Analysis steps of the s021 experiment focused on the fluorine region

Thursday, 10 August 2017 14:00 (30 minutes)

I propose to present some calibration steps of the s021 experiment and possibly some preliminary results depending on the advances that will be made before the workshop. So far the calibrations for NeuLAND, NEBULA, BDCs, FDCs have been done and the calibrations for the HOD are in progress. If available, I will present the preliminary results for the structure of the ^{28}F populated from both the ^{29}F and the ^{29}Ne .
