

## **Belle studies of exotic hadrons with heavy flavors**

*Thursday, 14 September 2017 15:00 (30 minutes)*

Exploiting the world highest luminosity electron-positron collision data provided by the KEKB collider, Belle experiment has brought many interesting results on the exotic hadrons with heavy flavors. Striking discoveries as well as variety of studies to reveal properties of those exotic states are reviewed and still possible extensions of the relevant activities are discussed.
