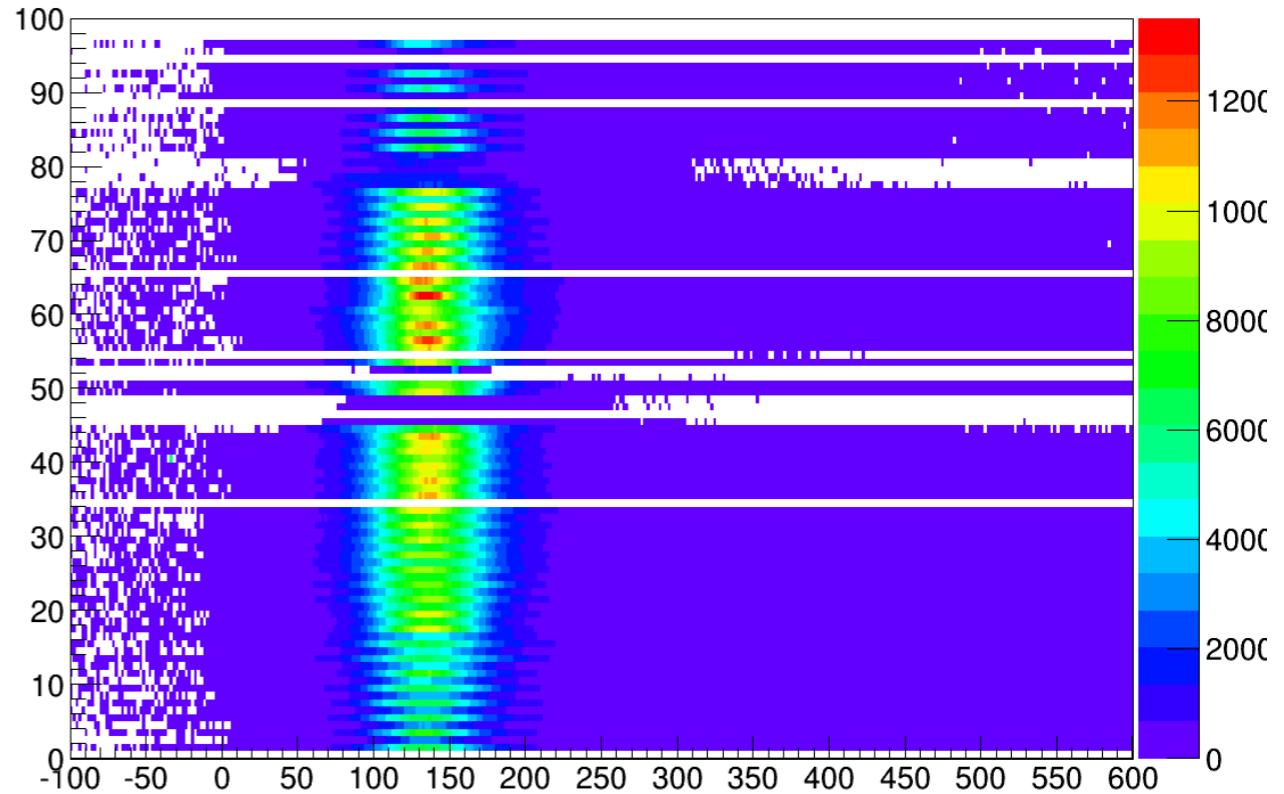

Drift times: ~160nsec

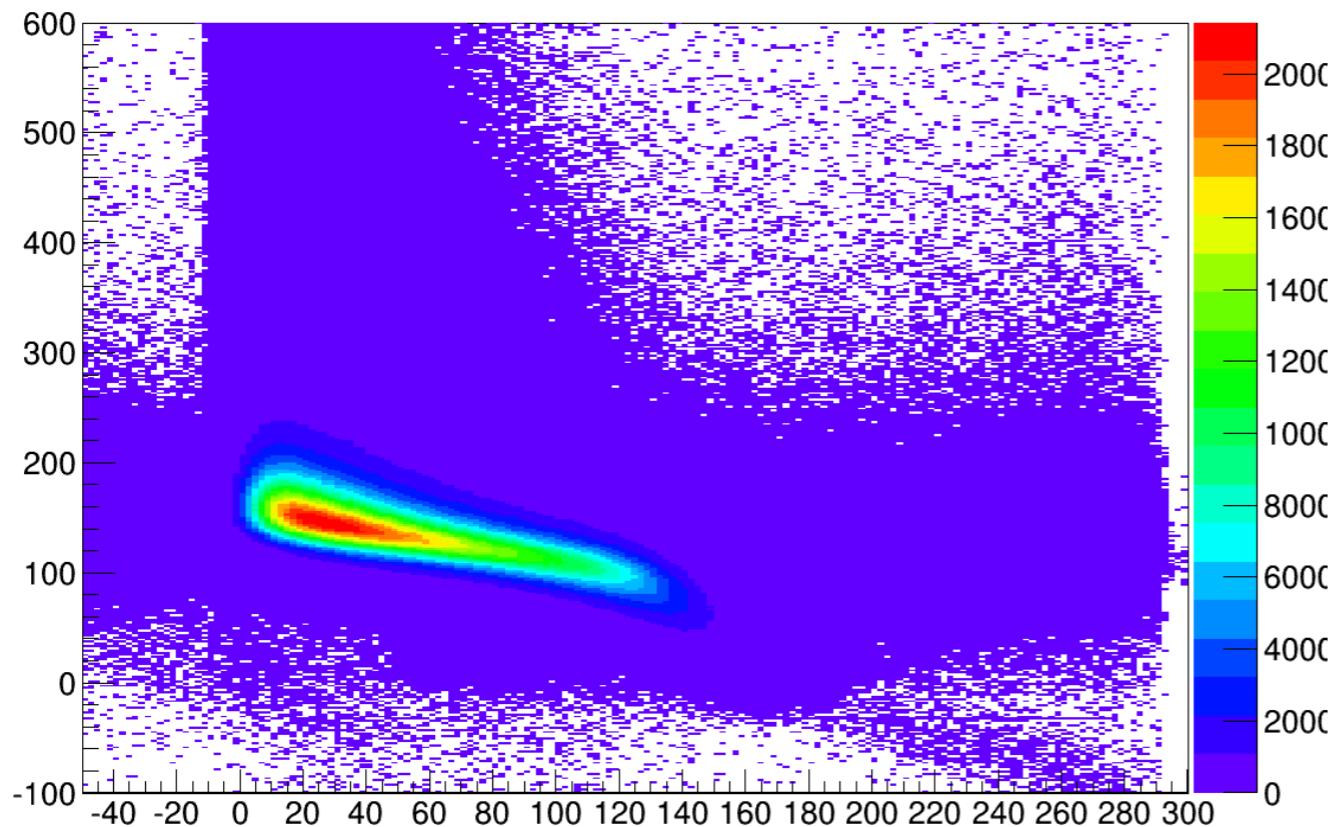

TOT time vs channel /wo correction

TOT time vs channel /w correction

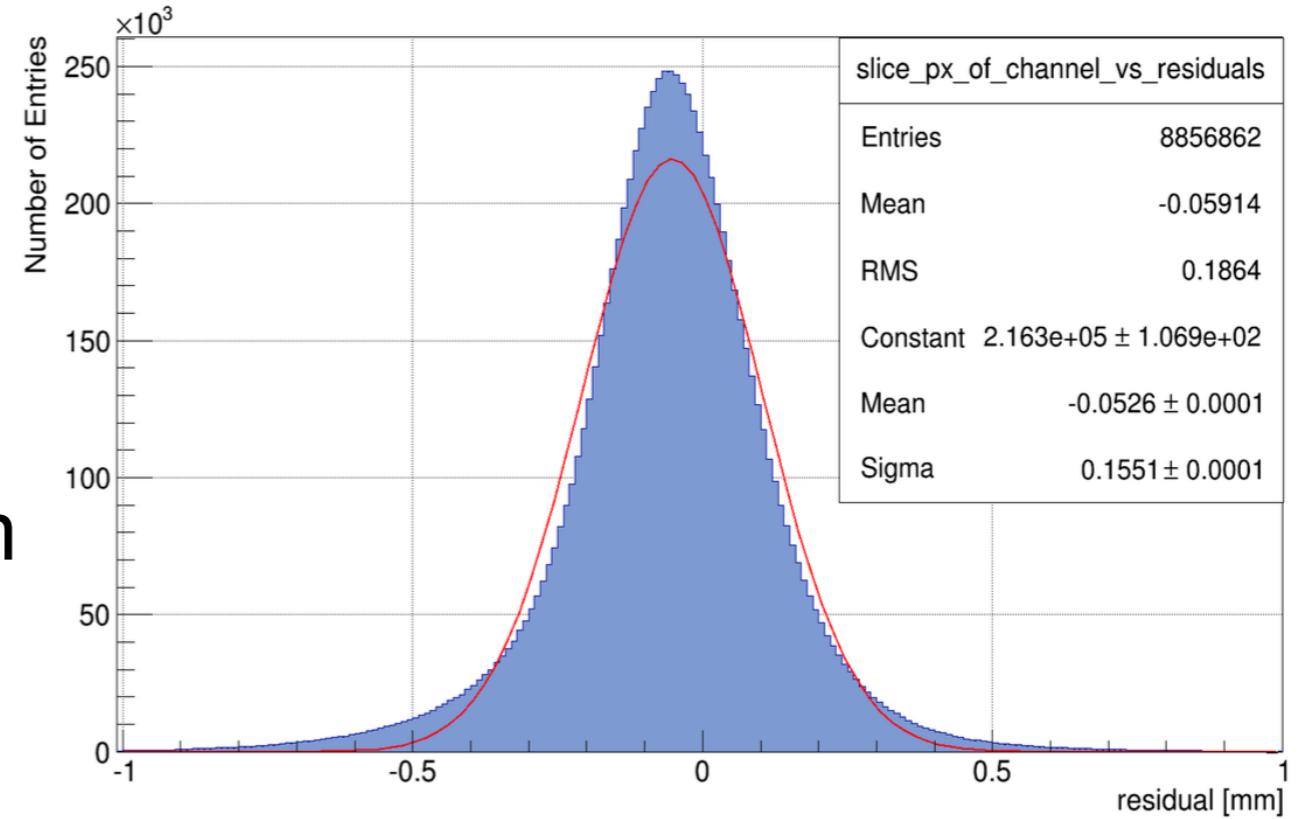

ToT vs. drift time

Few background hits

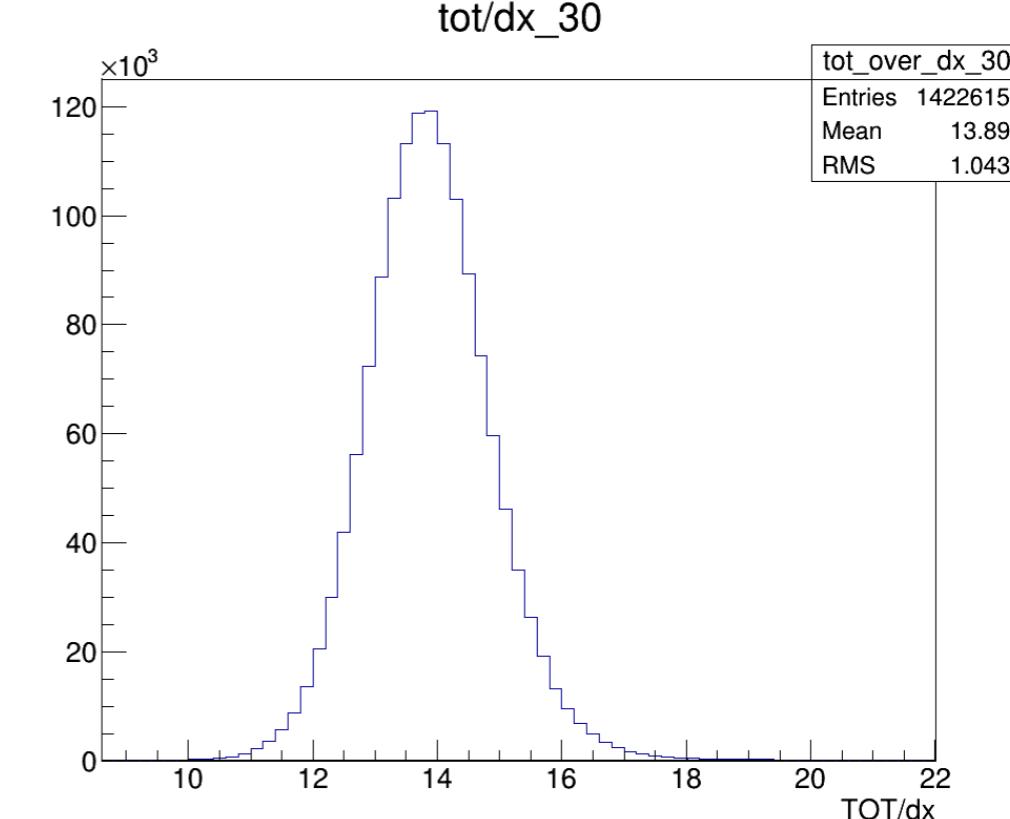

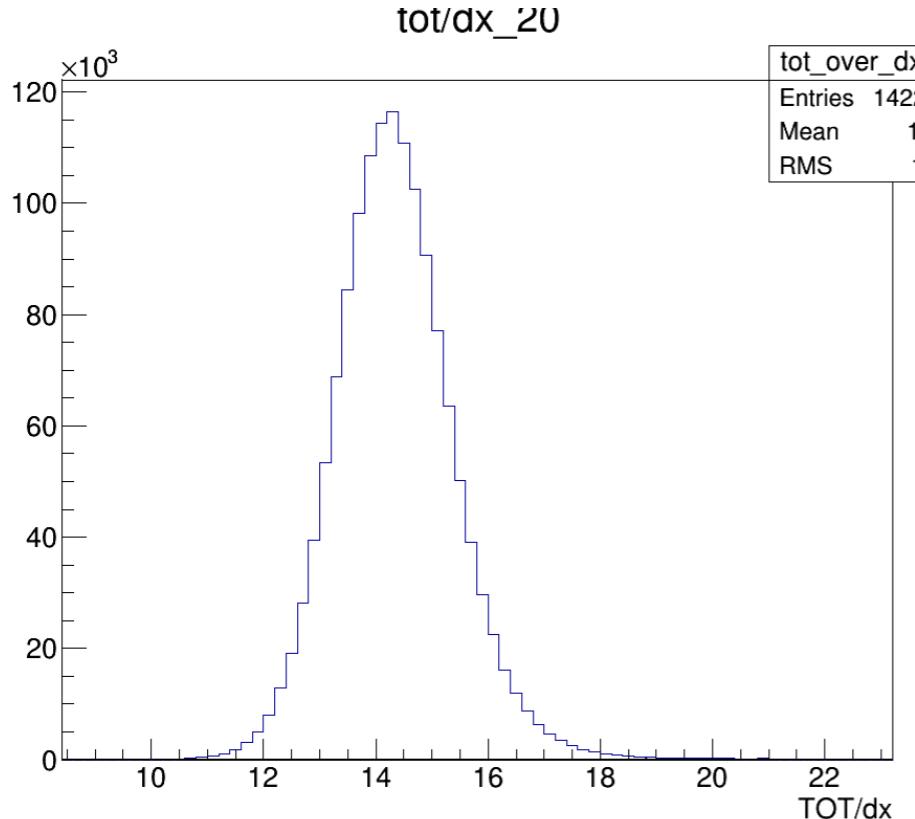

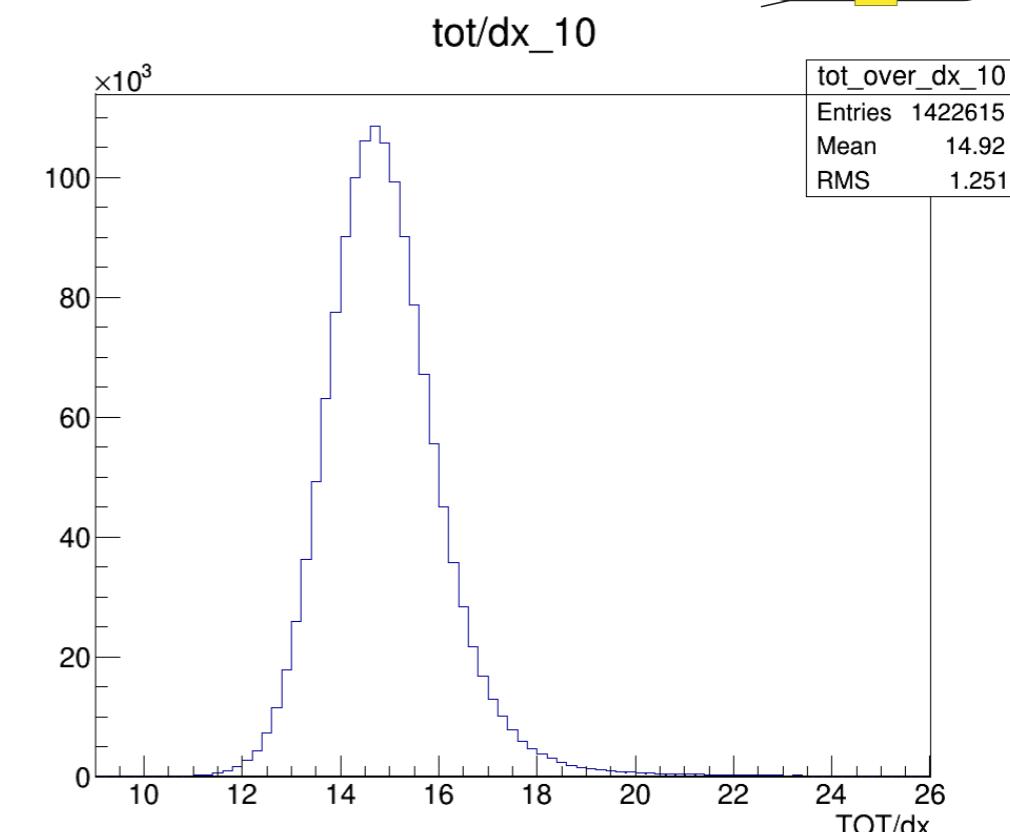

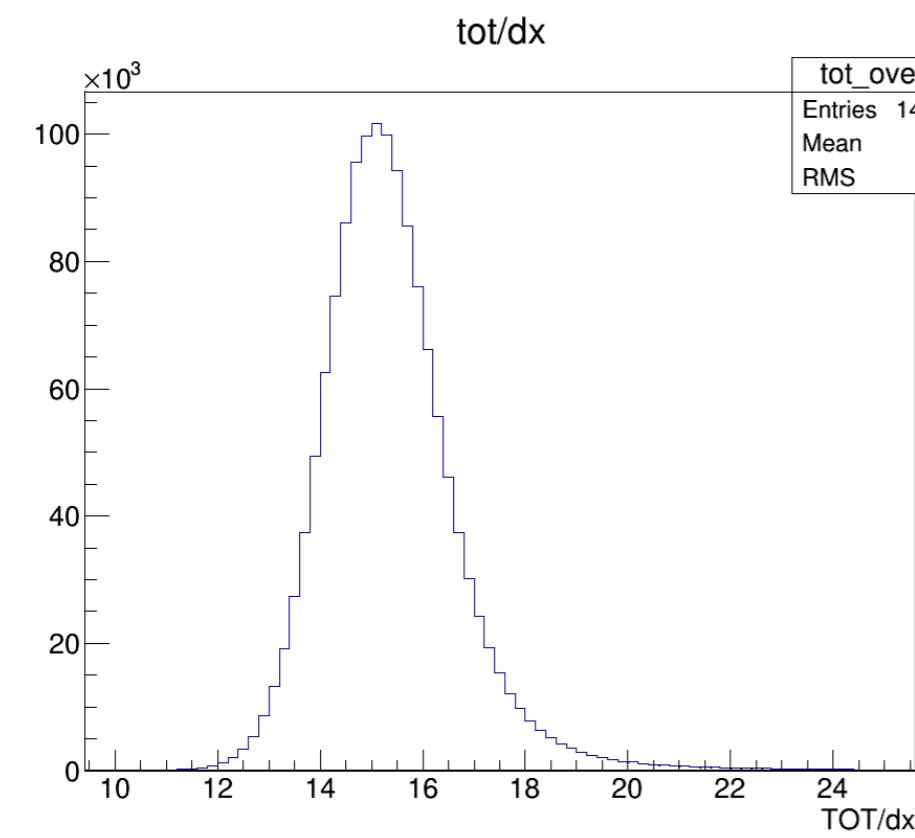

Spatial resolution:  $\sim 155 \mu\text{m}$

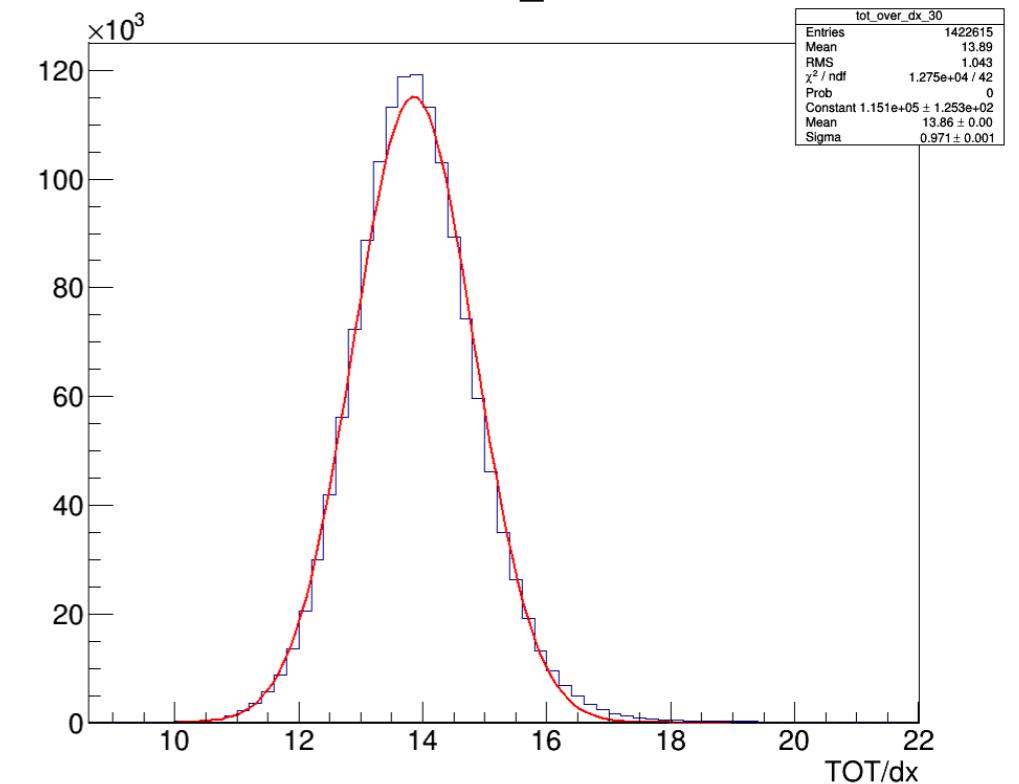

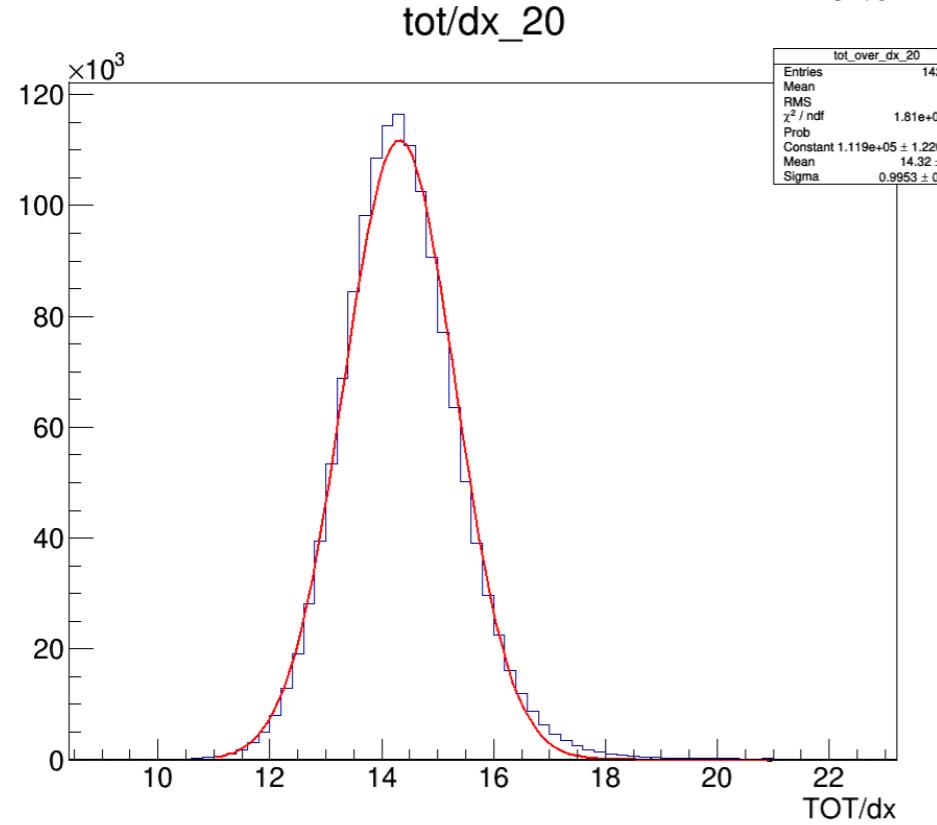

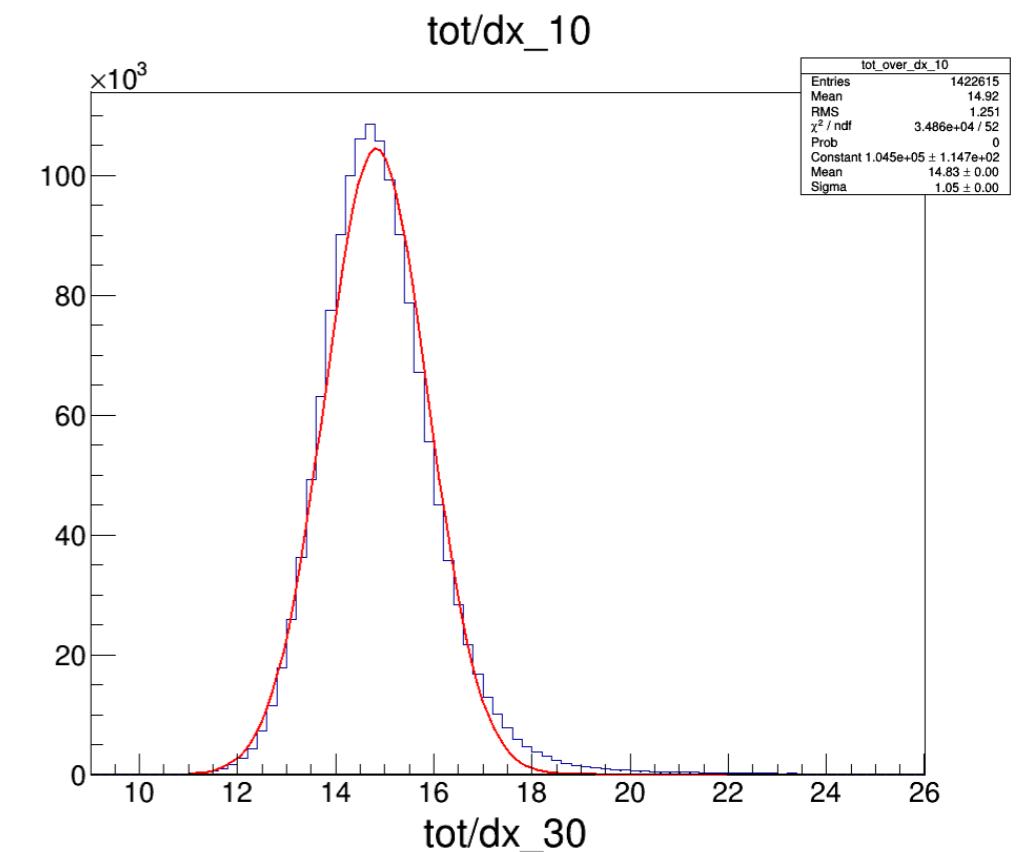

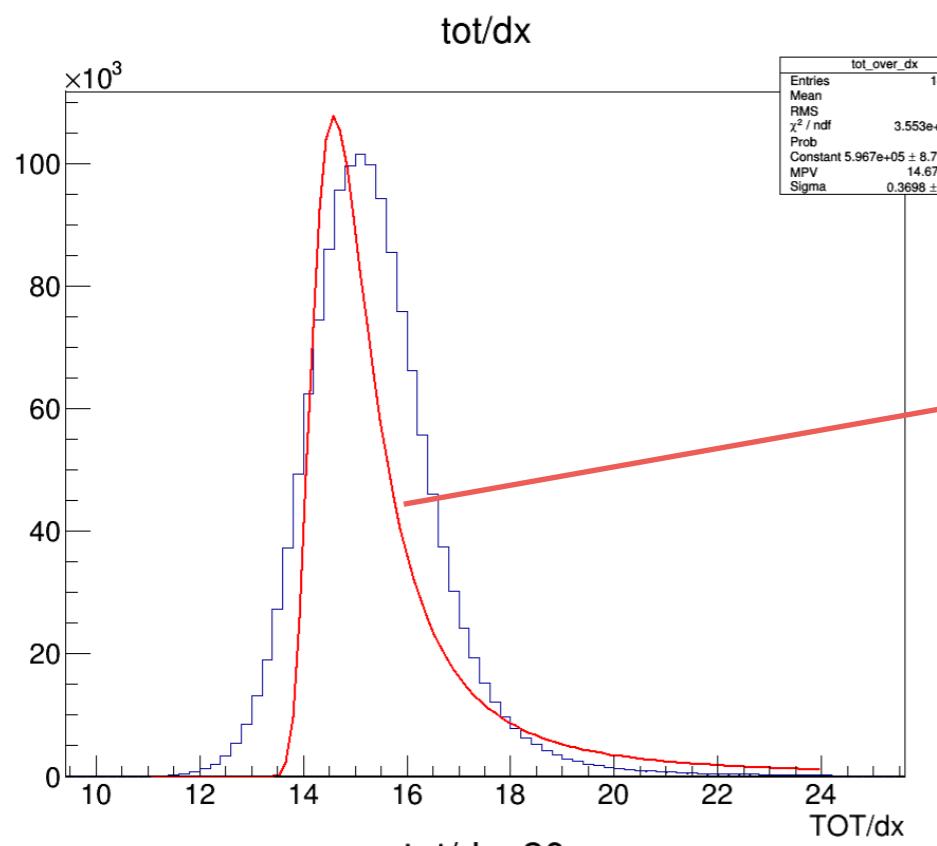

## Calculating TOT/dx and separation power

- Corrected TOT
- 1800 V
- For each event: calculate TOT/dx per hit and then, calculation of  $\Sigma_{\text{TOT}}/\Sigma_{\text{dx}}$  per event → Landau
- Depending on the truncation: remove hits with the largest TOT/dx values and then, calculation of  $\Sigma_{\text{TOT}}/\Sigma_{\text{dx}}$  per event → Gauss

# 2000 MeV/c

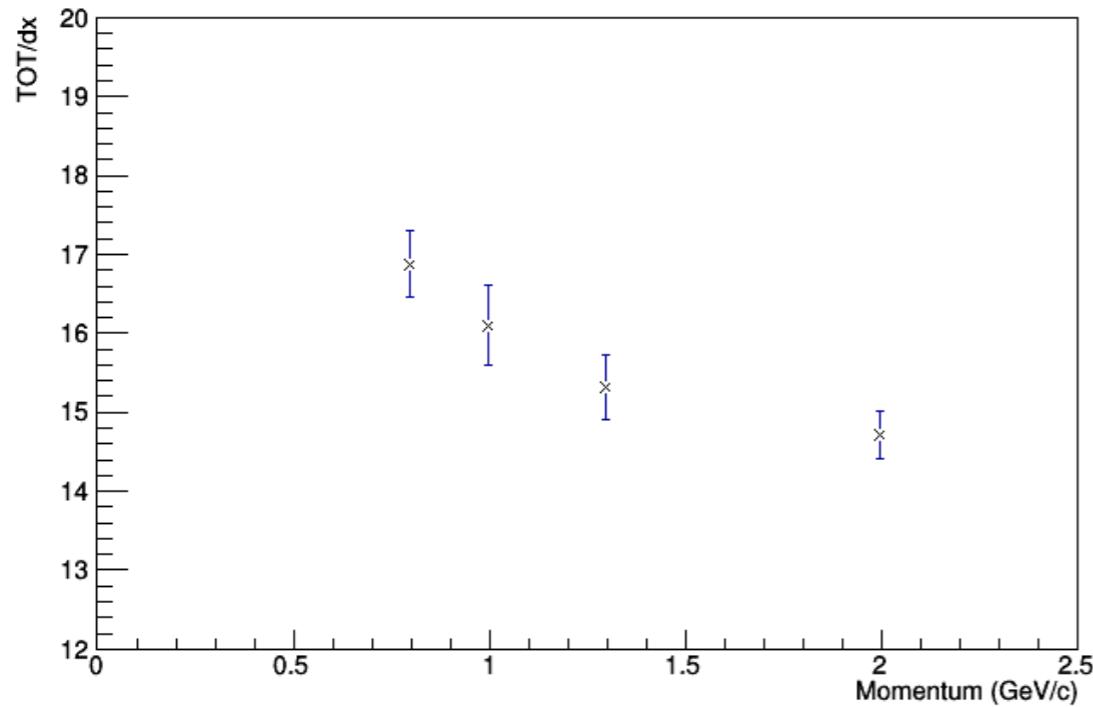

# 2000 MeV/c

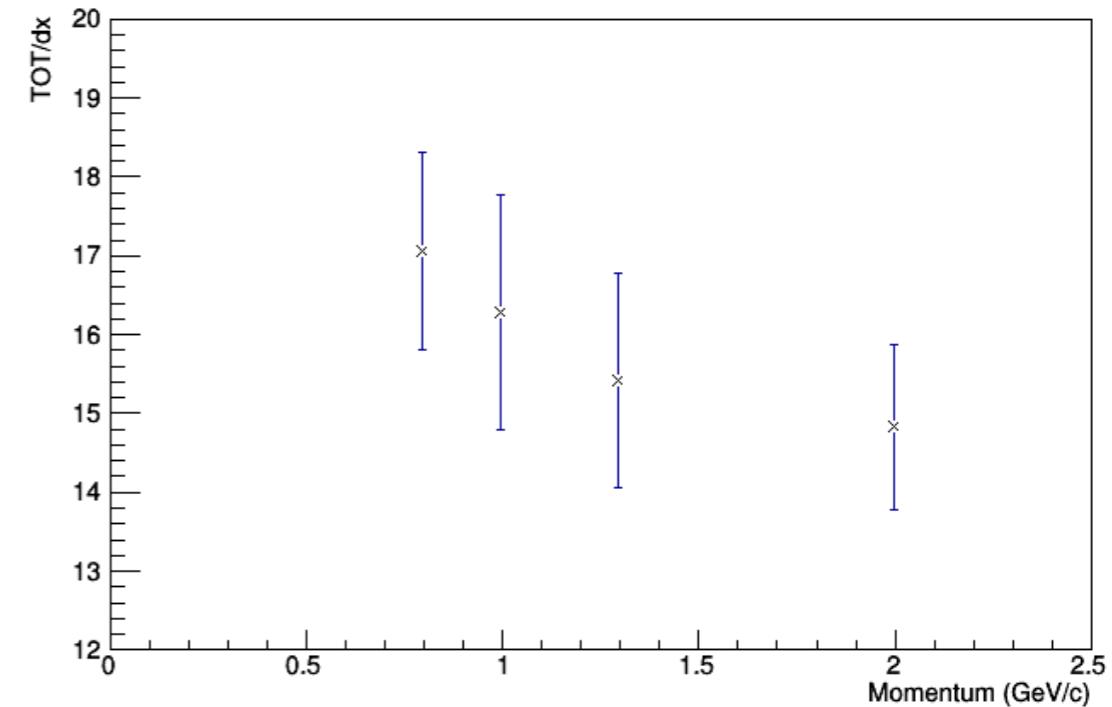

# $\langle \text{TOT}/\text{dx} \rangle$ vs momentum

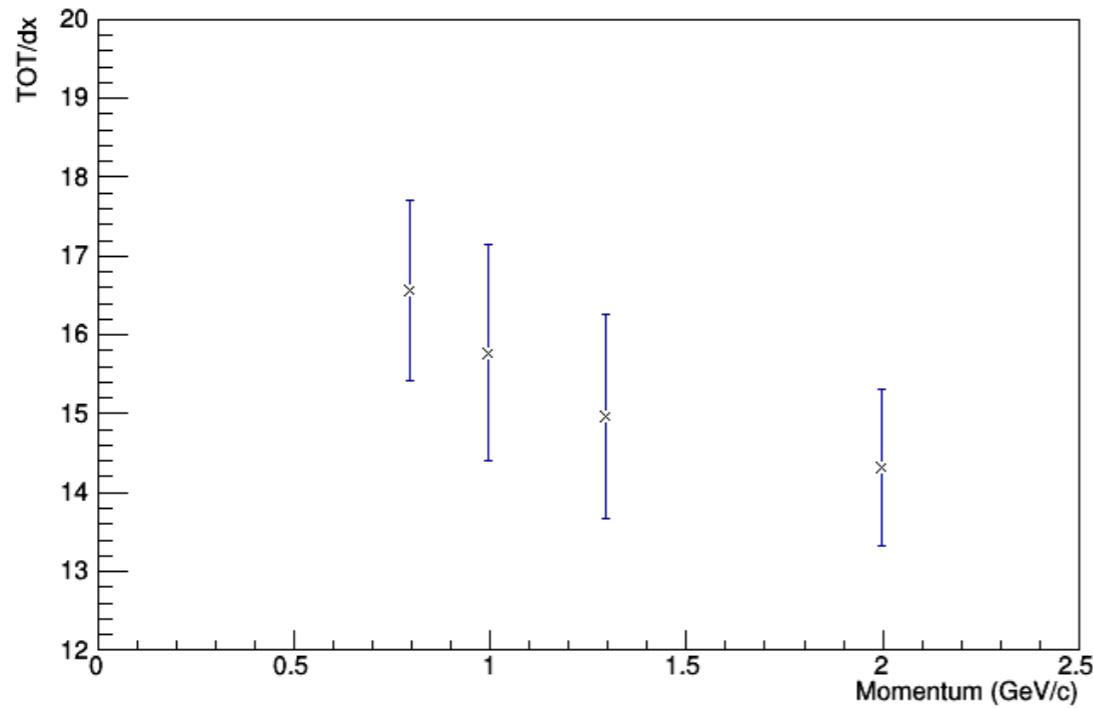

w/o truncation

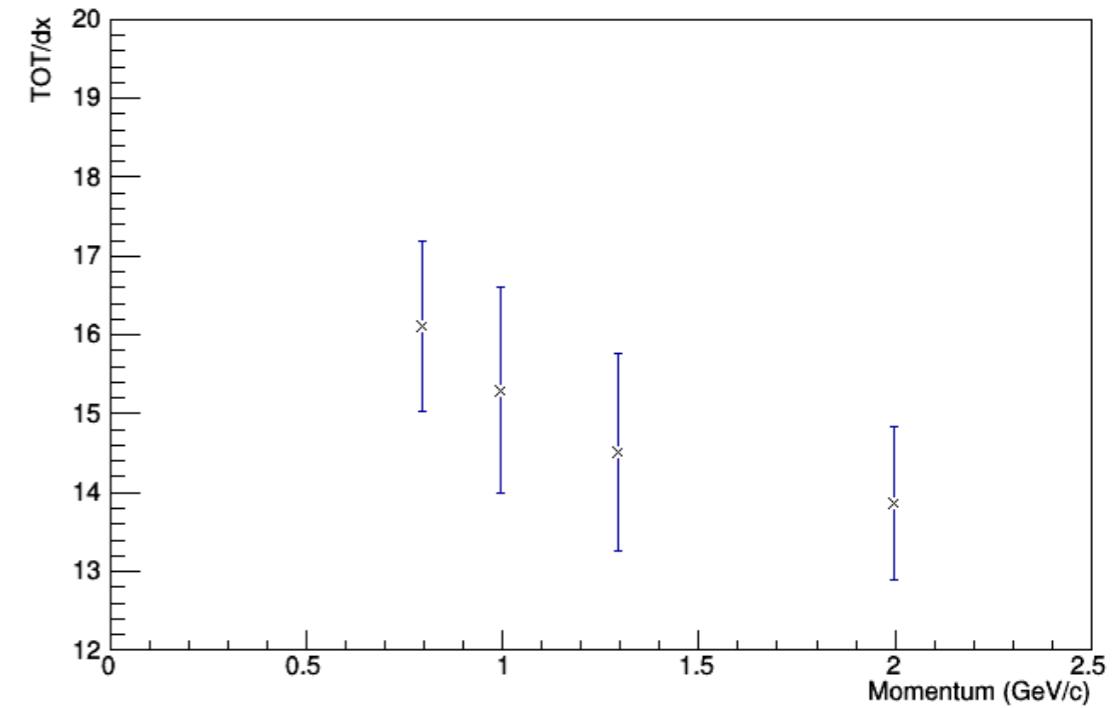

truncation 10%

truncation 20%

truncation 30%

## Summary table

Momentum (MeV/c)	800	1000	1300	2000
No truncation (landau)	$\mu = 16,88$ $\sigma = 0,43$ $\sigma/\mu = 2,55\%$	$\mu = 16,10$ $\sigma = 0,51$ $\sigma/\mu = 3,16\%$	$\mu = 15,32$ $\sigma = 0,42$ $\sigma/\mu = 2,74\%$	$\mu = 14,72$ $\sigma = 0,39$ $\sigma/\mu = 2,03\%$
10% truncation (gaus)	$\mu = 17,06$ $\sigma = 1,26$ $\sigma/\mu = 7,41\%$	$\mu = 16,28$ $\sigma = 1,48$ $\sigma/\mu = 7,24\%$	$\mu = 15,42$ $\sigma = 1,36$ $\sigma/\mu = 8,82\%$	$\mu = 14,83$ $\sigma = 1,05$ $\sigma/\mu = 7,08\%$
20% truncation (gaus)	$\mu = 16,56$ $\sigma = 1,15$ $\sigma/\mu = 6,95\%$	$\mu = 15,77$ $\sigma = 1,37$ $\sigma/\mu = 8,68\%$	$\mu = 14,96$ $\sigma = 1,29$ $\sigma/\mu = 8,62\%$	$\mu = 14,32$ $\sigma = 0,99$ $\sigma/\mu = 6,91\%$
30% truncation (gaus)	$\mu = 16,11$ $\sigma = 1,07$ $\sigma/\mu = 6,64\%$	$\mu = 15,30$ $\sigma = 1,31$ $\sigma/\mu = 8,56\%$	$\mu = 14,51$ $\sigma = 1,24$ $\sigma/\mu = 8,54\%$	$\mu = 13,86$ $\sigma = 0,97$ $\sigma/\mu = 6,99\%$

## Conclusions

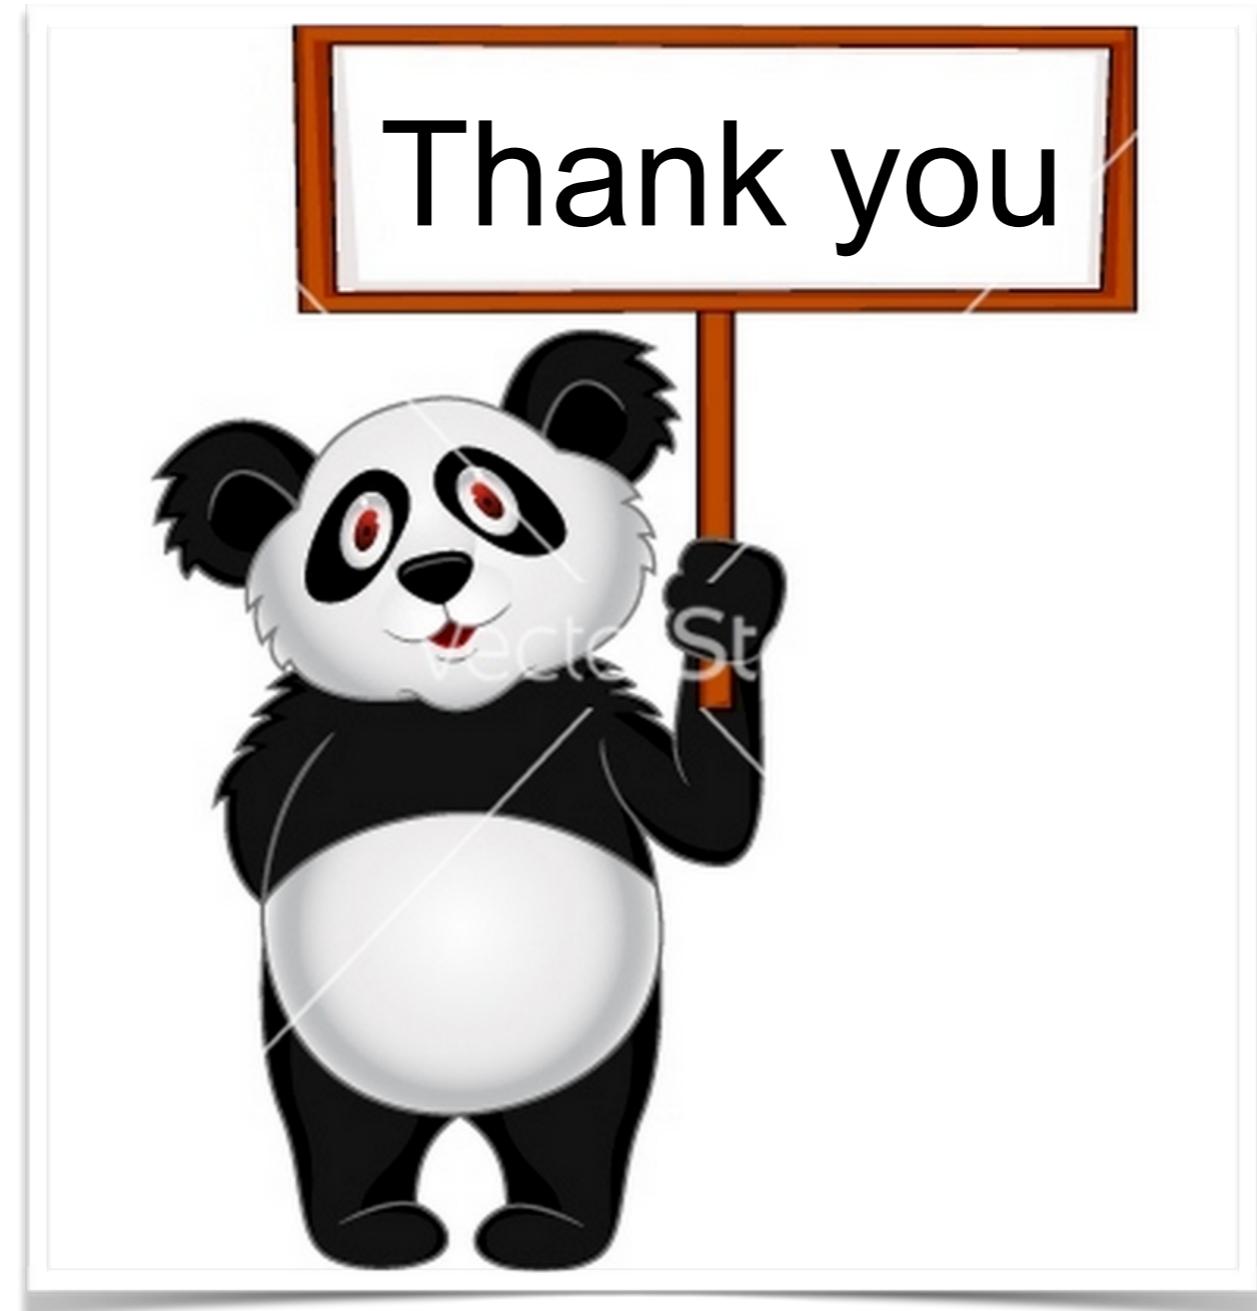

- Spatial resolution already at the goal value:  $\sim 155\mu\text{m}$
- Resolution is better than expected:  $\sim 7\text{-}8\%$
- Correlation of  $\langle \text{TOT}/\text{dx} \rangle$  and momentum
- Constrained by the number of channels which are hit  $\longrightarrow$  large errors

NEW DATA from beam-time in May!!!

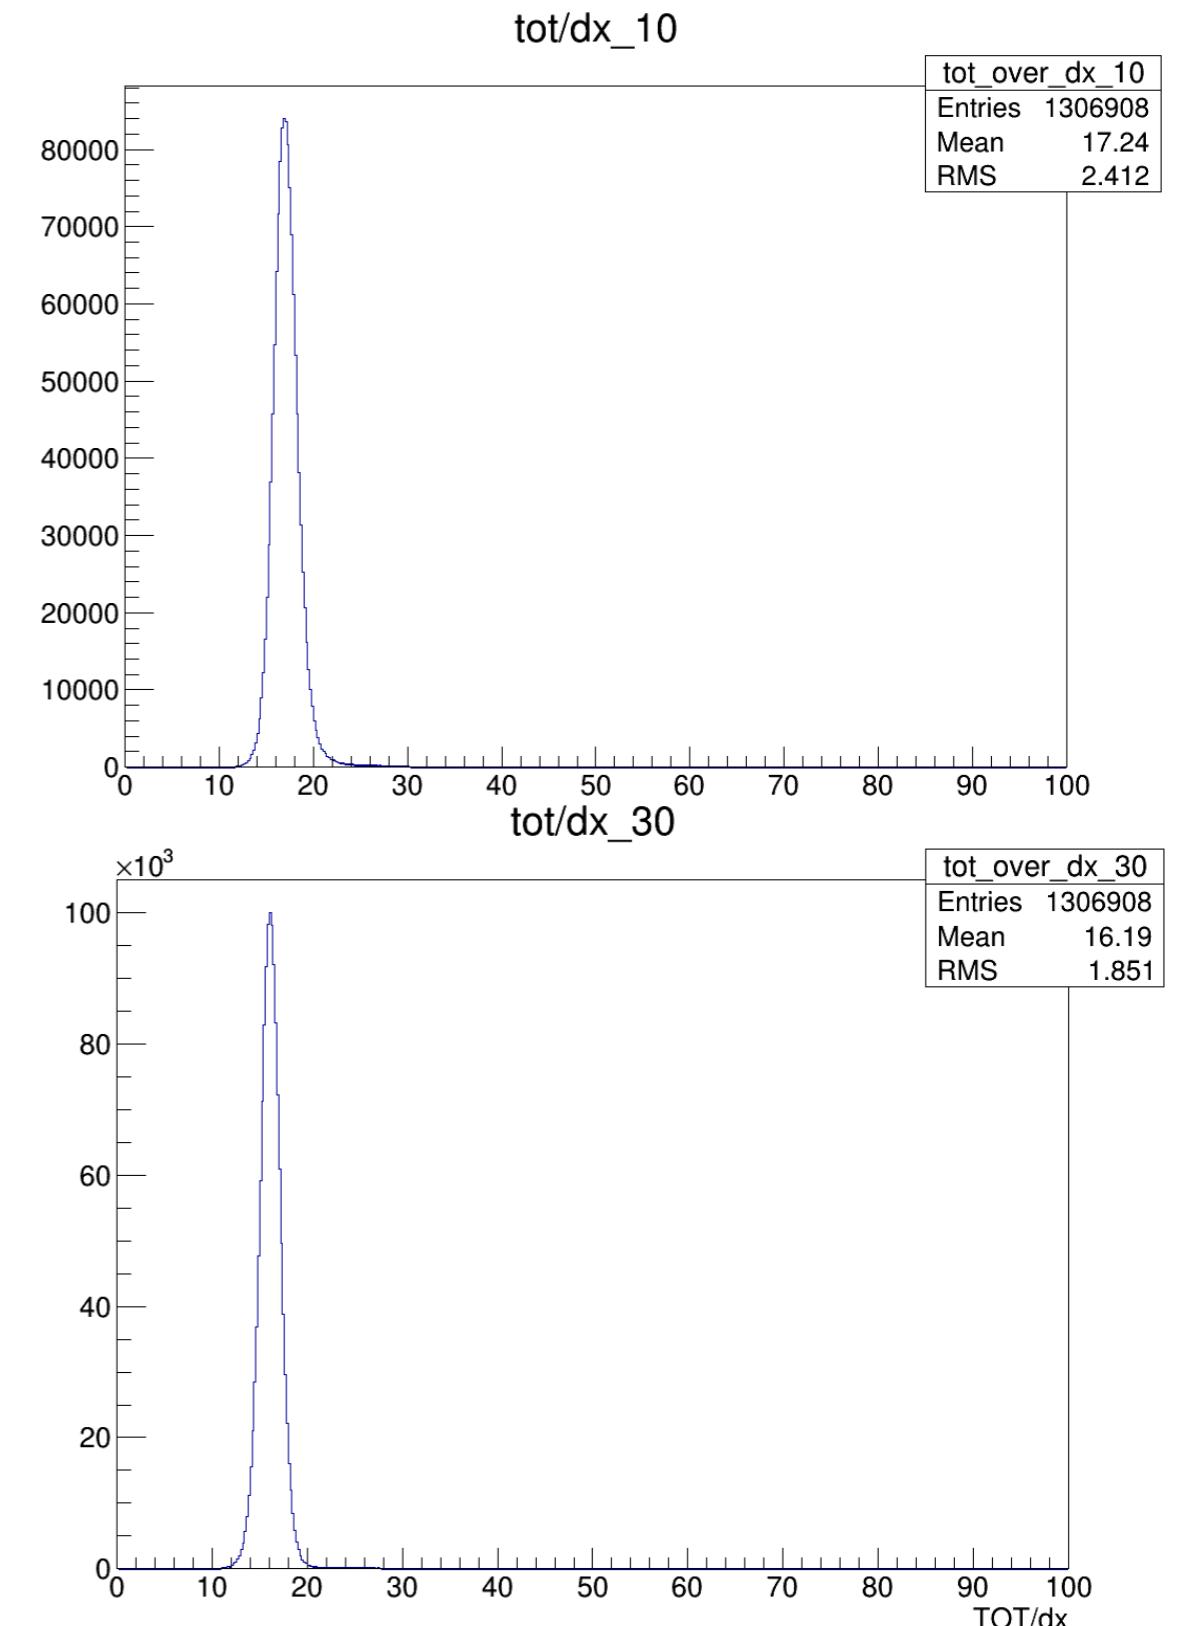

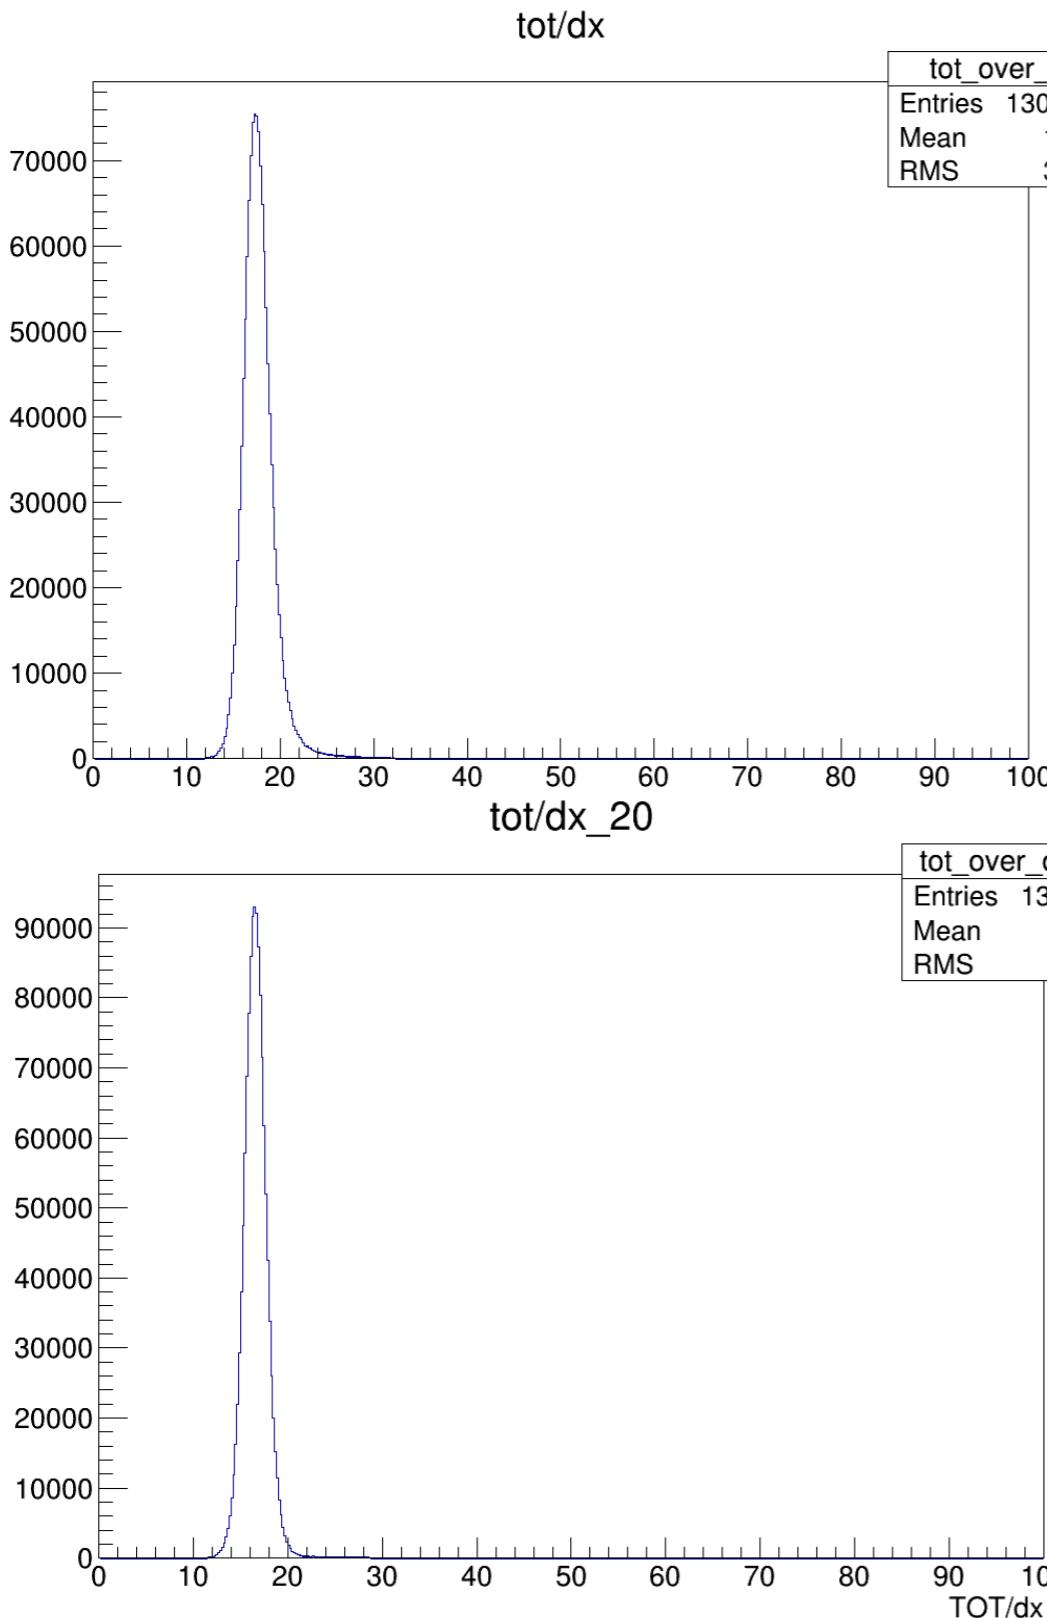

Both STT and FTT data : 0.6, 0.8, 2.95 GeV/c

\*\*\*\*\*STT  $\longrightarrow$  144 channels\*\*\*\*\*

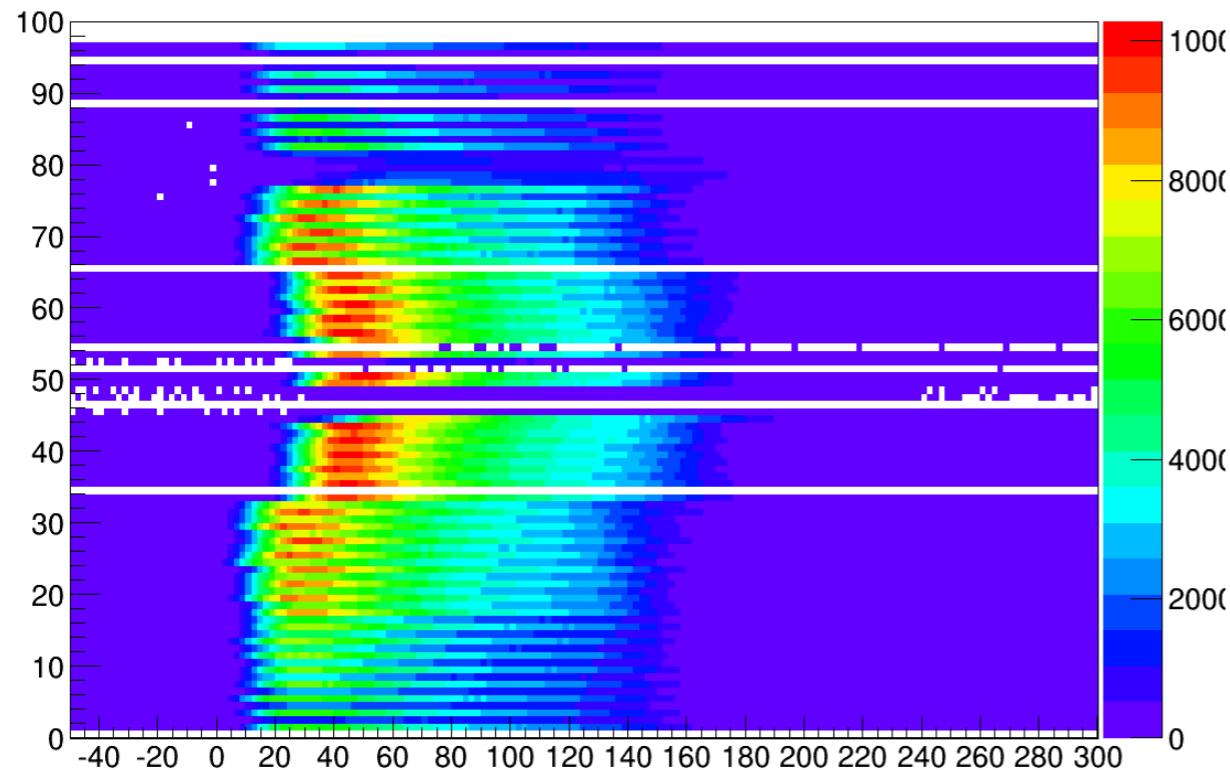

Work in progress...
