

## Precision study of the E2 spectrum of the hydrogen molecular ion $H_2^+$

*Tuesday, 12 September 2017 16:40 (20 minutes)*

The electric quadrupole E2 spectrum of the hydrogen molecular ion  $H_2^+$  is considered in details. The dependence on the laser polarization and the sensitivity to external magnetic fields is thoroughly studied with full account of the hyperfine structure of the molecular ion.

**Primary author:** Prof. BAKALOV, Dimitar (Institute for Nuclear Research and Nuclear Energy, Bulgarian Academy of Sciences)

**Co-authors:** Mr DANEV, Petar (Institute for Nuclear Research and Nuclear Energy, Bulgarian Academy of Sciences); Prof. SCHILLER, Stephan (Institut für Experimentalphysik, Heinrich-Heine-Universität Düsseldorf); Dr KOROBOV, Vladimir (Joint Institute for Nuclear Research)

**Presenter:** Prof. BAKALOV, Dimitar (Institute for Nuclear Research and Nuclear Energy, Bulgarian Academy of Sciences)

**Session Classification:** Parallel P1 & P2

**Track Classification:** Leptonic atoms: QED and gravity
