RIKEN, 18.06.10

# Island of inversion at N=20

- reduction of  $f_{7/2} - d_{3/2}$  N=20 gap  
emptying the  $d_{5/2}$  proton orbital

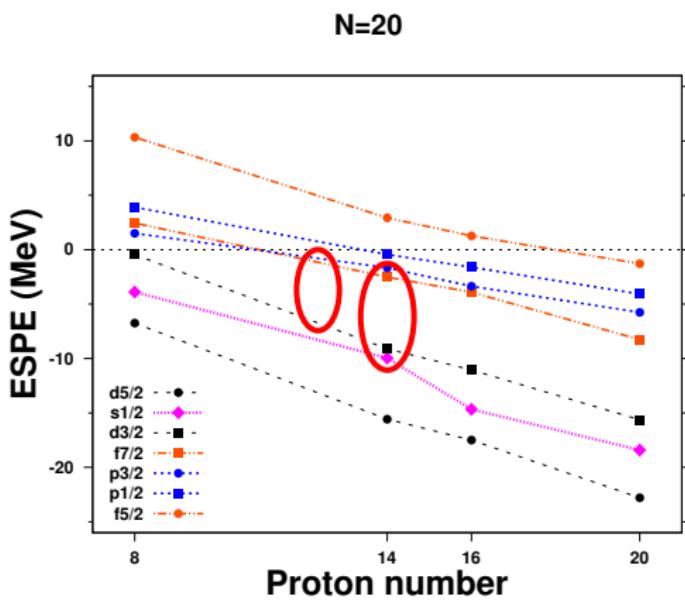

N=20

- crossing of  $f_{7/2}$  and  $p_{3/2}$  when emptying the  $d_{5/2}$  neutron orbital

“Island of deformation”  
around A=32

# Island of inversion at N=20

- reduction of  $f_{7/2} - d_{3/2}$  N=20 gap  
emptying the  $d_{5/2}$  proton orbital

- crossing of  $f_{7/2}$  and  $p_{3/2}$  when emptying the  $d_{5/2}$  neutron orbital

$^{32}\text{Mg}$

# What do we know about N=40?

- N=40 closure:  $2^+$  state of  $^{68}\text{Ni}$  at 2 MeV,  $B(E2)=52 \text{ e}^2\text{fm}^4$   
*O. Sorlin et al., Phys.Rev.Lett.88 (2002) 092501.*
- Enhanced collectivity in  $^{64}\text{Fe}$ :  
 $B(E2) = 470 \pm_{110}^{210} \text{e}^2\text{fm}^4$   
*J. Ljungvall et al., PRC81 (2010) 061301(R).*
- Recent measurement of excited states in  $^{64}\text{Cr}$ :  $2^+$  at 420(7)keV  
*A. Gade et al., Phys.Rev. C81 (2010) 051304.*
- SM study of  $^{68}\text{Ni}$ : 50% of shell closure, pair excitations across the N=40 gap  
*O. Sorlin et al., Phys.Rev.Lett.88 (2002) 092501.*
- Collectivity at N=40:  
-HFB-Gogny+GCM  
*L. Gaudefroy et al., Phys.Rev. C80 (2009) 064313.*
  - SM with an empirical interaction in *pfg* space
  - K. Kaneko et al., Phys.Rev.C78 (2008) 064312.*
  - SM with realistic-compatible interaction in *pfgd* space
  - E. Caurier et al., EPJ A15 (2002) 145.*

# SM framework

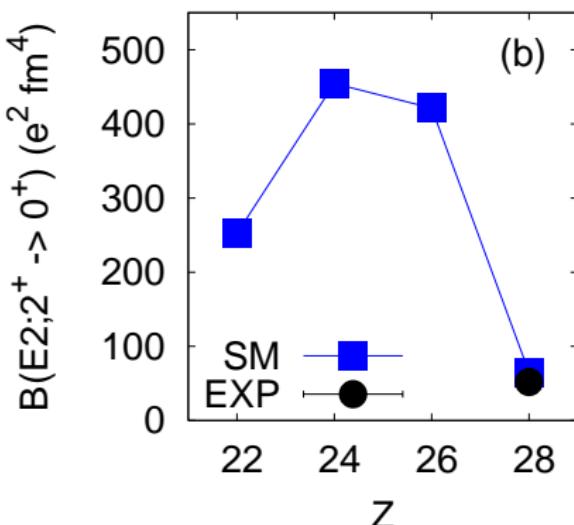

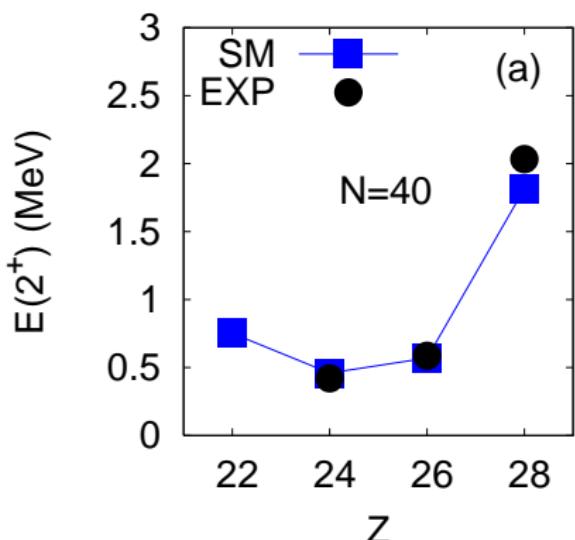

## LNPS interaction:

- based on realistic TBME
- new fit of the pf shell
- monopole corrections

## Calculations:

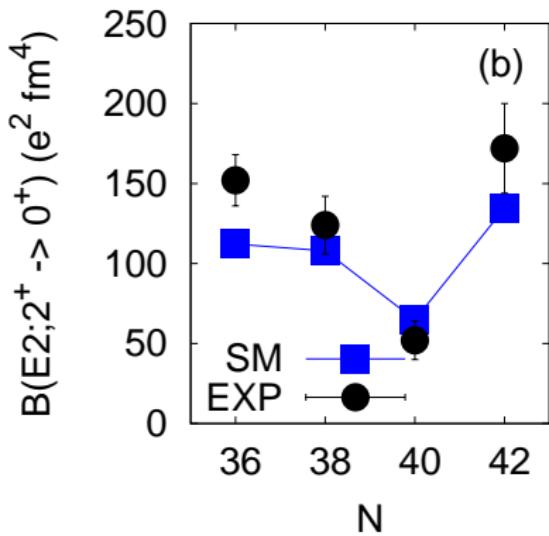

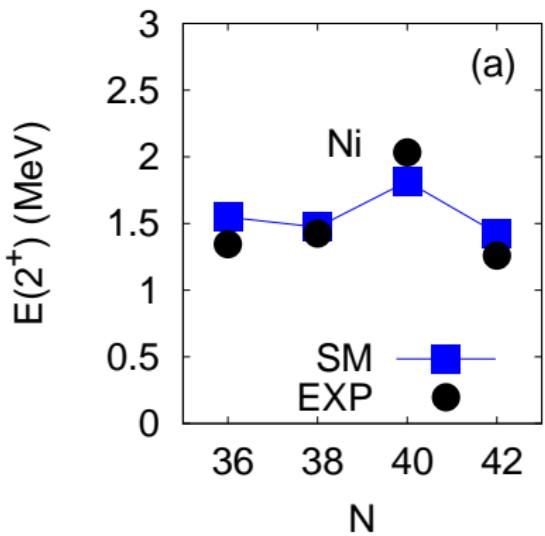

- up to 14p-14h excitations across  $Z=28$  and  $N=40$  gaps
- up to  $7 \cdot 10^9$
- m-scheme code ANTOINE

# Shape change at N=40

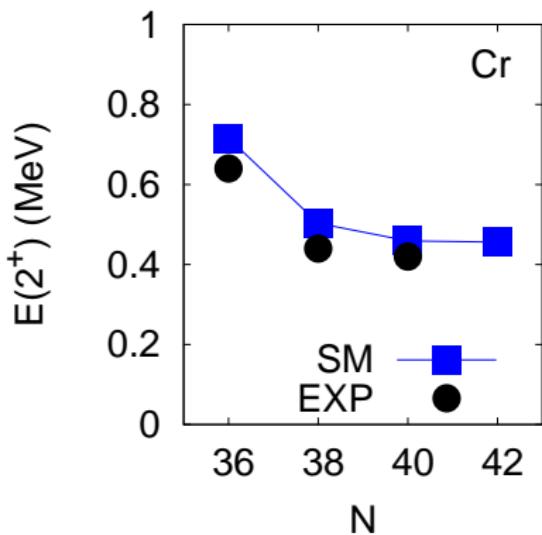

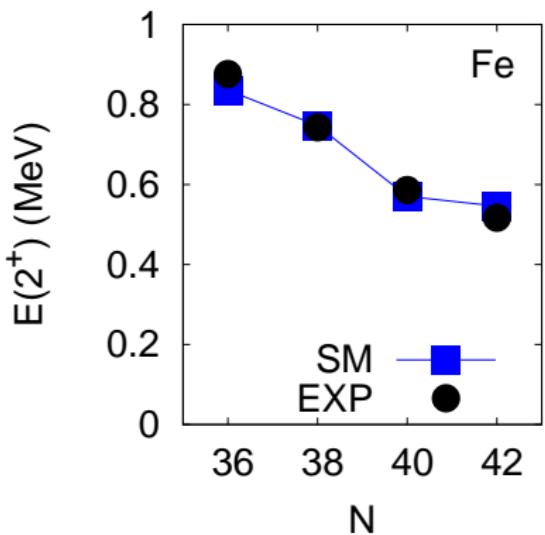

Nucleus	$\nu g_{9/2}$	$\nu d_{5/2}$	configuration

# Neutron effective single particle energies

- reduction of the  $\nu d_{3/2}$ - $f_{7/2}$  gap with removing  $d_{5/2}$  protons
- proximity of the quasi-SU3 partner  $p_{3/2}$

# Neutron effective single particle energies

- reduction of the  $\nu d_{3/2}$ - $f_{7/2}$  gap with removing  $d_{5/2}$  protons
- proximity of the quasi-SU3 partner  $p_{3/2}$
- reduction of the  $\nu f_{5/2}$ - $g_{9/2}$  gap with removing  $f_{7/2}$  protons
- proximity of the quasi-SU3 partner  $d_{5/2}$

# Conclusions

- Deformation develops below  $^{68}\text{Ni}$  in analogy to **the island of inversion at  $N = 20$ .**
- SM predictions using large valence space  $pf$  for protons and  $f_{5/2}pg_{9/2}d_{5/2}$  for neutrons and LNPS interaction fit well known experimental data **in both, spherical and deformed systems.**
- More experimental input in the region is welcome, especially  **$B(E2)$  rates can be crucial** for mapping the new land of deformation below  $^{68}\text{Ni}$ .
