Luminosity Detector

- ▶ reconstruction of scattering angle distribution of elastic antiproton proton scattering
- ▶ four tracking layers of silicon pixel sensors
- ▶ 400 HV-MAPS in total

High Voltage Monolithic Active Pixel Sensors

- design I. Peric for Mu3e
- 180 nm AMS/IBM process
- bias voltage (≈ 60 V)
 - 14 μm depletion layer
 - fast charge collection
- radiation tolerant
- separately adjustable thresholds
- thickness below 50 μm

High Voltage Monolithic Active Pixel Sensors

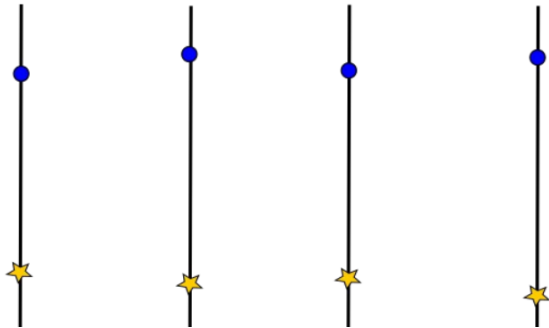

- ▶ size of $2 \times 2 \text{ cm}^2$ with $80 \times 80 \text{ }\mu\text{m}^2$ pixels
- ▶ digital part on one chip side, active area $> 90\%$
- ▶ time stamp up to 40 MHz
- ▶ LVDS-Link @ 400-800 Mbps

LMD DAQ Scheme

- Data stream from MuPix via LVDS links
- Slow Control via SPI like bus
- ~ 20 MuPix per TRB
- Hitmerging on TRBs(?)
- Data stream to Stratix V development kit via optical links
- Stratix V development kit used already by Mu3e group (reuse firmware)
- Data stream to PC via PCIe
- Nvidia GTX 980 Ti for tracking (CUDA)

Cellular Automaton

- Raw data

Cellular Automaton

- Raw data
- Create cells

Cellular Automaton

- Raw data
- Create cells
- Calculate angles

Cellular Automaton

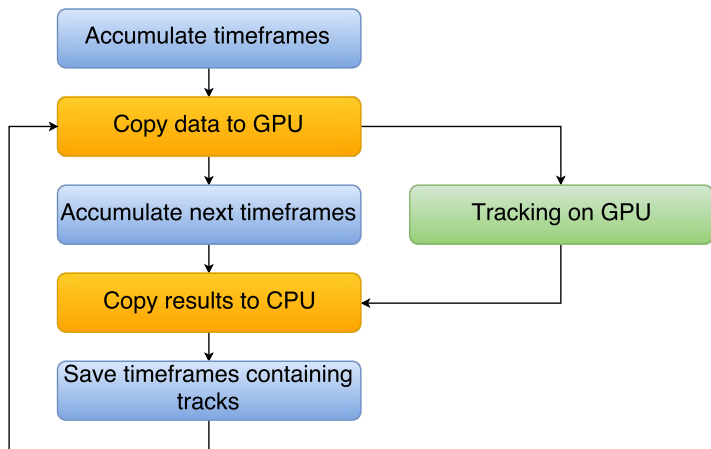

- Raw data
- Create cells
- Calculate angles

Cellular Automaton

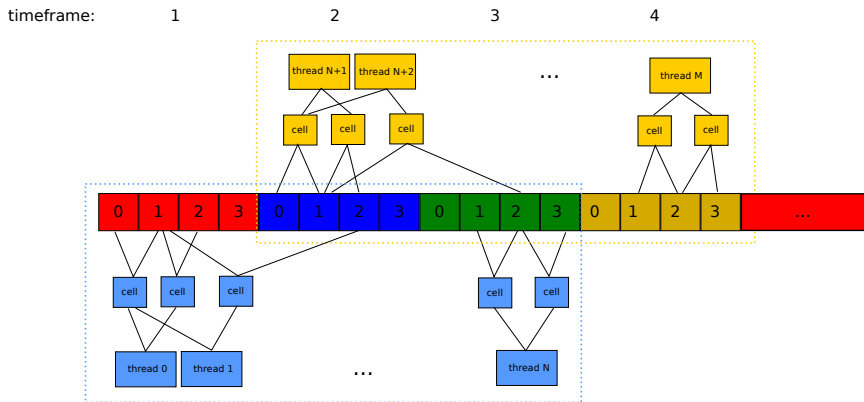

- Raw data
- Create cells
- Calculate angles
- find neighboring cell chains

Tracking Scheme

GPU Tracking

- Tracking for N timeframes simultaneously
- Track data in up to 3 timeframes
- Calculate angles for combinations in frame group
- Tracks must include hit in first frame of frame group

Future Tasks

- add SODANET superburst information to timestamps
- measure delay from SODANET source to FEE
- integrate Stratix V development kit
- complete GPU tracking code/daq software
- determine tracking latency

Open Questions

- Does someone need track information for triggering?
- How fast do you need it?
- How often is online Luminosity needed?
- Is our "Trigger-PC" already a Compute Node in the PANDA DAQ sense?
